

100% Pass 2026 CompTIA The Best Pass Leader CAS-005 Dumps

DOWNLOAD the newest TopExamCollection CAS-005 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1aOvPS-axfDo6DLW5NXHhrTc_Z873RNRH

For starters and professionals CompTIA SecurityX Certification Exam play a significant role to verify skills, experience, and knowledge in a specific technology. Enrollment in the CompTIA SecurityX Certification Exam CAS-005 is open to everyone. Upon completion of CompTIA SecurityX Certification Exam CAS-005 Exam Questions' particular criteria. Participants in the CAS-005 Questions come from all over the world and receive the credentials for the CompTIA SecurityX Certification Exam CAS-005 Questions. They can quickly advance their careers in the fiercely competitive market and benefit from certification after earning the CAS-005 Questions badge. However, passing the CompTIA SecurityX Certification Exam CAS-005 is the primary concern.

Our CompTIA SecurityX Certification Exam study question is compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the CompTIA SecurityX Certification Exam test practice dump and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our CAS-005 Exam Questions are real-exam-based and convenient for the clients to prepare for the exam.

>>> Pass Leader CAS-005 Dumps <<<

New Pass Leader CAS-005 Dumps 100% Pass | Valid CAS-005: CompTIA SecurityX Certification Exam 100% Pass

We aim to provide our candidates with real CompTIA vce dumps and learning materials to help you pass real exam with less time and money. Our valid CAS-005 top questions are written by our IT experts who are specialized in CAS-005 Study Guide for many years and check the updating of CAS-005 vce files everyday to make sure the best preparation material for you.

CompTIA CAS-005 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Security Architecture: This domain focuses on analyzing requirements to design resilient systems, including the configuration of firewalls and intrusion detection systems.
Topic 2	<ul style="list-style-type: none"> • Security Engineering: This section measures the skills of CompTIA security architects that involve troubleshooting common issues related to identity and access management (IAM) components within an enterprise environment. Candidates will analyze requirements to enhance endpoint and server security while implementing hardware security technologies. This domain also emphasizes the importance of advanced cryptographic concepts in securing systems.
Topic 3	<ul style="list-style-type: none"> • Governance, Risk, and Compliance: This section of the exam measures the skills of CompTIA security architects that cover the implementation of governance components based on organizational security requirements, including developing policies, procedures, and standards. Candidates will learn about managing security programs, including awareness training on phishing and social engineering.
Topic 4	<ul style="list-style-type: none"> • Security Operations: This domain is designed for CompTIA security architects and covers analyzing data to support monitoring and response activities, as well as assessing vulnerabilities and recommending solutions to reduce attack surfaces. Candidates will apply threat-hunting techniques and utilize threat intelligence concepts to enhance operational security.

CompTIA SecurityX Certification Exam Sample Questions (Q222-Q227):

NEW QUESTION # 222

An organization that performs real-time financial processing is implementing a new backup solution. Given the following business requirements?

- * The backup solution must reduce the risk for potential backup compromise
- * The backup solution must be resilient to a ransomware attack.
- * The time to restore from backups is less important than the backup data integrity
- * Multiple copies of production data must be maintained

Which of the following backup strategies best meets these requirements?

- A. Enabling remote journaling on the databases to ensure real-time transactions are mirrored
- **B. Creating a secondary, immutable storage array and updating it with live data on a continuous basis**
- C. Setting up antitempering on the databases to ensure data cannot be changed unintentionally
- D. Utilizing two connected storage arrays and ensuring the arrays constantly sync

Answer: B

Explanation:

- * A. Creating a secondary, immutable storage array and updating it with live data on a continuous basis:

An immutable storage array ensures that data, once written, cannot be altered or deleted. This greatly reduces the risk of backup compromise and provides resilience against ransomware attacks, as the ransomware cannot modify or delete the backup data. Maintaining multiple copies of production data with an immutable storage solution ensures data integrity and compliance with the requirement for multiple copies.

