Pass CNX-001 Guarantee & CNX-001 New Test Materials

Actual CompTIA CNX-001 exam questions in our PDF format are ideal for restrictions-free quick preparation for the test. CompTIA CNX-001 Real exam questions which are available for download in PDF format can be printed and studied in a hard

copy format. Our CompTIA CloudNetX Certification Exam (CNX-001) PDF file of updated exam questions is compatible with smartphones, laptops, and tablets. Therefore, you can use this CompTIA CloudNetX Certification Exam PDF to prepare for the test without limits of time and place.

CompTIA CloudNetX Certification Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47
A company provides an API that runs on the public cloud for its customers. A fixed number of VMs host the APIs. During peak hours, the company notices a spike in usage that results in network communication speeds slowing down for all customers. The management team has decided that access for all customers should be fair and accessible at all times. Which of the following is the most cost-effective way to address this issue?

- A. Enable throttling on APIs.
- B. Use an allow list for customers using APIs.
- C. Increase the MTU on the VMs.
- D. Increase the number of VMs running APIs.

Answer: A

NEW QUESTION # 48
New devices were deployed on a network and need to be hardened.
INSTRUCTIONS
Use the drop-down menus to define the appliance-hardening techniques that provide the most secure solution.
If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Answer:

Explanation:
Explanation:
C:\Users\Waqas Shahid\Desktop\Mudassir\Untitled.jpg

NEW QUESTION # 49
An outage occurred after a software upgrade on core switching. A network administrator thinks that the firmware installed had a bug. Which of the following should the network administrator do next?

- A. Implement the solution.
- B. Establish a plan of action to resolve the issue.
- C. Test the theory to determine cause.
  Document lessons learned.

Answer: C

Explanation:
Before taking corrective action, you need to verify that the new firmware is indeed the root cause, such as by rolling back to the previous version in a controlled test or reproducing the failure in a lab, so you're sure your fix addresses the actual problem.

NEW QUESTION # 50
A network architect is designing a solution to place network core equipment in a rack inside a data center.
This equipment is crucial to the enterprise and must be as secure as possible to minimize the chance that anyone could connect directly to the network core. The current security setup is:
In a locked building that requires sign in with a guard and identification check.
In a locked data center accessible by a proximity badge and fingerprint scanner.
In a locked cabinet that requires the security guard to call the Chief Information Security Officer (CISO) to get permission to provide the key.
Which of the following additional measures should the architect recommend to make this equipment more secure?

- A. Have the CISO accompany any network engineer that needs to do work in this cabinet.

- B. Make all engineers with access to the data center sign a statement of work.
- C. Set up a video surveillance system that has cameras focused on the cabinet.
- D. Require anyone entering the data center for any reason to undergo a background check.

Answer: C

Explanation:
Recording and monitoring all activity at the cabinet greatly strengthens security by providing a real-time deterrent, an audit trail of who accessed it and when, and forensic evidence if an incident ever occurs.

NEW QUESTION # 51
A developer reports errors when trying to access a web application. The developer uses Postman to troubleshoot and receives the following error:
* HTTP Status: 403 Forbidden
* Headers include authentication-related variables such as access_key, signature, salt, and timestamp
* The request is a GET request to a payment methods API
Which of the following is the cause of the issue?

- A. Too restrictive NGFW rule
- B. Lack of user authentication
- C. Requested element not found
- D. Incorrect HTTP redirection

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
A 403 Forbidden error indicates that the request was understood by the server but is refusing to fulfill it due to insufficient authorization. The developer is attempting to call a protected API that requires valid credentials such as an access key and signature (often used in HMAC-based APIs), but the values appear as Postman variables (e.g., {{rapyd_access_key}}), which suggests they were not replaced with actual credentials.
This typically means that the request lacks proper authentication or authorization headers, or the keys
/signature are incorrect or missing. The presence of access_key, signature, salt, and timestamp in the request implies the API requires authentication, but the variables were not resolved or valid.
Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "API Security and Authentication":
"A 403 error typically results from failed authentication or lack of proper authorization. Developers must ensure that tokens or signatures are valid, not missing, and properly injected." Other options:
* A. 404 is the code for a missing resource, not 403.
* C. A firewall rule would block the request entirely (e.g., no response or a 0 status), not result in a 403 from the server.
* D. HTTP redirection issues typically result in 3xx codes, not 403.

NEW QUESTION # 52
......

Our experts group collects the latest academic and scientific research results and traces the newest industry progress in the update of the CNX-001 study materials. Then the expert team processes them elaborately and compiles them into the test bank. Our system will timely and periodically send the latest update of the CNX-001 Study Materials to our clients. So the clients can enjoy the results of the latest innovation and achieve more learning resources. The credits belong to our diligent and dedicated professional innovation team and our experts.
