多くの時間とお金がいらなくて20時間だけあって楽に一回にSAPのC-ACDET-2506認定試験を合格できます。CertShikenが提供したSAPのC-ACDET-2506試験問題と解答が真実の試験の練習問題と解答は最高の相似性があります。

## SAP C-ACDET-2506 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"><li>• Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.</li></ul>
トピック 2	<ul style="list-style-type: none"><li>• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.</li></ul>

トピック 3	<ul style="list-style-type: none"> <li>• <b>Field Configuration:</b> This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.</li> </ul>

## C-ACDET-2506勉強の資料 & C-ACDET-2506学習範囲

弊社SAPの資料を使用すると、最短でSAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suiteの最高の質問トレントを習得し、他のことを完了するための時間とエネルギーを節約できます。最も重要なのは、C-ACDET-2506学習資料を安全にダウンロード、インストール、CertShiken使用できることです。製品にウイルスがないことを保証できます。それだけでなく、最高のサービスと最高のSAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite試験トレントを提供し、製品の品質が良好であることを保証できます。そのため、購入後はお気軽にご利用ください。お金を無駄にさせません。

## SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite 認定 C-ACDET-2506 試験問題 (Q18-Q23):

### 質問 # 18

When you create a custom field, how do you define where the field is added?

- A. The field is added to a class, identified by a class name
- B. The field is added to a project header, identified by the templateClass ID
- C. The field is added to a class, identified by the record ID
- D. Each field can be linked to multiple screens, identified via UI GroupClass ID

正解: A

### 質問 # 19

You have a custom string field with a list of values. The values are represented as an Enumeration. Which of the following applies?

- A. The display order in the drop down matches the order defined in the enumeration file
- B. The user can filter the values using the search box in the chooser
- C. In the enumeration file, the Value column must only contain whole numbers
- D. The display order of the values is alphabetical

正解: A

### 解説:

For single-select enumeration fields, the dropdown list order in SAP Ariba exactly follows the order in which values are defined in the enumeration file, not alphabetical. Alphabetical sorting applies only to multi-select chooser fields. The Value column can be text or integers depending on field type, and search/filter boxes are available only on chooser (multi-select) fields, not single-select dropdowns.

### 質問 # 20

Which Activate phase is tied to performing configurations in your SAP Ariba Strategic Sourcing suite solution?

- A. Deploy
- B. Configure
- C. Setup
- D. Realize

正解: D

解説:

The Realize phase is where the core configuration activities happen. During Realize, the project team sets up system parameters, creates templates, defines master data fields, and configures business processes in the SAP Ariba Strategic Sourcing suite. This phase includes building, unit testing, and preparing the system for user acceptance testing. Deploy is focused on cutover and go-live, while Configure and Setup are not formal SAP Activate phases for Ariba.

質問 # 21

When you create a custom field, how do you define where the field is added?

- A. The field is added to a class, identified by a class name
- B. The field is added to a project header, identified by the templateClass ID
- C. The field is added to a class, identified by the record ID
- D. Each field can be linked to multiple screens, identified via UI GroupClass ID

正解: A

解説:

In SAP Ariba, custom fields are associated with a specific class identified by its class name, such as ContractWorkspace or ProcureLineItem. This class-level association determines where the field is available within the application. When added to a parent class, the field inherits to all its subclasses, affecting all relevant data objects. The field is not linked via UI group IDs, project templates, or record IDs, which relate to different configuration aspects. This class-based design supports consistent data models and inheritance in SAP Ariba's architecture.

質問 # 22

Which read-only files show the key and English translations for custom field labels and helptips?

- A. The customerResource files that can be exported through ICM
- B. The JSON files that can be exported through ICM
- C. The customerResource files that can be exported through AML & Translations Upload
- D. The JSON files that can be exported through AML & Translations Upload

正解: D

解説:

SAP Ariba stores translations for custom field labels and help tips in JSON files exported and imported via AML (Advanced Metadata List) & Translations Upload. These JSON files contain key-value pairs representing the translation keys and their English or localized strings. This mechanism supports language management and bulk updates of translated content.

ICM exports configuration bundles but does not handle translation files in JSON format. CustomerResource files are not the standard format for translation export/import.

Using AML & Translations Upload allows administrators to maintain and update translations across multiple languages efficiently, ensuring consistent user experience in multi-lingual deployments.
