2026 Latest BraindumpsIT HPE7-A06 PDF Dumps and HPE7-A06 Exam Engine Free Share: <https://drive.google.com/open?id=1gapnGtQbvElmFDhtMeloE8Yi0khCsEtZ>

Our HPE Campus Access Switching Expert Written Exam study question is compiled and verified by the first-rate experts in the industry domestically and they are linked closely with the real exam. Our products' contents cover the entire syllabus of the exam and refer to the past years' exam papers. Our test bank provides all the questions which may appear in the real exam and all the important information about the exam. You can use the practice test software to test whether you have mastered the HPE Campus Access Switching Expert Written Exam test practice dump and the function of stimulating the exam to be familiar with the real exam's pace, atmosphere and environment. So our HPE7-A06 Exam Questions are real-exam-based and convenient for the clients to prepare for the exam.

People always want to prove that they are competent and skillful in some certain area. The ways to prove their competences are varied but the most direct and convenient method is to attend the HPE7-A06 certification exam and get some certificate. Passing the HPE7-A06 certification can prove that you are very competent and excellent and you can also master useful knowledge and skill through passing the HPE7-A06 test. Purchasing our HPE7-A06 guide torrent can help you pass the HPE7-A06 exam and it costs little time and energy.

HPE7-A06 Exam Cram Review - Intereactive HPE7-A06 Testing Engine

Getting tired of humdrum life, you may want to get some successful feeling or try something different instead. We all know that is of

important to pass the HPE7-A06 exam and get the HPE7-A06 certification for someone who wants to find a good job in internet area, and it is not a simple thing to prepare for exam. So you are in the right place now. The HPE7-A06 practice materials are a great beginning to prepare your exam. Actually, just think of our HP practice materials as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q88-Q93):

NEW QUESTION # 88

Match the customer requirement with the relevant commands.

□

Answer:

Explanation:

□

Explanation:

* Aggregate links across multiple switches -->

vsx

role primary

inter-switch-link lag 256

keepalive peer 192.168.0.1 source 192.168.0.0 vrf KA

(Snippet 4)

* Establish redundant links between the aggregation and core layers --> router ospf 1 maximum-paths 2 (Snippet 2)

* Extend layer 2 across multiple sites -->

interface vxlan 1

no shutdown

source ip 10.1.0.4

(Snippet 1)

* Identify individual layer 2 segments in an overlay -->

vni 11

vtep-peer 10.1.0.5

vlan 11

(Snippet 3)

Comprehensive Detailed Explanation along with All References available from related to the HPE Campus Access Switching Expert certification objectives at end of each question below:

* Aggregate links across multiple switches: This requirement describes Multi-Chassis Link Aggregation (MC-LAG), where a device forms a LAG to two separate upstream switches that act as a logical pair. In AOS-CX, VSX (Virtual Switching Extension) enables this functionality. Snippet 4 shows commands related to setting up VSX (vsx, role primary, inter-switch-link, keepalive), which is the foundation for MC-LAG.

References: AOS-CX VSX Guide. Relates to "Network Resiliency and virtualization" (8%), "Switching" (19%).

Establish redundant links between the aggregation and core layers: This often involves Layer 3 routing protocols utilizing multiple paths. Snippet 2 (router ospf 1, maximum-paths 2) configures OSPF to use up to two Equal Cost Multi-Paths (ECMP). If redundant links between aggregation and core result in equal OSPF costs, this command enables load sharing and redundancy at Layer 3.

References: AOS-CX IP Routing Guide (OSPF, ECMP). Relates to "Routing" (16%), "Network Resiliency and virtualization" (8%).

Extend layer 2 across multiple sites: VXLAN (Virtual Extensible LAN) is the standard overlay technology for extending Layer 2 segments over an underlying Layer 3 network, enabling L2 adjacency across different physical locations (sites, racks, pods). Snippet 1 shows the basic configuration of a VXLAN tunnel interface (interface vxlan 1, source ip), which is the core component for VXLAN tunneling.

References: AOS-CX VXLAN Guide. Relates to "Switching" (19%), "Connectivity" (9%).

Identify individual layer 2 segments in an overlay: Within a VXLAN overlay, each separate Layer 2 broadcast domain (typically corresponding to a VLAN) is identified by a unique VXLAN Network Identifier (VNI). This VNI tags the encapsulated traffic. Snippet 3 shows the configuration associating VNI 11 with the local VLAN 11 (vni 11, vlan 11). The vtep-peer command is relevant when using EVPN as the control plane.