Other options:

- * B. Utilizing two connected storage arrays and ensuring the arrays constantly sync: While this ensures data redundancy, it does not provide protection against ransomware attacks, as both arrays could be compromised simultaneously.
- * C. Enabling remote journaling on the databases: This ensures real-time transaction mirroring but does not address the requirement for reducing the risk of backup compromise or resilience to ransomware.
- * D. Setting up anti-tampering on the databases: While this helps ensure data integrity, it does not provide a comprehensive backup solution that meets all the specified requirements.

References:

- * CompTIA Security+ Study Guide
- * NIST SP 800-209, "Security Guidelines for Storage Infrastructure"
- * "Immutable Backup Architecture" by Veeam

NEW QUESTION # 223

An external SaaS solution user reports a bug associated with the role-based access control module. This bug allows users to bypass

system logic associated with client segmentation in the multitenant deployment model. When assessing the bug report, the developer finds that the same bug was previously identified and addressed in an earlier release. The developer then determines the bug was reintroduced when an existing software component was integrated from a prior version of the platform. Which of the following is the best way to prevent this scenario?

- **A. Regression testing**
- B. Software composition analysis
- C. Automated test and retest
- D. User acceptance testing
- E. Code signing

Answer: A

Explanation:

Regression testing is a software testing practice that ensures that recent code changes have not adversely affected existing functionalities. In this scenario, the reintroduction of a previously fixed bug indicates that changes or integrations brought back the old issue. Implementing comprehensive regression testing would help detect such reintroductions by systematically retesting the existing functionalities whenever changes are made to the codebase. This practice is crucial in maintaining the integrity of the application, especially in complex systems where multiple components interact.

NEW QUESTION # 224

The material finding from a recent compliance audit indicate a company has an issue with excessive permissions. The findings show that employees changing roles or departments results in privilege creep.

Which of the following solutions are the best ways to mitigate this issue? (Select two).

Setting different access controls defined by business area

- A. Requiring periodic job rotation
- B. Designing a least-needed privilege policy
- **C. Implementing a role-based access policy**
- **D. Performing periodic access reviews**
- E. Establishing a mandatory vacation policy

Answer: C,D

Explanation:

To mitigate the issue of excessive permissions and privilege creep, the best solutions are:

Implementing a Role-Based Access Policy:

Role-Based Access Control (RBAC): This policy ensures that access permissions are granted based on the user's role within the organization, aligning with the principle of least privilege. Users are only granted access necessary for their role, reducing the risk of excessive permissions.

NEW QUESTION # 225

An organization is planning for disaster recovery and continuity of operations, and has noted the following relevant findings:

1. A natural disaster may disrupt operations at Site A, which would then cause an evacuation. Users are unable to log into the domain from their workstations after relocating to Site B.
2. A natural disaster may disrupt operations at Site A, which would then cause the pump room at Site B to become inoperable.
3. A natural disaster may disrupt operations at Site A, which would then cause unreliable internet connectivity at Site B due to route flapping.

INSTRUCTIONS

Match each relevant finding to the affected host by clicking on the host name and selecting the appropriate number.

For findings 1 and 2, select the items that should be replicated to Site B. For finding 3, select the item requiring configuration changes, then select the appropriate corrective action from the drop-down menu.

Select the appropriate corrective action for finding 3:

Select corrective action

- Select corrective action
- Modify the BGP configuration
- Update the firmware version
- Integrate a WAF
- Synchronize the SIEM database
- Increase the bandwidth at the site
- Update the SCADA master controller software
- Implement AV software

Relevant findings

- A natural disaster may disrupt operations at Site A, which would then cause an evacuation. Users are unable to log into the domain from their workstations after relocating to Site B.

Select this for the item that should be replicated to Site B.
- A natural disaster may disrupt operations at Site A, which would then cause the pump room at Site B to become inoperable.

