## MB-335 Actual Tests, Exam MB-335 Objectives Pdf

All the itPass4sure Microsoft MB-335 practice questions are real and based on actual Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) exam topics. The web-based Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) practice test is compatible with all operating systems like Mac, IOS, Android, and Windows. Because of its browser-based Microsoft MB-335 Practice Exam, it requires no installation to proceed further. Similarly, Chrome, IE, Firefox, Opera, Safari, and all the major browsers support the Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert (MB-335) practice test.

The MB-335 certification exam covers a range of topics, including supply chain planning, inventory management, procurement and sourcing, and warehouse management. MB-335 exam evaluates the candidate's ability to implement these processes effectively using Dynamics 365. Candidates are expected to have a deep understanding of the features and functionality of Dynamics 365, as well as the ability to configure the system to meet specific business requirements. Successful candidates will also demonstrate knowledge of

industry best practices and be able to apply them to optimize supply chain management processes. The Microsoft MB-335 Certification Exam is an ideal way for professionals to demonstrate their expertise in supply chain management using Dynamics 365 and advance their careers in this field.

## Microsoft Dynamics 365 Supply Chain Management Functional Consultant Expert Sample Questions (Q139-Q144):

### NEW QUESTION # 139

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Supply Chain Management and configures the system to support process manufacturing. The company manufactures pain-relieving lotions. Several of the primary ingredients are delivered at different concentrations depending on the ingredient and vendor ingredient A is the primary active ingredient in the lotion. IngredientB is used as a compensating ingredient.

You need to ensure that the system is set up to support the manufacturing process.

Solution: Create a dimension-based product master with variants and use the trade agreements to specify the different pricing. Does the solution meet the goal?

- A. Yes
- B. No

**Answer: B**

Explanation:

The solution does not meet the goal. Here is the explanation:

\* To ensure that the system is set up to support the process manufacturing of pain-relieving lotions, you should use the following steps1:

\* Create a product master for the lotion and release it to the relevant legal entities. On the Product dimension groups page, select Constraint-based configuration as the configuration technology, and select the configuration dimension. On the Released product details page, select Configurable on the Engineer tab.

\* Create a constraint-based product configuration model for the lotion and add it as a version to the product master. On the Constraint-based product configuration model details page, add attributes, constraints, subcomponents, BOM lines, and route operations to define the features and structure of the lotion. For example, you can add an attribute for ingredient A and specify its concentration as a value. You can also add constraints to limit the combinations of attribute values that are allowed.

\* Create a price model for the lotion and link it to the product configuration model. On the Price

\* models page, add price components and specify how they are calculated based on attributes, subcomponents, BOM lines, or route operations. For example, you can add a price component for ingredient A and specify different prices for different concentrations.

\* Configure products on sales orders, sales quotations, purchase orders, or production orders by using the Product configuration models page. You can select values for attributes and see how they affect the price of the lotion. You can also view the price details and see how each price component contributes to the total price.

\* The solution in the question is not correct, because it does not involve constraint-based product configuration or price models.

Creating a dimension-based product master with variants and using trade agreements to specify different pricing would not allow you to handle different concentrations of ingredients or calculate prices based on attributes.

1: Product configuration overview : Create constraint-based configuration : Price models

### NEW QUESTION # 140

A company produces custom-made bicycles that offer many different configurations.

Your standard bicycle, B-0001, is made with many common components such as a frame and wheels.

Customers can choose between two frames: F-0001 or F-0009. Wheel W-0001 is only compatible with frame F-0001.

You create the following configuration groups: Frames, Wheels

You need to ensure that users can only select valid combinations of frames and wheels.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

□

**Answer:**

#### NEW QUESTION # 141

A company uses Dynamics 365 Supply Chain Management.

A piece of machinery that is critical to a production order breaks down during a production order.

The completed quantities of the production order must be shipped. The remaining quantity on the production order needs to be completed once the machinery is fixed. Negative inventory is not allowed for the items.

You need to resolve the production issue.

What should you do?

- A. Cancel the production order and create a new order for the finished quantity.
- **B. End the current production order and create a new order for the remaining quantity.**
- C. Split the current production order into two production orders.
- D. Ship the production quantity that is reported as finished.

**Answer: B**

#### NEW QUESTION # 142

You have a product that can be manufactured on two different production lines in the same warehouse. You create resources and then create individual input locations for the resources. You create two routes. Each route uses different resources.

Materials are staged for consumption in different locations based on the resources being utilized for production.

You need to set up the formula to consume the goods from the correct line-side location.

What should you do?

- A. Select a warehouse and consumption operation for each line.
- **B. Select resource consumption and the operation for each line.**
- C. Select the plan group and consumption operation for each line.
- D. Specify a site in the formula header.

**Answer: B**

#### NEW QUESTION # 143

A customer produces light projection toys for holiday decorations throughout the year.

You must implement Bills of material (BOMs) for the product lifecycle. The solution must meet the following requirements:

□ You need to create a BOM for each phase.

Which BOM types should you use? To answer, select the appropriate configuration options in the answer area NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

□ Explanation:

□

#### NEW QUESTION # 144

.....
