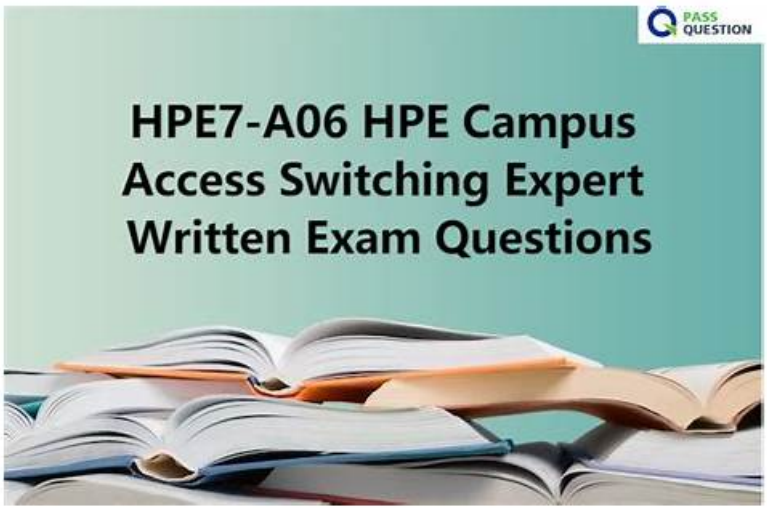
HPE7-A06 Latest Test Question | HPE7-A06 Test Questions Pdf



DOWNLOAD the newest Test4Engine HPE7-A06 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1v60YG9VC_Xqpd4oGeWP5QzzUctBcYuCu

The online version of our HPE7-A06 exam questions can apply to all kinds of eletronic devices, such as the IPAD, phone and laptop. And this version of our HPE7-A06 training guide is convenient for you if you are busy at work and traffic. Wherever you are, as long as you have an access to the internet, a smart phone or an I-pad can become your study tool for the HPE7-A06 Exam. Isn't it a good way to make full use of fragmentary time?

HP exam simulation software is the best offline method to boost preparation for the HP HPE7-A06 examination. The software creates a HPE7-A06 real practice test-like scenario where aspirants face actual HPE7-A06 exam questions. This feature creates awareness among users about HPE Campus Access Switching Expert Written Exam exam pattern and syllabus. With the desktop HP HPE7-A06 Practice Exam software, you can practice for the test offline via any Windows-based computer.

HPE7-A06 Test Questions Pdf - Reliable HPE7-A06 Exam Review

Are you still distressed that you are young learner of HPE7-A06 exam prep? From now on, Test4Engine will solve all your worries about the HPE7-A06 test. The textbooks of HPE7-A06 test questions contain different perspective materials. Even if you are young learners, you can master HPE7-A06 Test Questions easily. Having it, you will have the key to pass HPE7-A06 exam and will have unprecedented confidence. So what are you waiting for?

HPE Campus Access Switching Expert Written Exam Sample Questions (Q51-Q56):

NEW QUESTION # 51
A network administrator is implementing a new VoIP solution. They want the AOS-CX switches to advertise the correct DSCP priority for the physical IP phones.
Which switch features are needed to implement this solution? (Choose two.)

- A. LLDP dot3 mfs
- B. LLDP med network-policy
- C. Priority-Flow Control (PFC)
- D. Voice VLAN
- E. LLDP med DSCP

Answer: B,D

Explanation:
To ensure IP phones receive the correct QoS settings, the switch must use Voice VLAN to separate VoIP traffic and apply appropriate QoS policies. Additionally, LLDP-MED network-policy is required to advertise voice-related parameters (such as VLAN ID, priority, and DSCP values) to the IP phones so they can mark traffic correctly.

NEW QUESTION # 52
You are configuring an HPE Aruba Networking gateway cluster with AOS-10. What is true about gateway functionality? (Choose two.)

