

Pass Guaranteed Oracle - 1z1-076 Perfect Valid Braindumps Ebook

BTW, DOWNLOAD part of TorrentExam 1z1-076 dumps from Cloud Storage: <https://drive.google.com/open?id=18xbiebdDNezWJdQR89I4avVnACh3VxiU>

I am glad to introduce a secret weapon for all of the candidates to pass the exam as well as get the related certification without any more ado-- our 1z1-076 study materials. You can only get the most useful and efficient study materials with the most affordable price. With our 1z1-076 practice test, you only need to spend 20 to 30 hours in preparation since there are all essence contents in our 1z1-076 Study Materials. What's more, if you need any after service help on our 1z1-076 exam guide, our after service staffs will always offer the most thoughtful service for you.

In the process of preparing the passing test, our 1z1-076 guide materials and service will give you the oriented assistance. We can save your time and energy to arrange time schedule, search relevant books and document, ask the authorized person. As our 1z1-076 Study Materials are surely valid and high-efficiency, you should select us if you really want to pass 1z1-076 exam one-shot. With so many advantages of our 1z1-076 training engine to help you enhance your strength, why not have a try?

This Oracle Database 19c: Data Guard Administration (1z1-076) certification is a valuable credential that is designed to validate your expertise all over the world. After successfully competition of 1z1-076 exam you can gain several personal and professional benefits. All these Oracle Database 19c: Data Guard Administration (1z1-076) certification exam benefits will not only prove your skills but also assist you to put your career on the right track and achieve your career objectives in a short time period.

Oracle Database 19c: Data Guard Administration Sample Questions (Q86-Q91):

NEW QUESTION # 86

Which TWO statements are true about configuring Oracle Net Service in a Data Guard environment?

- A. It is necessary to use the failover clause for an address_list with multiple address lists in the tnsnames.ora file.
- B. Enterprise Manager does not require static service registration to restart instances during the course of broker operations.
- C. Install the oracle-database-preinstall-19c package to set the kernel parameters for Oracle Net based on the Data Guard best practice guidelines.
- **D. A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations.**
- **E. Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net.**

Answer: D,E

Explanation:

* A static service must be registered with the local listener to enable DGMGRL to restart instances during the course of broker operations (A): For DGMGRL (Data Guard Manager Command-Line Interface) to perform instance management operations, such as restarting instances, a static service registration in the listener is required. This allows the broker to connect to the database instance even when the instance is not fully up and the dynamic service registration is not available.

* Installing the oracle-database-preinstall-19c package is NOT sufficient to set up operating system kernel parameters for Oracle Net (C): While the oracle-database-preinstall-19c package automates the setting of several kernel parameters to meet the preinstallation requirements for Oracle Database, it does not specifically tailor all settings for Oracle Net in a Data Guard configuration. Additional manual configuration may be required to optimize Oracle Net services for Data Guard operations.

- * Oracle Data Guard Broker documentation
- * Oracle Net Services Administrator's Guide

NEW QUESTION # 87

The Oracle database 19c Observer is currently running on host1 and you wish to have it running on host2.

Examine this list of possible steps:

- 1) Stop the observer on host1
- 2) Disable Fast-Start Failover
- 3) Update the broker configuration with the new observer hostname
- 4) Enable Fast-Start Failover
- 5) Start the Observer on host2

Which contains the minimum required steps to move the observer to host2?

- A. Execute tasks 1, 2, 3, 4, and 5
- B. Execute only task 5
- C. Execute tasks 1 and 5
- D. Execute tasks 1, 3, and 5

Answer: D

Explanation:

- * Stop the Observer on host1 to ensure that there are no conflicts between the instances of the Observer running on different hosts.
- * Update the Data Guard Broker configuration with the new hostname for the Observer. This step is crucial to redirect the Data Guard Broker to communicate with the Observer on the new host.
- * Start the Observer on host2 to resume its operations in the new environment.

Disabling and re-enabling Fast-Start Failover (steps 2 and 4) are not strictly necessary for moving the Observer to a new host. These steps would be more relevant if changes to the configuration of Fast-Start Failover itself were required, which is not the case when simply relocating the Observer.

NEW QUESTION # 88

Which TWO are benefits of using Transaction Guard in a Data Guard environment?

- A. It protects against logical corruptions being replicated to standby databases.
- B. It provides application continuity by replaying transactions interrupted by a failover or a switchover
- C. It protects against recoverable errors during a planned or an unplanned outage of a primary database.
- D. It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover.
- E. It protects against user errors being replicated to standby databases.

