## **Reliable SPLK-1004 Practice Materials - Guaranteed SPLK-1004 Success**

As you know, many exam and tests depend on the skills as well as knowledge, our SPLK-1004 practice materials are perfectly and exclusively devised for the exam and can satisfy your demands both. There are free demos for your reference with brief catalogue and outlines in them. Free demos are understandable materials as well as the newest information for your practice. Under coordinated synergy of all staff, our SPLK-1004 practice materials achieved a higher level of perfection by keeping close attention with the trend of dynamic market.

## **Splunk Core Certified Advanced Power User Sample Questions (Q57-Q62):**

**NEW QUESTION # 57**

Which statement about tsidx files is accurate?

- A. A tsidx file consists of a lexicon and a posting list.
- B. Splunk removes outdated tsidx files every 5 minutes.
- C. Each bucket in each index may contain only one tsidx file.
- D. Splunk updates tsidx files every 30 minutes.

**Answer: A**

Explanation:

A tsidx file contains a lexicon (a list of unique terms) and a posting list (references to occurrences of these terms). This structure supports efficient searching and retrieval of data.

#### NEW QUESTION # 58

What is the default time limit for a subsearch to complete?

- A. 10 minutes
- B. 120 seconds
- C. 5 minutes
- D. 60 seconds

**Answer: D**

Explanation:

The default time limit for a subsearch to complete in Splunk is 60 seconds. If the subsearch exceeds this time limit, it will terminate, and the outer search may fail or produce incomplete results.

Here's why this works:

\* Subsearch Timeout: Subsearches are designed to execute quickly and provide results to the outer search. To prevent performance issues, Splunk imposes a default timeout of 60 seconds.

\* Configuration: The timeout can be adjusted using the `subsearch_maxoutandsubsearch_timeout` settings in `limits.conf`, but the default remains 60 seconds.

Other options explained:

\* Option A: Incorrect because 10 minutes (600 seconds) is far longer than the default timeout.

\* Option B: Incorrect because 120 seconds is double the default timeout.

\* Option C: Incorrect because 5 minutes (300 seconds) is also longer than the default timeout.

Example: If a subsearch takes longer than 60 seconds to complete, you might see an error like:

Error in 'search': Subsearch exceeded configured timeout.

#### NEW QUESTION # 59

Which of the following would exclude all entries contained in the lookup file `baditems.csv` from search results?

- A. `[NOT inputlookup baditems.csv]`
- B. `WHERE item NOT IN (baditems.csv)`
- C. `NOT (lookup baditems.csv OUTPUT item)`
- D. `NOT [inputlookup baditems.csv]`

**Answer: D**

Explanation:

The correct way to exclude entries from the lookup file `baditems.csv` is using `NOT [inputlookup baditems.csv]`. This syntax excludes all entries in the lookup from the main search results.

#### NEW QUESTION # 60

Which of the following functions' primary purpose is to convert epoch time to a string format?

- A. tonumber
- **B. strftime**
- C. tostring
- D. strptime

**Answer: B**

Explanation:

The `strftime` function in Splunk is used to convert epoch time into a human-readable string format. It takes an epoch time value and a format string as arguments and returns the time as a formatted string. Other options, like `strptime`, convert string representations of time into epoch format, while `tostring` converts values to strings, and `tonumber` converts values to numbers.

#### NEW QUESTION # 61

which function of the stats command creates a multivalue entry?

- A. eval
- B. mvcombine
- **C. list**
- D. makemv

**Answer: C**

#### NEW QUESTION # 62

.....