- A. User traffic in tunneled mode is encrypted per default.
- B. AOS-10 only supports high-value client session synchronization for the first failover.
- C. PAPI traffic is traversing through an IPSEC tunnel.
- D. Multiversioning between AP and gateways is not supported.
- E. LACP is not supported when manually provisioning gateways.

Answer: A,C

Explanation:
PAPI traffic is traversing through an IPSEC tunnel → Correct. In AOS-10, AP-gateway control traffic (PAPI) is protected using IPsec.
User traffic in tunneled mode is encrypted per default → Correct. Client traffic sent in tunneled SSID mode is automatically encrypted over the AP-gateway tunnel.

NEW QUESTION # 53
Refer to the exhibit.
Acme Corp has VM workload running from ToR-1, and has noticed performance degradation.
They suspect ToR-1 uplinks are periodically overutilized.
List valid reasons why ToR-1 uplinks are being overutilized based on the diagram. (Choose two.)

- A. Core-1 and Core-2 are not running the same firmware.
- B. The VLAN to instance mapping is not the same on all switches.
- C. ToR-1 uplinks and downlinks are both running spanning-tree port-type admin-network.
- D. The customer has used the default MSTP region configuration.
- E. Core-2 has been incorrectly configured as the root bridge.

Answer: B,D

Explanation:
With default MSTP region settings, devices form different regions, so only the CIST participates across them. This removes per-instance load-sharing and pushes all VLANs over a single active uplink, overutilizing it.
If VLAN-to-instance mappings differ between switches, MSTP instances don't align end-to-end, so VLANs cannot split paths per instance and converge onto one uplink, causing periodic overutilization.

NEW QUESTION # 54
Exhibit.
An end-to-end QoS design needs to be Implemented for wired and wireless. What is needed on the LAN side to maintain the correct DSCP tags?

- A. to create a WMM to DSCP mapping on the LAN Edge
- B. to trust at DSCP-marked packetsin the QoS interior ports
- C. to create a custom DSCP mapping as WLAN DSCP values are different
- D. tocreate a WMM la DSCP mapping on the WLAN side

Answer: B

NEW QUESTION # 55

A client is unable to connect to the network, In the HPE Aruba Networking ClearPass access tracker, wo can seean EAP timeout What is a possible cause of this message?

- A. The radius server can seethat theclient certificate is expired.
- B. The client does not trust the radius server certificate.
- C. The radius server doesnot trust the client certificate
- D. The client can see that theradiusserver certificateis expired.

Answer: B

Explanation:
The question involves an EAP timeout in HPE Aruba Networking ClearPass Access Tracker during an 802.1 X authentication attempt, with the task of identifying a possible cause.
* Analysis of Options:
* Option A:Incorrect. A client certificate trust issue would cause a different error, not an EAP timeout.
* Option B:Incorrect. An expired client certificate would result in an authentication failure, not a timeout.
* Option C:Incorrect. If the client sees an expired RADIUS server certificate, it would reject it, but this typically causes a trust error, not a timeout.
* Option D:Correct. If the client does not trust the RADIUS server's certificate (e.g., missing CA certificate or untrusted issuer), it may fail to proceed with the EAP handshake, leading to an EAP timeout.
* Why Option D is Correct:In 802.1X authentication with EAP (e.g., EAP-TLS or EAP-PEAP), the client must trust the RADIUS server's certificate to establish a secure TLS tunnel. If the client's trust store lacks the Certificate Authority (CA) certificate or the server's certificate is untrusted (e.g., self- signed without proper installation), the clientaborts the EAP handshake, resulting in an EAP timeout logged in ClearPass. This is a common issue in 802.1X deployments and can be resolved by ensuring the client has the correct CA certificate or by using a trusted server certificate, as per HPE Aruba Networking's security guidelines.
* Relevance to Certification Objectives:
* Authentication/Authorization (9%):Troubleshooting 802.1X and ClearPass authentication issues.
* Security (10%):Diagnosing wired 802.1X with EAP-TLS failures.
* Troubleshooting (10%):Resolving authentication timeouts in campus networks.
