So your normal life will not be disturbed. Please witness your growth after the professional guidance of our F5CAB4 Study Materials. In short, our F5CAB4 real exam will bring good luck to your life.

F5 BIG-IP Administration Control Plane Administration Sample Questions (Q35-Q40):

NEW QUESTION # 35

A configuration change is made on the standby member of a device group. What is displayed as "Recommended Action" on the Device Management Overview screen?

- A. Activate device with the most recent configuration
- B. Synchronize the active member configuration to the group.
- C. Synchronize the standby member configuration to the group
- D. Force active member of device group to standby

Answer: C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: The BIG-IP Control Plane monitors the "Commit ID" of the configuration on all group members. When a change is made on the Standby unit, it becomes the member with the most recent configuration. The "Recommended Action" in the HA status dashboard will be to synchronize that specific device's configuration to the rest of the group to ensure consistency

NEW QUESTION # 36

A BIG-IP Administrator is setting up a new BIG-IP device. The network administrator reports that the interface has an incompatible media speed. The BIG-IP Administrator needs to change this setting manually. From which location should the BIG-IP Administrator perform this task?14

- A. In the Configuration Utility, Network > Interface17
- B. In the Configuration Utility, System> Configuration18
- C. In the TMOS Shell Command line16
- D. On the Front Console15

Answer: A

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration20 Control Plane Administration documents: Connectivity management involves ensuring that the physical layer matches the networking environment. Interface properties, including media speed, duplex settings, and MTU, are managed at the Control Plane level under the Network menu. To resolve a mismatch with an upstream switch, the administrator must navigate to Network > Interfaces to manually override auto-negotiation settings.

NEW QUESTION # 37

A BIG-IP Administrator needs to fail over the active device. The administrator logs into the Configuration Utility and navigates to Device Management > Traffic Group. However, "Force to Standby" is greyed out. What is causing this issue?

- A. The BIG-IP Administrator is on the Standby Device
- B. The BIG-IP Administrator is logged in as root
- C. The BIG-IP Administrator is logged in as administrator
- D. The BIG-IP Administrator is NOT logged into command line to fail over

Answer: A

Explanation:

In a High Availability pair, the "Force to Standby" action is a Control Plane command used to trigger a manual failover. This option is only logical and available on the device that is currently in the Active state. If the button is greyed out, it indicates that the administrator is already logged into the Standby unit, which has no active traffic groups to relinquish.

NEW QUESTION # 38

A BIG-IP Administrator is unable to connect to the management interface via HTTPS. What is a possible reason for this issue?

- A. The IP address of the device used to access the management interface is NOT included in the "P Allow" list in the Configuration Utility.
- B. The port lockdown setting is configured to Allow None.
- C. An incorrect management route is specified.
- D. The IP address of the device used to access the management interface is NOT included in the "https Allow" list in the CLI.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Management connectivity is protected by an allowed access list for the httpd daemon. Unlike TMM data ports which use 'Port Lockdown' settings, the management port's access is controlled by a specific 'Allow' list. If an administrator's IP is not explicitly included in this list, the Control Plane will reject HTTPS connection attempts to the management utility.

NEW QUESTION # 39

A BIG-IP Administrator needs to view the CPU utilization of a particular Virtual Server. Which section of the Configuration Utility should the administrator use for this purpose?

- A. Statistics > Module Statistics > Traffic Summary
- B. Statistics > Module Statistics > Local Traffic > Virtual Addresses
- C. Statistics > Module Statistics > Local Traffic > Virtual Servers
- D. Statistics > Analytics > Process CPU Utilization

Answer: C

Explanation:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Monitoring specific object health is a core function of the Control Plane. While the dashboard provides a global overview, granular performance data-such as the CPU overhead a specific Virtual Server is placing on the Traffic Management Microkernel (TMM)-is found under the Module Statistics. Navigating to Statistics > Module Statistics > Local Traffic > Virtual Servers allows an administrator to report on the current status and resource consumption of individual traffic objects.

NEW QUESTION # 40

.....

In order to facilitate the wide variety of users' needs the F5CAB4 study guide have developed three models with the highest application rate in the present - PDF, software and online. Online mode of another name is App of study materials, it is developed on the basis of a web browser, as long as the user terminals on the browser, can realize the application which has applied by the F5CAB4 simulating materials of this learning model, users only need to open the App link, you can quickly open the learning content in real time in the ways of the F5CAB4 study materials.