Select this for the item that should be replicated to Site B.
- A natural disaster may disrupt operations at Site A, which would then cause unreliable Internet connectivity at Site B due to route flapping.

Select this for the item requiring configuration changes.

Answer:

Explanation:

See the complete solution below in Explanation:

Explanation:

Matching Relevant Findings to the Affected Hosts:

Finding 1:

Affected Host: DNS

Reason: Users are unable to log into the domain from their workstations after relocating to Site B, which implies a failure in domain

name services that are critical for user authentication and domain login.

Finding 2:

Affected Host: Pumps

Reason: The pump room at Site B becoming inoperable directly points to the critical infrastructure components associated with pumping operations.

Finding 3:

Affected Host: VPN Concentrator

Reason: Unreliable internet connectivity at Site B due to route flapping indicates issues with network routing, which is often managed by VPN concentrators that handle site-to-site connectivity.

Corrective Actions for Finding 3:

Finding 3 Corrective Action:

Action: Modify the BGP configuration

Reason: Route flapping is often related to issues with Border Gateway Protocol (BGP) configurations.

Adjusting BGP settings can stabilize routes and improve internet connectivity reliability.

Replication to Site B for Finding 1:

Affected Host: DNS

Domain Name System (DNS) services are essential for translating domain names into IP addresses, allowing users to log into the network. Replicating DNS services ensures that even if Site A is disrupted, users at Site B can still authenticate and access necessary resources.

Replication to Site B for Finding 2:

Affected Host: Pumps

The operation of the pump room is crucial for maintaining various functions within the infrastructure.

Replicating the control systems and configurations for the pumps at Site B ensures that operations can continue smoothly even if Site A is affected.

Configuration Changes for Finding 3:

Affected Host: VPN Concentrator

Route flapping is a situation where routes become unstable, causing frequent changes in the best path for data to travel. This instability can be mitigated by modifying BGP configurations to ensure more stable routing.

VPN concentrators, which manage connections between sites, are typically configured with BGP for optimal routing.

References:

CompTIA Security+ Study Guide: This guide provides detailed information on disaster recovery and continuity of operations, emphasizing the importance of replicating critical services and making necessary configuration changes to ensure seamless operation during disruptions.

CompTIA Security+ Exam Objectives: These objectives highlight key areas in disaster recovery planning, including the replication of critical services and network configuration adjustments.

Disaster Recovery and Business Continuity Planning (DRBCP): This resource outlines best practices for ensuring that operations can continue at an alternate site during a disaster, including the replication of essential services and network stability measures.

By ensuring that critical services like DNS and control systems for pumps are replicated at the alternate site, and by addressing network routing issues through proper BGP configuration, the organization can maintain operational continuity and minimize the impact of natural disasters on their operations.

NEW QUESTION # 226

A global organization wants to manage all endpoint and user telemetry. The organization also needs to differentiate this data based on which office it is correlated to. Which of the following strategies best aligns with this goal?

- A. Centralized logging
- **B. Data labeling**
- C. Continuous monitoring
- D. Sensor placement

Answer: B

Explanation:

Comprehensive and Detailed Explanation:

Managing telemetry and differentiating it by office requires a way to categorize data. Let's evaluate:

* A. Sensor placement: Useful for data collection but doesn't inherently differentiate by office.

* B. Data labeling: Assigns metadata (e.g., office location) to telemetry, enabling differentiation. This aligns with CAS-005's focus on data management for security operations.

* C. Continuous monitoring: Ensures ongoing data collection but doesn't address differentiation.

NEW QUESTION # 227

.....

If you want to improve yourself and make progress, if you are not satisfied with your present job, if you are still staying up for the CAS-005 exam day and night, please use our CAS-005 study materials. For with the high pass rate as 98% to 100%, we are confident to claim that our high quality and high efficiency of our CAS-005 Exam Torrent is unparalleled in the market. We provide the latest and exact CAS-005 exam quiz to our customers and you will be grateful if you choose our exam torrent and gain what you are expecting in the shortest time.
