Successful with Verified and Valid CyberArk CPC-CDE-RECERT Exam Questions [2026]

More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification CPC-

CDE-RECERT certifications to prove their ability, can we get over rivals in the social competition. Many candidates be defeated by the difficulty of the CPC-CDE-RECERT exam, but if you can know about our CPC-CDE-RECERT Exam Materials, you will overcome the difficulty easily. If you want to buy our CPC-CDE-RECERT exam questions please look at the features and the functions of our product on the web or try the free demo of our CPC-CDE-RECERT exam questions.

CyberArk CDE-CPC Recertification Sample Questions (Q32-Q37):

NEW QUESTION # 32

When installing PSM on a Windows 2019 Server, under which circumstances should the PSMConnect and PSMAdminConnect users be moved to the domain? (Choose two.)

- A. When the RDS session broker has a value > 1
- B. When you want to extend PSM sessions beyond one hour
- C. When you need to enable PSM for Web Support
- D. When you want to load balance the PSM installation
- E. When RDS CAL Per User licenses are in use

Answer: B,E

Explanation:

CyberArk explicitly states that you must move PSM application users (PSMConnect/PSMAdminConnect) to domain users on Windows 2019/2022 when:

- * you are using RDS CAL per-user licensing, and
- * you want to extend PSM sessions beyond one hour.

NEW QUESTION # 33

After correctly configuring reconciliation parameters in the Prod-AIX-Root-Accounts Platform, this error message appears in the CPM log: CACPM410E Ending password policy Prod-AIX-Root-Accounts since the reconciliation task is active but the AllowedSafes parameter was not updated What caused this situation?

- A. The reconciliation account defined in the Platform is in a locked state and is not accessible.
- B. The AllowedSafes parameter does not include the safe containing the reconciliation account defined in the Platform
- C. A second CPM is incorrectly configured to manage the reconciliation account's safe which is causing a deadlock situation between the two CPMs.
- D. The CPM is currently configured to use to an unsigned engine.

Answer: B

Explanation:

The error message "CACPM410E Ending password policy Prod-AIX-Root-Accounts since the reconciliation task is active but the AllowedSafes parameter was not updated" suggests an issue with configuration parameters. The likely cause is:

- * The AllowedSafes parameter does not include the safe containing the reconciliation account defined in the Platform (Option C). This parameter must accurately reflect all safes where the reconciliation account operates to ensure proper management and access by the Central Policy Manager (CPM). If the safe containing the reconciliation account is not listed, the CPM cannot perform its tasks, leading to this error.

Reference: CyberArk's error codes and troubleshooting guides detail how specific configuration mismatches, like an incomplete AllowedSafes parameter, can disrupt normal operations, especially in reconciliation processes.

NEW QUESTION # 34

What is the correct CyberArk user to use when installing the Privilege Cloud Connector software?

- A. installeruser@<suffix>
- B. Administrator
- C. Installer
- D. <subdomain>_admin

Answer: A

NEW QUESTION # 35

Before the hardening process, your customer identified a PSM Universal Connector executable that will be required to run on the PSM. Which file should you update to allow this to run?

- A. PSMAppConfig.xml
- **B. PSMConfigureAppLocker.xml**
- C. PSMHardening.xml
- D. PSMConfigureHardening.xml

Answer: B

Explanation:

To allow a PSM Universal Connector executable to run on the PSM after the hardening process, you should update the PSMConfigureAppLocker.xml file. This file configures AppLocker, which is a feature that controls which apps and files users can run on a system. Including the necessary executable in the PSMConfigureAppLocker.xml ensures it is whitelisted by AppLocker policies, thus permitted to execute even under the hardened security settings of the PSM environment. References to this configuration can be found in the CyberArk Privilege Session Manager implementation documentation, specifically in sections detailing customization and security hardening of environment configurations.

NEW QUESTION # 36

You want to enforce Multi-Factor Authentication (MFA) for all Privilege Cloud Shared Services users and require them to set up an MFA factor. How should you accomplish this?

- A. Only allow SAML as the authentication method, enforce MFA on the SAML Identity Provider (IdP), and ensure users set up MFA accordingly on the IdP.
- B. Navigate to the Identity Administration Portal's Policies section and set the user security policy for Privilege Cloud to an authentication profile that only allows Multiple Authentication Mechanisms.
- **C. Navigate to the Identity Administration Portal's Policies section and configure the required authentication policies for CyberArk Identity.**
- D. Navigate to the Identity Administration Portal's Policies section and configure the authentication policies for CyberArk Identity, adding a new authentication rule that applies with an "identity cookie" as a filter.

Answer: C

Explanation:

In the Shared Services model, MFA enforcement is done in CyberArk Identity / Identity Administration using Core Services > Policies:

* To enforce MFA broadly, CyberArk documents configuring MFA for all users by enabling authentication policy controls and creating/assigning an authentication profile (the mechanisms /challenges).

* To require users to set up MFA factors, CyberArk documents the setting under User Security Policies > User Account Settings where you specify the minimum number of authentication factors users must configure upon login.

Option B is the only choice that correctly points you to the right place and activity (Identity Administration Policies to configure authentication/MFA requirements and enrollment requirements).

NEW QUESTION # 37

.....

Our CPC-CDE-RECERT real exam applies to all types of candidates. Buying a set of the CPC-CDE-RECERT learning materials is not difficult, but it is difficult to buy one that is suitable for you.
