

Valid Braindumps 312-49v11 Questions | Latest 312-49v11 Demo

P.S. Free 2026 EC-COUNCIL 312-49v11 dumps are available on Google Drive shared by ActualTestsQuiz
<https://drive.google.com/open?id=1de06vVMjIhWoNxQZ5OTbEimxTu5N8wuf>

The pass rate is 98.95% for the 312-49v11 training materials, and most candidates can pass the exam just one time. We ensure you that you will refund your money if you fail to pass the exam. In addition, we offer you free update for one year, and the update version for the 312-49v11 exam dumps will be sent to your email automatically, so that you can know the latest information about the 312-49v11 Exam Dumps. We provide you with the online chat service, and in the process of learning, if you have any questions about the 312-49v11 exam dumps, you can consult us.

The modern EC-COUNCIL world is changing its dynamics at a fast pace and has become so competitive. To stay updated and competitive in the market you have to learn new in-demand skills. With one EC-COUNCIL 312-49v11 exam certificate you can do this task nicely. With the EC-COUNCIL 312-49v11 Certification Exam successful candidates can validate their knowledge, increase marketability, enhance academic performance, improve reputation and increase earning power and other personal and professional benefits, etc.

Free PDF Valid Braindumps 312-49v11 Questions | Perfect Latest 312-49v11 Demo: Computer Hacking Forensic Investigator (CHFI-v11)

Dear customers, if you are prepared to take the exam with the help of excellent 312-49v11 learning materials on our website, the choice is made brilliant. Our 312-49v11 training materials are your excellent choices, especially helpful for those who want to pass the exam without bountiful time and eager to get through it successfully. Let us take a try of our amazing 312-49v11 Exam Questions and know the advantages first!

EC-COUNCIL Computer Hacking Forensic Investigator (CHFI-v11) Sample Questions (Q254-Q259):

NEW QUESTION # 254

How many times can data be written to a DVD+R disk?

- A. Infinite
- B. Twice
- C. Zero
- D. Once

Answer: D

NEW QUESTION # 255

The system administrator of a large financial corporation detects an unauthorized attempt to access the company's database. In order to support the investigation and maintain the chain of custody, which of the following actions should be taken immediately by the administrator?

- A. Power down all computing systems to halt the unauthorized access attempt
- B. Isolate the compromised computing systems from further use or tampering, document every detail relevant to the incident, and transfer copies of system logs onto clean media
- C. Begin attempting to trace the source of the attack and retaliate to prevent future incidents
- D. Independently analyze the compromised systems for evidence of a security breach without notifying the incident/duty manager

Answer: B

NEW QUESTION # 256

During a routine network audit, the cybersecurity team at a large organization detects unusual network traffic patterns and unauthorized access attempts to sensitive systems, indicating a potential security breach. In accordance with the Incident Response Process Flow, what should be the immediate priority for the cybersecurity team after various third-party vendors and clients are informed of the incident?

- A. Containment
- B. Incident Recording and Assignment
- C. Eradication
- D. Incident Triage

Answer: A

Explanation:

According to the CHFI v11 Procedures and Methodology domain, the Incident Response Process Flow follows a structured sequence to ensure incidents are handled efficiently, lawfully, and with minimal impact.

Once an incident is detected and stakeholders such as management, third-party vendors, and affected clients are informed, the next immediate priority is containment.

Containment focuses on limiting the scope and impact of the incident to prevent further damage, data loss, or lateral movement by the attacker. This may include isolating affected systems, blocking malicious IP addresses, disabling compromised accounts, segmenting networks, or applying temporary firewall rules.

CHFI v11 emphasizes that containment must be executed swiftly to preserve evidence while stopping the ongoing threat. The other options represent different phases of the incident response lifecycle. Incident triage and incident recording and

assignment occur earlier, during detection and initial response. Eradication is a later phase that involves removing malware, closing vulnerabilities, and eliminating attacker persistence—but only after the threat has been successfully contained. CHFI v11 explicitly states that failing to prioritize containment after notification can allow attackers to continue exploiting systems, leading to greater organizational and legal consequences. Therefore, the correct and CHFI v11-verified immediate priority is Containment, making Option A the correct answer.

NEW QUESTION # 257

An "idle" system is also referred to as what?

- A. **Zombie**
- B. Bot
- C. PC not being used
- D. PC not connected to the Internet

Answer: A

NEW QUESTION # 258

Nora, a forensic investigator, is examining the Windows Registry of a compromised system as part of her investigation into a potential insider threat. She wants to determine which folders were most recently accessed by the user. After reviewing the Registry, she discovers that a particular Registry key stores information about the folders the user recently accessed, including the folder names and their paths in the file system. Based on her findings, which of the following Registry keys contains this information?

- A. **BagMRU key**
- B. NodeSlot value
- C. MRUListEx key
- D. Bags key

Answer: A

Explanation:

According to the CHFI v11 Operating System Forensics objectives, the Windows Registry is a critical source of evidence for reconstructing user activity, particularly in insider threat investigations. One of the most important Registry artifacts for identifying recently accessed folders is the BagMRU key.

The BagMRU key is part of the Windows ShellBags artifact structure and is specifically designed to track folder navigation history. It stores hierarchical information about folders accessed by a user, including folder names, directory paths, and access order relationships. These keys allow forensic investigators to determine which directories a user browsed, even if the folders were accessed via Windows Explorer and later deleted from the system.

While the MRUListEx value exists within ShellBag-related keys, it only defines the order of access and does not store the actual folder path or name. The Bags key, on the other hand, stores folder view settings such as icon size, window position, and display preferences—not access history. The NodeSlot value is associated with Jump Lists and application usage tracking rather than directory navigation.

CHFI v11 explicitly highlights ShellBags and BagMRU keys as essential artifacts for reconstructing user behavior, especially in cases involving data exfiltration or insider misuse. Therefore, the correct and CHFI-verified answer is BagMRU key (Option A).

NEW QUESTION # 259

.....

The web-based Computer Hacking Forensic Investigator (CHFI-v11) (312-49v11) practice test software can be used through browsers like Firefox, Safari, and Google Chrome. The customers don't need to download or install any excessive plugins or software in order to use the web-based Computer Hacking Forensic Investigator (CHFI-v11) (312-49v11) practice exam format. The web-based Computer Hacking Forensic Investigator (CHFI-v11) (312-49v11) practice test software format is supported by different operating systems like Mac, iOS, Linux, Windows, and Android.
