The high quality product like our Salesforce Certified Education Cloud Consultant ED-Con-101 Real Exam has no need to advertise everywhere, the exam candidates are the best living and breathing ads.

Salesforce Certified Education Cloud Consultant Sample Questions (Q135-Q140):

NEW QUESTION # 135
A university is implementing Advisor Link and needs to test the integration with its Student Information System (SIS), and provide training space for advisors. The university needs access to some of the data from the production org for the advisor training.
Which two types of sandboxes meet this use case?
Choose 2 answers

- A. Full Sandbox
- B. Developer Sandbox
- C. Developer Pro Sandbox
- D. Partial Sandbox

Answer: A,D

Explanation:
Full Sandbox and Partial Sandbox are two types of sandboxes that meet this use case for the university that is implementing Advisor Link and needs to test the integration with its SIS, and provide training space for advisors. A sandbox is a copy of a production environment that allows users to develop, test, or train without affecting live data or operations. A Full Sandbox is a type of sandbox that copies all data and metadata from the production environment. A Partial Sandbox is a type of sandbox that copies all metadata and a sample of data from the production environment based on specified criteria. The university can use a Full Sandbox or a Partial Sandbox to test the integration with its SIS, and provide training space for advisors with access to some of the data from the production org. Developer Sandbox and Developer Pro Sandbox are not types of sandboxes that meet this use case for the university that is implementing Advisor Link and needs to test the integration with its SIS, and provide training space for advisors.

NEW QUESTION # 136

A consultant is writing an Apex class to run when a new Contact is created in a Salesforce environment where Education Data Architecture (EDA) is in use.

What should the consultant do to ensure the code executes in the order intended?

- A. Go to EDA Settings to set the order of execution.
- B. Use Table-Driven Trigger Management (TDTM) to set the order of execution.
- C. Write an Apex trigger to set the order of execution.

Answer: B

Explanation:

Table-Driven Trigger Management (TDTM) is a tool to manage the code in Salesforce and control how Apex behaves5. TDTM allows the consultant to easily rearrange the order of things via a table in the Salesforce interface (hence, the "Table-Driven" in TDTM)6. With TDTM, the consultant can tell the Apex trigger: do X first, then Y, then Z, without writing any code6. TDTM is part of the Education Data Architecture (EDA) and can be accessed from EDA Settings5. Reference:
5: Table-Driven Trigger Management (TDTM) Overview - Salesforce7
6: Table-Driven Trigger Management and Why it Matters8

NEW QUESTION # 137

A customer wants to install the Education Data Architecture (EDA) into their existing Salesforce org.

How should the consultant prepare for implementation?

- A. Choose a middleware tool to integrate EDA.
- B. Export all existing Salesforce data.
- C. Map Salesforce custom objects to EDA objects.
- D. Build applicable API customizations.

Answer: C

Explanation:

The consultant should map Salesforce custom objects to EDA objects to prepare for installing EDA into an existing Salesforce org. This means identifying which custom objects in the existing org have similar or equivalent functionality as EDA objects, and mapping their fields and relationships accordingly. This will help the consultant determine which custom objects can be replaced by EDA objects, which custom objects need to be integrated with EDA objects, and which custom objects need to be retained as they are. Choosing a middleware tool to integrate EDA, building applicable API customizations, and exporting all existing Salesforce data are not tasks that the consultant should do to prepare for installing EDA. NEW QUESTION # 138

A large university is planning to release a new recruitment and admissions solution using Salesforce. The university is closely evaluating a launch window in conjunction with the campus calendar.

Where should the university confirm the Salesforce product release dates that could impact the timeline?

- A. partner Community
- B. Setup Menu
- C. Salesforce Trust website
- D. Trailhead

Answer: C

Explanation:

The university can confirm the Salesforce product release dates that could impact the timeline on the Salesforce Trust website. The Salesforce Trust website provides information about the maintenance schedule, release calendar, and release readiness for Salesforce products. The university can use this information to plan their launch window in conjunction with the campus calendar. Trailhead, Setup Menu, and Partner Community are not places where the university can confirm the Salesforce product release dates. Reference:

https://status.salesforce.com/products/all/maintenances
https://trailhead.salesforce.com/en/content/learn/modules/salesforce-release-readiness-strategies

NEW QUESTION # 139
A consultant is considering disabling certain configurations to optimize the data import of a large volume of student records into a university's Salesforce environment with the Education Data.
Which configuration should the consultant retain during the data import?

- A. Sharing rules
- B. Role hierarchy
- C. Workflow rules

Answer: A

Explanation:
The consultant should retain sharing rules during the data import because they control the access and visibility of records based on criteria such as record ownership, role hierarchy, or field values. Disabling sharing rules may cause data security or privacy issues. Workflow rules and role hierarchy are configurations that can be disabled during the data import to improve performance and avoid errors or conflicts. Reference:
