

C-BW4H-2505시험준비공부, C-BW4H-2505최고덤프

NOTE: Each correct selection is worth one point.

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Answer:

Required secrets:

- Certificate
- Personal access token
- Shared Access Authorization token
- Username and password

Storage location:

- Azure Data Lake
- Azure Key Vault
- Azure Storage with HTTP access
- Azure Storage with HTTPS access

Explanation:

Every request made against a storage service must be authorized, unless the request is for a blob or container resource that has been made available for public or signed access. One option for authorizing a request is by using Shared Key.

Scenario: The mobile applications must be able to call the share pricing service of the existing retirement fund management system. Until the system is upgraded, the service will only support basic authentication over HTTPS.

The investment planning applications suite will include one multi-tier web application and two iOS mobile application. One mobile application will be used by employees; the other will be used by customers.

Reference: <https://docs.microsoft.com/en-us/rest/api/storageservices/authorize-with-shared-key>

Question: 3

C-BW4H-2505최고덤프, C-BW4H-2505시험응시

아직도 SAP인증C-BW4H-2505시험준비를 어떻게 해야 할지 망설이고 계시나요? 고객님의 IT인증시험준비길에는 언제나 KoreaDumps가 곁을 지켜주고 있습니다. KoreaDumps시험공부자료를 선택하시면 자격증취득의 소원이 이루어집니다. SAP인증C-BW4H-2505시험덤프는KoreaDumps가 최고의 선택입니다.

SAP C-BW4H-2505 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.
주제 2	<ul style="list-style-type: none"> • Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.
주제 3	<ul style="list-style-type: none"> • Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
주제 4	<ul style="list-style-type: none"> • SAP BW Query Design: This section of the exam assesses the ability of Data Engineers to create and run queries using SAP BW • 4HANA. It evaluates how well candidates can work with query components to retrieve and structure data effectively for reporting and analysis.
주제 5	<ul style="list-style-type: none"> • InfoObjects and InfoProviders: This section tests the knowledge of Data Engineers in working with InfoObjects and InfoProviders in SAP BW • 4HANA. It involves handling data structures used for organizing, storing, and accessing analytical data.

최신 SAP Certified Associate C-BW4H-2505 무료 샘플문제 (Q11-Q16):

질문 # 11

You notice that an SAP ERP ODP_SAP DataSource is delivering incorrect values into the first persistent data layer in SAP BW/4HANA. Which options do you have to analyze a potential extractor issue? Note: There are 2 correct answers to this question.

- A. Check entries in the table RSDDSTATEXTRACT in SAP ERP.
- B. Use the transaction ODQMON (Monitor Delta Queues) in SAP BW/4HANA.
- C. Use the program RODPS_REPL_TEST in SAP ERP.
- D. Use the transaction RSA3 (Extractor checker) in SAP ERP.

정답: C,D

설명:

When dealing with incorrect values being delivered by an SAP ERP ODP_SAP DataSource into the first persistent data layer in SAP BW/4HANA, it is crucial to analyze potential issues at the extractor level in the SAP ERP system. Below is a detailed explanation of the correct answers:

* Explanation: The program RODPS_REPL_TEST is used to test the replication of data from an ODP_SAP DataSource in the SAP ERP system. It allows you to simulate the extraction process and verify whether the data being extracted matches the expected values. This helps identify issues with the extractor logic or configuration.

* RODPS_REPL_TEST is a standard tool provided by SAP for testing ODP-based DataSources. It is particularly useful for diagnosing issues related to data extraction in SAP ERP systems.

Option B: Use the transaction ODQMON (Monitor Delta Queues) in SAP BW/4HANA Explanation:

ODQMON is used in SAP BW/4HANA to monitor delta queues and ensure that data is being transferred correctly from the source system. However, it does not help analyze issues at the extractor level in the SAP ERP system. ODQMON focuses on the BW/4HANA side of the data transfer process.

Reference: ODQMON is primarily a monitoring tool for delta queues in BW/4HANA and is not suitable for diagnosing extractor issues in the ERP system.

Option C: Use the transaction RSA3 (Extractor checker) in SAP ERP Explanation: RSA3 is a powerful tool for testing and validating extractors in the SAP ERP system. It allows you to execute the extractor logic and view the extracted data directly in the ERP system. By comparing the extracted data with the expected values, you can identify issues such as incorrect mappings, filters, or transformations.

Reference: RSA3 is widely used for debugging extractor issues in SAP ERP systems. It is an essential tool for ensuring that DataSources deliver accurate data to SAP BW/4HANA.

Option D: Check entries in the table RSDDSTATEXTRACT in SAP ERP. Explanation: The table RSDDSTATEXTRACT is not a valid or standard table in SAP ERP systems. It does not exist in the context of ODP_SAP DataSources or extractor diagnostics. Therefore, this option is incorrect.

Reference: SAP documentation does not mention RSDDSTATEXTRACT as a relevant table for analyzing extractor issues.

Summary To analyze potential extractor issues in the SAP ERP system:

RODPS_REPL_TEST: Simulates and tests the extraction process for ODP_SAP DataSources.

RSA3: Validates the extractor logic and verifies the extracted data.

These tools help identify and resolve issues at the extractor level, ensuring that correct data is delivered to the first persistent data layer in SAP BW/4HANA.

질문 # 12

You want to build an SAP HANA HDI calculation view of data category CUBE, but you get a "no measure defined" error. For the business requirement, a measure does not make sense. Besides changing the data category to DIMENSION, what do you have to do?

