## Microsoft AZ-700 Valid Test Sample | Valid AZ-700 Test Dumps

We provide a wide range of learning and preparation methodologies to the customers for the Microsoft AZ-700 complete training. After using the Microsoft AZ-700 exam materials, success would surely be the fate of customer because, self-evaluation, highlight of the mistakes, time management and sample question answers in comprehensive manner, are all the tools which are combined to provide best possible results. AZ-700 Exam Materials are also offering 100% money back guarantee to the customers in case they don't achieve passing scores in the AZ-700 exam in the first attempt.

### Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q75-Q80):

#### NEW QUESTION # 75

You have an Azure subscription that contains a virtual network named VNet1. VNet1 contains the resources shown in the following table.

You need to publish App1 by using AG1 and a URL of <https://app1.contoso.com>. The solution must meet the following requirements:

- \* TLS connections must terminate on AG1.
- \* Minimize the number of targets in the backend pool of AG1.
- \* Minimize the number of deployed copies of the SSL certificate of App1.

How many locations should you import to the certificate, and how many targets should you add to the backend pool of AG1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

#### NEW QUESTION # 76

You have an Azure virtual network named VNet1 that contains the subnets shown in the following table.

You need to deploy an Azure application gateway named AppGW1 to VNet1.

To where can you deploy AppGW1?

- A. Subnet2 or GatewaySubnet only
- B. Subnet1, Subnet2, and GatewaySubnet
- C. Subnet1 or Subnet2 only
- D. GatewaySubnet only
- E. Subnet2 only

**Answer: C**

Explanation:

A dedicated subnet is required for the application gateway. You can have multiple instances of a given application gateway deployment in a subnet. You can also deploy other application gateways in the subnet. But you can't deploy any other resource in the application gateway subnet. You can't mix v1 and v2 Azure Application Gateway SKUs on the same subnet.

#### NEW QUESTION # 77

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure subscription that contains an Azure Virtual WAN named VWAN1. VWAN1 contains a hub named Hub1. Hub1 has a security status of Unsecured.

You need to ensure that the security status of Hub1 is marked as Secured.

Solution: You implement Azure Firewall.

Does this meet the requirement?

- A. Yes
- B. No

**Answer: A**

### NEW QUESTION # 78

You need to provide connectivity to storage1. The solution must meet the PaaS networking requirements and the business requirements.

What should you include in the solution?

- A. a private endpoint
- B. Azure Front Door
- C. Azure Traffic Manager
- D. a service endpoint

**Answer: C**

Explanation:

Topic 2, Contoso Case Study 2

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Existing Environment:

Azure Network Infrastructure

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com.

The Azure subscription contains the virtual networks shown in the following table.

□ Vnet1 contains a virtual network gateway named GW1.

Azure Virtual Machines

The Azure subscription contains virtual machines that run Windows Server 2019 as shown in the following table.

□ The NSGs are associated to the network interfaces on the virtual machines. Each NSG has one custom security rule that allows RDP connections from the internet. The firewall on each virtual machine allows ICMP traffic.

An application security group named ASG1 is associated to the network interface of VM1.

Azure Private DNS Zones

The Azure subscription contains the Azure private DNS zones shown in the following table.

□ Zone1.contoso.com has the virtual network links shown in the following table.

□ Other Azure Resources

The Azure subscription contains additional resources as shown in the following table.

□ Requirements:

Virtual Network Requirements

Contoso has the following virtual networks requirements:

\* Create a virtual network named Vnet6 in West US that will contain the following resources and configurations:

Two container groups that connect to Vnet6

Three virtual machines that connect to Vnet6

Allow VPN connections to be established to Vnet6

Allow the resources in Vnet6 to access KeyVault1, DB1, and Vnet1 over the Microsoft backbone network

- \* The virtual machines in Vnet4 and Vnet5 must be able to communicate over the Microsoft backbone network.
- \* A virtual machine named VM-Analyze will be deployed to Subnet1. VM-Analyze must inspect the outbound network traffic from Subnet2 to the internet.

#### Network Security Requirements

Contoso has the following network security requirements:

- \* Configure Azure Active Directory (Azure AD) authentication for Point-to-Site (P2S) VPN users.
- \* Enable NSG flow logs for NSG3 and NSG4.
- \* Create an NSG named NSG10 that will be associated to Vnet1/Subnet1 and will have the custom inbound security rules shown in the following table.
- \* Create an NSG named NSG11 that will be associated to Vnet1/Subnet2 and will have the custom outbound security rules shown in the following table.

#### NEW QUESTION # 79

You need to meet the network security requirements for the NSG flow logs.

Which type of resource do you need, and how many instances should you create? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

#### Answer:

Explanation:

#### NEW QUESTION # 80

.....

We are professional at providing best and valid AZ-700 exam materials to help the candidates successfully pass their AZ-700 exams with ease as well as establish their confidence. The precise and valid AZ-700 exam torrent compiled by our experts is outstanding and tested by our clients all over the world. The numerous feedbacks from our clients proved our influence and charisma. We can provide you the fastest way to get your dreaming AZ-700 Certification.

**AZ-700 Valid Test Sample:** <https://www.prep4sureexam.com/AZ-700-dumps-torrent.html>
