## Pass Guaranteed Quiz 2026 Salesforce Plat-Dev-301: Salesforce Certified Platform Developer II - Multiple Choice Authoritative Actual Test Answers

You don't need to wait days or weeks to get your performance report. The software displays the result of the Salesforce Plat-Dev-301 practice test immediately, which is an excellent way to understand which area needs more attention. ITdumpsfree Salesforce Plat-Dev-301 exam dumps save your study and preparation time. Our experts have added hundreds of Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) questions similar to the real exam. You can prepare for the Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam dumps during your job. You don't need to visit the market or any store because ITdumpsfree Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam questions are easily accessible from the website. You can try the Salesforce Plat-Dev-301 exam dumps demo before purchasing.

## Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q101-Q106):

### NEW QUESTION # 101

A developer is asked to build a solution that will automatically send an email to the customer when an Opportunity stage changes. The solution must scale to allow for 10,000 emails per day. The criteria to send the email should be evaluated after certain conditions are met.

What is the optimal way to accomplish this?

- A. Use SingleEmailMessage() with an Apex trigger.
- **B. Use an Email Alert with Flow Builder.**
- C. Use MassEmailMessage () With an Apex trigger.
- D. Use a Workflow Email Alert.

**Answer: B**

Explanation:

Using an Email Alert with Flow Builder allows for scalable solutions that can handle large volumes of emails, and it offloads the processing from Apex to Salesforce's declarative automation tools. This approach is also bulk-safe, as it does not rely on Apex code that could hit governor limits.

### NEW QUESTION # 102

A developer created the following test method:

The developer org has five accounts where the name starts with "Test". The developer executes this test in the Developer Console. After the test code runs, which statement is true?

- A. There will be five accounts where the name starts with "Test".
- B. There will be no accounts where the name starts with "Test".
- **C. The test will fail.**
- D. There will be six accounts where the name starts with "Test".

**Answer: C**

Explanation:

Since the SeeAllData=true annotation is used, the test class does not have its own test data and is relying on the data in the org. The org already has accounts with the name starting with "Test", so the assertion that no accounts should exist after the deletion will fail because the test method only deletes the account that was created within its scope.

Apex Developer Guide

### NEW QUESTION # 103

A developer is working with existing functionality that tracks how many times a stage has changed for an Opportunity. When the Opportunity's stage is changed, a workflow rule is fired to increase the value of a field by one. The developer wrote an after trigger to create a child record when the field changes from 4 to 5.

A user changes the stage of an Opportunity and manually sets the count field to 4. The count field updates to 5, but the child record is not created.

What is the reason this is happening?

- **A. Trigger.old does not contain the updated value of the count field.**
- B. After triggers are not fired after field updates.
- C. After triggers fire before workflow rules.
- D. Trigger.new does not change after a field update.

**Answer: A**

Explanation:

<https://help.salesforce.com/s/articleView?id=000384697&type=1>

### NEW QUESTION # 104

Which use case can be performed only by using asynchronous Apex?

- A. Updating a record after the completion of an insert
- B. Making a call to schedule a batch process to complete in the future
- C. Calling a web service from an Apex trigger
- D. Querying tens of thousands of records

**Answer: C**

Explanation:

Making a callout from an Apex trigger is not allowed synchronously; hence, such callouts must be performed in an asynchronous context. The only way to perform this within the Salesforce platform is by using asynchronous Apex, such as @future methods or Queueable Apex.

### NEW QUESTION # 105

Which tag should a developer use to display different text while an <apex:commandButton> is Processing an action?

- A. <apex:actionStatus>
- B. <apex:pageMessages>
- C. <apex:actionSupport>
- D. <apex:actionPoller>

**Answer: A**

Explanation:

The <apex:actionStatus> tag in Visualforce is used to display the status of an AJAX request, such as showing different text while a command button is processing an action.

### NEW QUESTION # 106

.....

Here, we provide you with Plat-Dev-301 accurate questions & answers which will be occurred in the actual test. About explanations, the difficult issues will be along with detail explanations, so that you can easy to get the content of our Salesforce Plat-Dev-301 pdf vce and have a basic knowledge of the key points. Besides, you can choose the Plat-Dev-301 Vce Format files for simulation test. It can help you enhance your memory and consolidate the knowledge, thus the successful pass is no longer a difficult thing.