This configuration directly maps an L2 segment (VLAN 11) to its identifier (VNI 11) within the overlay.

References: AOS-CX EVPN Guide, AOS-CX VXLAN Guide. Relates to "Switching" (19%), "Connectivity" (9%).

NEW QUESTION # 89

Applying the command "ip igmp snooping blocked VLAN 6. 6" on a port ...

- A. won't accept multicast Igmp joins on that port or VLAN 5 and 6.
- B. won't allow multicast on that port in VLAN 5 and 6 and disables the port.
- C. won't allow multicast traffic between VLAN 5 and 6.
- D. won't prune multicast on that port on VLAN 5 and 6

Answer: A

Explanation:

The question asks for the effect of applying the command `ip igmp snooping blocked vlan 5,6` on a switch port.

* `ip igmp snooping blocked vlan <vlan-list>`: This interface configuration command instructs the IGMP snooping process on the switch to block (ignore/drop) any inbound IGMP control packets (specifically Membership Reports, i.e., "joins", and Leave messages) received on this port for the specified VLANs (5 and 6 in this case).

* Effect: By blocking IGMP join messages from hosts connected to this port, the switch will not learn about any multicast group memberships requested by those hosts in VLANs 5 and 6. Consequently, the switch will not forward multicast traffic for those groups out of this port for those VLANs (unless the port is designated as a multicast router port). It effectively prevents hosts on this port from receiving multicast streams in the specified VLANs via standard IGMP mechanisms.

* Analysis of Options:

* A: It results in traffic effectively being pruned because memberships aren't learned, but the command itself blocks the IGMP control packets (joins).

* B: Correct. It stops the switch from accepting IGMP join messages on this port for VLANs 5 and 6.

* C: Incorrect. It doesn't control inter-VLAN traffic.

* D: Incorrect. It doesn't disable the entire port.

* Conclusion: The command specifically blocks the reception and processing of IGMP join messages on the configured port for the listed VLANs.

References: AOS-CX Multicast Guide (IGMP Snooping configuration commands). This relates to the "Switching" (19%) objective.

NEW QUESTION # 90

You have configured BGP peering from a CX 8325 switch to a third-party router. The remote router is reachable via ping but you are not able to get the configuration to an established state.

Based on the BGP debug:

What is preventing the BGP neighbor state from becoming the established state?

- A. The remote router is not negotiating with the local router
- B. The remote router is configured with router-id 10.1.0.2
- C. The remote router is configured with router-id 10.1.0.4
- D. The remote router has no router-id configured

Answer: D

Explanation:

The debug output shows the Remote BGP ID as 0.0.0.0, which indicates that the remote router has no router-id configured. BGP requires a valid router-id (a non-zero IP address) for session establishment. Without it, the BGP session cannot progress to the Established state.

NEW QUESTION # 91

A customer deployment with 40 locations and an average of 500 access points per location is being deployed in HPE Aruba Networking Central. Gateways are used to tunnel the traffic for each location and should be detected and built automatically. What is the correct approach for the cluster setup?

- A. Automatic: Auto Group
- B. Manual: Auto Cluster
- C. Automatic: Auto Site
- D. Manual: Auto Config

Answer: C

Explanation:

In large multi-site deployments, HPE Aruba Networking Central supports Automatic: Auto Site for gateway clustering. This allows gateways to be automatically detected, grouped by site, and clustered without manual intervention - ideal for scaling across 40 locations with hundreds of APs per site.

NEW QUESTION # 92

A client would like to use the HPE Aruba Networking Switch MultiEdit Software function in HPE Aruba Networking Central. Which option is available?

- A. Run the same NAE scripts for selected switches.
- **B. Use CLI scripts and apply them to selected switches.**
- C. Apply a configuration to an interface range for selected switches.
- D. Use templates and apply them to selected switches.

Answer: B

Explanation:

The MultiEdit function in HPE Aruba Networking Central allows administrators to push CLI scripts and apply them to selected switches in bulk. This provides flexibility to make consistent configuration changes across multiple devices simultaneously.

NEW QUESTION # 93

.....

If you buy HPE7-A06 study materials, you will get more than just a question bank. You will also get our meticulous after-sales service. The purpose of the HPE7-A06 study materials' team is not to sell the materials, but to allow all customers who have purchased HPE7-A06 study materials to pass the exam smoothly. The trust and praise of the customers is what we most want. We will accompany you throughout the review process from the moment you buy HPE7-A06 Study Materials. We will provide you with 24 hours of free online services. All our team of experts and service staff are waiting for your mail all the time.