- A. Switch from an aggregation node to a projection node.
- B. Switch from an aggregation node to a star join node.
- C. Switch from a projection node to an aggregation node.
- D. Switch from a projection node to a star join node.

정답: C

질문 # 13

How does SAP position SAP Datasphere in supporting business users? Note: There are 3 correct answers to this question.

- A. Business users can leverage embedded analytic Fiori apps for data analysis.
- B. Business users can upload their own CSV files.
- C. Business users can allocate system resources without IT involvement.
- D. Business users can create agile models from different sources.
- E. Business users can create restricted calculated columns based on existing models.

정답: A,B,D

설명:

SAP Datasphere (formerly known as SAP Data Warehouse Cloud) is designed to empower business users by providing self-service capabilities while maintaining governance and scalability. Let's analyze each option to determine why A, B, and E are correct:

* Explanation: SAP Datasphere allows business users to create agile data models by integrating data from various sources, such as on-premise systems, cloud applications, and external datasets. This flexibility enables users to build models that reflect their specific business needs without heavy reliance on IT.

*The platform provides tools like the "Data Builder" and "Space Management" to facilitate the creation of models from diverse data sources. These tools are designed to be user-friendly, enabling business users to work independently.

2. Business users can leverage embedded analytic Fiori apps for data analysis (Option B) Explanation:

SAP Datasphere integrates with SAP Analytics Cloud (SAC) and other analytics tools, allowing business users to leverage embedded Fiori apps for data analysis. These apps provide pre-built dashboards and visualizations, enabling users to perform advanced analytics without requiring technical expertise.

Reference: Embedded analytics in SAP Datasphere supports real-time insights and decision-making, aligning with SAP's vision of empowering business users through intuitive tools.

3. Business users can allocate system resources without IT involvement (Option C) Explanation: While SAP Datasphere provides self-service capabilities, resource allocation (e.g., memory, CPU, storage) is typically managed at the administrative level to ensure optimal performance and governance. Business users do not have direct control over system resources to prevent misuse or over-allocation.

Reference: Resource management in SAP Datasphere is governed by administrators who define quotas and limits for spaces and users. This ensures that the system remains stable and scalable.

4. Business users can create restricted calculated columns based on existing models (Option D) Explanation: Creating restricted calculated columns requires a deeper understanding of data modeling and SQL scripting, which is typically beyond the scope of business users. This task is more suited for data engineers or power users who have technical expertise.

Reference: While SAP Datasphere supports advanced modeling features, these are often used by technical users rather than business users.

5. Business users can upload their own CSV files (Option E) Explanation: SAP Datasphere allows business users to upload CSV

files directly into their spaces. This feature enables users to incorporate their own data into the platform for analysis and modeling, fostering agility and collaboration.

Reference: The ability to upload CSV files is part of SAP Datasphere's self-service capabilities, empowering business users to integrate personal or departmental data without IT intervention.

질문 # 14

Which objects values can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

- A. Navigation attributes
- B. Display attributes
- C. Basic key figures
- D. Time characteristics
- E. Hierarchies

정답: B,D,E

질문 # 15

Why do you use an authorization variable?

- A. To provide an analysis authorization with dynamic values
- B. To protect a variable using an authorization object
- C. To filter a query based on the authorized values
- D. To provide dynamic values for the authorization object S_RS_COMP

정답: A

설명:

Authorization variables in SAP BW/4HANA are used to dynamically assign values to analysis authorizations, ensuring that users can only access data they are authorized to view. Let's analyze each option to determine why D is correct:

* Explanation: The authorization object S_RS_COMP is related to CompositeProviders and their components. While this object plays a role in restricting access to specific CompositeProvider components, it is not directly tied to the use of authorization variables. Authorization variables are specifically designed for analysis authorizations, not for generic authorization objects like S_RS_COMP

* Authorization variables are part of the analysis authorization framework, which focuses on restricting access to data based on characteristic values.

2. To filter a query based on the authorized values (Option B) Explanation: Filtering a query based on authorized values is a function of analysis authorizations themselves, not authorization variables.

Authorization variables are used to dynamically populate the values within an analysis authorization, but they do not directly filter queries.

Reference: Query filtering based on authorized values is handled by the runtime behavior of analysis authorizations, not by the variables themselves.

3. To protect a variable using an authorization object (Option C) Explanation: Protecting a variable using an authorization object is unrelated to the purpose of authorization variables. Variables in SAP BW/4HANA are typically protected through input validation or restrictions, but this is not the role of authorization variables.

Reference: Authorization variables are used to dynamically assign values to analysis authorizations, not to secure other variables.

4. To provide an analysis authorization with dynamic values (Option D) Explanation: Authorization variables are specifically designed to dynamically assign values to analysis authorizations at runtime. For example, you can use an authorization variable to restrict access to data based on the user's login ID, organizational unit, or other dynamic criteria. This ensures that users only see the data they are authorized to access without requiring static pre-defined values.

Reference: In SAP BW/4HANA, authorization variables are a key feature of the analysis authorization framework. They allow for flexible and dynamic restrictions, enhancing security and usability.

Conclusion The correct answer is D (To provide an analysis authorization with dynamic values). Authorization variables play a critical role in dynamically assigning values to analysis authorizations, ensuring that users can only access the data they are authorized to view.

질문 # 16