Answer: C,D

Explanation:

Transaction Guard provides benefits in terms of transaction consistency and recovery in a Data Guard environment:

* It provides application continuity by rolling back uncommitted transactions interrupted by a failover or switchover (B): Transaction Guard ensures that any uncommitted transactions at the time of an outage are rolled back consistently, thus preserving the integrity of the application's data and state.

* It protects against recoverable errors during a planned or an unplanned outage of a primary database (D): Transaction Guard offers protection against errors that can occur during outages, allowing applications to resume operations more quickly and reliably after recovery.

NEW QUESTION # 89

Your Data Guard environment has a remote physical standby database with real-time query enabled, which is used for reporting, and a logical standby database used for DSS reporting.

Switchovers or failovers are possible due to testing or in case of a disaster.

Clients use local TNSNAMES.ORA files to define connection strings to the database instances.

Which three will prevent clients from connecting to the wrong database instances?

- A. The standby database services must be defined statically with the Listeners running on the standby database hosts.
- B. Client TNS entries for the databases use the correct service names for the intended service.
- C. The client applications must use the correct TNS entries when requesting connections to the database instances.
- D. A service name is registered with the local listener of each database instance.
- E. The DB_NAME and DB_UNIQUE_NAME parameters must be set to the same value for all the databases in the Data Guard environment.
- F. The LOCAL_LISTENER parameter on the primary database instance must always be set.
- G. Oracle Net connectivity to the primary database instance must be established on all the standby database instances.

Answer: A,B,C

Explanation:

Based on Oracle Database 19c: Data Guard Administration documents, the three measures that can prevent clients from connecting to the wrong database instances during switchovers, failovers, or regular operations in a Data Guard environment are:

- * B. The standby database services must be defined statically with the Listeners running on the standby database hosts.
- * D. The client applications must use the correct TNS entries when requesting connections to the database instances.
- * E. Client TNS entries for the databases use the correct service names for the intended service.
- * In an Oracle Data Guard configuration, correctly configuring Oracle Net Services (including TNS entries and listeners) is crucial for ensuring that clients connect to the appropriate database instance, whether it's the primary or standby. Defining services on the standby database and associating them with listeners ensures that client applications can connect to the standby when needed, especially useful in a role transition or when the standby is open for read-only access or real-time query. It's essential that TNS entries used by client applications specify the correct service names that correspond to the intended database roles, such as primary or standby. This setup facilitates seamless connectivity to the appropriate instance based on the role, especially critical during switchovers and failovers when the roles of the databases change.
- * References: Oracle's Data Guard concepts and administration guide provides extensive information on configuring network services for Data Guard environments, ensuring that applications connect to the correct database instance based on the current role of the databases in the Data Guard configuration.

NEW QUESTION # 90

Examine the following parameter settings of the physical standby database:

- * STANDBY_FILE_MANAGEMENT= AUTO
- * ENABLED_PDBS_ON_STANDBY=<null>

During which TWO tasks are files automatically created in the physical standby database after structure changes on the primary database?

- A. Adding a data file or creating a tablespace
- B. Renaming a data file in the primary database
- C. Performing transportable tablespaces
- D. Adding or dropping a redo file group
- E. Creating a PDB from the existing PDB within the same CDB

Answer: A,E

Explanation:

When STANDBY_FILE_MANAGEMENT is set to AUTO, the Oracle Data Guard automatically creates, deletes, and renames files on the standby database to match the changes made on the primary database. The tasks that lead to the automatic creation of files on the standby include:

Adding a data file or creating a tablespace (C): When a new tablespace is created or a new data file is added on the primary database, the standby database automatically replicates this action, maintaining structural consistency with the primary database.

Creating a PDB from the existing PDB within the same CDB (D): Creating a new Pluggable Database (PDB) within a Multitenant Container Database (CDB) on the primary database triggers an automatic creation of the corresponding PDB within the standby CDB.

NEW QUESTION # 91

.....

The clients at home and abroad can both purchase our 1z1-076 study tool online. Our brand enjoys world-wide fame and influences so many clients at home and abroad choose to buy our Oracle Database 19c: Data Guard Administration guide dump. Our company provides convenient service to the clients all around the world so that the clients all around the world can use our 1z1-076 study materials efficiently. Our company boosts an entire sale system which provides the links to the clients all around the world so that the clients can receive our products timely. Once the clients order our 1z1-076 cram training materials we will send the products quickly by mails. The clients abroad only need to fill in correct mails and then they get our products conveniently. Our 1z1-076 cram training materials provide the version with the language domestically and the version with the foreign countries' language so that the clients at home and abroad can use our 1z1-076 study tool conveniently.
