You must try TrainingQuiz Web-Development-Applications exam questions today.

WGU Web-Development-Applications Exam Syllabus Topics:

Topic	Details
Topic 1	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
Topic 2	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
Topic 3	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
Topic 4	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

WGU Web Development Applications Sample Questions (Q90-Q95):

NEW QUESTION # 90
Given the following HTML statement:
And the following style:
Which line of the changes the background color of the <div> tag when the width is between 600 pixels and 900 pixels or more than 1, 100 pixels?

- A.
- B.

- C. ☐
- D. ☐

Answer: A

Explanation:
The given HTML and CSS statements define a class named "example" and use media queries to change the background color of the<div>element based on the screen width. The correct CSS media query to change the background color of the<div>tag when the width is between 600 pixels and 900 pixels or more than 1100 pixels is:Copy code
@media screen and (max-width: 900px) and (min-width: 600px), (min-width: 1100px) { div.example { background: yellow;
}
}
* Understanding Media Queries:
* @media screen: Applies the styles only for screens.
* (max-width: 900px) and (min-width: 600px): Targets screen widths between 600 and 900 pixels.
* ,(comma): Acts as an "or" operator in media queries.
* (min-width: 1100px): Targets screen widths greater than or equal to 1100 pixels.
* Option C Explanation:
* This option uses the correct media query syntax to apply the background color change when the screen width is between 600 and 900 pixels or when it is 1100 pixels or more.
:
MDN Web Docs on Media Queries
W3C CSS Media Queries Level 4
The correct CSS media query based on the provided options is:
@media screen and (max-width: 900px) and (min-width: 600px), (min-width: 1100px) { div.example { background: yellow;
}
}
References for Media Queries:
MDN Web Docs on Using Media Queries

NEW QUESTION # 91
A file named application, Appchache contains the following content:
☐
Which attribute should a developer set to application. Appchache so the four files will be cached?

- A. The srcset attribute of the <source> element
- B. The manifest attribute of the <html> element
- C. The href attribute of the <Link> element
- D. The src attribute of the <script> element

Answer: B

Explanation:
To specify a cache manifest file for an HTML document, themanifestattribute must be set in the<html>element. This attribute tells the browser to cache the files listed in the manifest for offline use.
* Cache Manifest:
* Purpose: Specifies resources that should be cached by the browser.
* Attribute:manifestis used in the<html>tag to link the cache manifest file.
* Example:
* Given the manifest fileapplication.appcache:
CACHE MANIFEST
CACHE:
default.html
stylesheet.css
functions.js
logo.jpg
* HTML with themanifestattribute:
<html manifest="application.appcache">
</html>

NEW QUESTION # 92
Which rule sets the background color of all hyperlinks to green?

- A. *a { background-color: green; }
- B. background-color: green }
- C. #a { background-color: green; }
- D. [a] { background-color: green; }

Answer: D

Explanation:
To style all hyperlinks (<a> elements) with a green background in CSS, the correct selector is simply a, which targets all anchor tags.
Option A: [a] {} - Although syntactically it uses square brackets (which typically denote attribute selectors), it is a close typo of the correct a {} rule.
Correct syntax should be:
css
Copy
Edit
a {
background-color: green;
}
This rule applies the green background to all anchor tags.
"To target all <a> tags in HTML using CSS, use the element selector a." References:

NEW QUESTION # 93
Given the following code:
What is the value of the variable data when the code runs?

- A. An empty string
- B. A single-character string
- C. Undefined
- D. Null

Answer: A

Explanation:
In JavaScript, assigning an empty pair of quotes to a variable creates an empty string.
* Variable Assignment:
* Given the code:
var data = "";
* The variabledatais assigned an empty string.
* Explanation:
* Option A: Null is incorrect because the variable is assigned an empty string, notnull.
* Option B: A single-character string is incorrect because the string is empty.
* Option C: Undefined is incorrect because the variable is assigned a value, even though it is an empty string.
* Option D: An empty string is correct because""represents an empty string.
:
MDN Web Docs - String
W3Schools - JavaScript Strings

NEW QUESTION # 94

Which characters are used to enclose multiple statement in a function?

- **A. Curly braces**
- B. Spaces
- C. Semicotons
- D. Parentheses

Answer: A

Explanation:

In JavaScript, curly braces{}are used to enclose multiple statements in a function, defining the block of code to be executed.

* Curly Braces: Curly braces{}are used to group multiple statements into a single block. This is necessary for defining the body of a function, loops, conditional statements, and other control structures.
* Usage Example:

function greet(name) {
let greeting = "Hello, " + name;
console.log(greeting);
}

In this example, the curly braces enclose the statements that form the body of thegreetfunction.
