## Training Course “Developing on AWS” By AWS Training

**This course is the perfect preparation options for software developers willing to get ready for the AWS exam. During this training, candidates will learn about setting up AWS SDK to create secure cloud applications. They will also learn more about amazing ways to interact with AWS using the codes and troubleshooting tips. Generally, this course is a complete package that covers the next objectives:**

- Integrating data and applications using Amazon API Gateway, Amazon Simple Notification Service, AWS Step functions, and Amazon Queue Service
- Interacting with AWS services and developing solutions using AWS SDK
- Deploying applications on AWS with the CD/CI pipeline
- Using Amazon ElastiCache to enhance the application scalability
- Setting up developer credentials and SDK for Python, JavaScript, C#/.NET, etc.

This course is classroom-based which allows one to surely gain hands-on experience in the above-mentioned subjects. The applicants also get a chance to join labs for practicing with the AWS applications. These practical labs provide you a space to work with experts and learn from them.

Furthermore, note that AWS provides two more official training options. These are the courses called AWS Technical Essentials and Advanced Developing on AWS. The first one is also held in an in-classroom format, lasts for one day, and is suitable for not only developers but also SysOps admins and solutions architects. The second course has a duration of three days and can be attended either offline or through the virtual classroom.

### NEW QUESTION # 190

An application under development is required to store hundreds of video files. The data must be encrypted within the application prior to storage, with a unique key for each video file.

How should the Developer code the application?

- A. Use the KMS GenerateDataKey API to get a data key. Encrypt the data with the data key. Store the encrypted data key and data.
- B. Upload the data to an S3 bucket using server side-encryption with an AWS KMS key.
- C. Use the KMS Encrypt API to encrypt the data. Store the encrypted data key and data.
- D. Use a cryptography library to generate an encryption key for the application. Use the encryption key to encrypt the data. Store the encrypted data.

**Answer: A**

Explanation:

Explanation

Refer AWS documentation - KMS GenerateDataKey

Returns a data encryption key that you can use in your application to encrypt data locally.

You must specify the customer master key (CMK) under which to generate the data key. You must also specify the length of the data key using either the field. You must specify one field or the other, but not both. For common key lengths (128-bit and 256-bit symmetric keys), we recommend that you use KeySpec. To perform this operation on a CMK in a different AWS account, specify the key ARN or alias ARN in the value of the KeyId parameter.

This operation returns a plaintext copy of the data key in the field of the response, and an encrypted copy of the data key in the CiphertextBlob encrypted under the CMK specified in the KeyId field of the request.

#### NEW QUESTION # 191

- A. Cross-Account Access
- **B. Web Identity Federation**
- C. AWS IAM users
- D. SAML-based Identity Federation

**Answer: B**

#### NEW QUESTION # 192

When using a large Scan operation in DynamoDB, what technique can be used to minimize the impact of a scan on a table's provisioned throughput?

- A. Set a smaller page size for the scan
- B. Prewarm the table by updating all items
- C. Use parallel scans
- **D. Define a range index on the table**

**Answer: D**
