Valid LEED-Green-Associate Practice Questions, LEED-Green-Associate Latest Dumps

We can say that how many the LEED-Green-Associate certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the LEED-Green-Associate exam guide is committed to helping you become a competitive workforce, let you have no trouble back at home. Actually, just think of our LEED-Green-Associate Test

Prep as the best way to pass the LEED-Green-Associate exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

USGBC LEED Green Associate Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

The interior of a hotel is under renovation. The project designer would like to incorporate adaptive reuse. Which of the following strategies would accomplish this goal?

- A. Reuse the current wood floors as wall panels
- B. Convert the rooms into residential apartments
- C. Use reconditioned office equipment
- D. Relocate to a used building

Answer: A

Explanation:

Adaptive reuse focuses on repurposing existing materials or elements to reduce construction waste and resource use. Reusing wood floors as wall panels exemplifies this principle, aligning with LEED credits under Materials and Resources.

NEW QUESTION # 22

Which of the following water types is suitable for drinking?

- A. Graywater
- B. Potable water
- C. Greenwater
- D. Stormwater

Answer: B

Explanation:

Potable water is water that is suitable for drinking. Potable water meets or exceeds the Environmental Protection Agency's (EPA) drinking water quality standards and is free of contaminants that are harmful to human health. The other options are not suitable for drinking. Graywater is wastewater from sinks, showers, and laundry that can be reused for non-potable purposes such as toilet flushing and irrigation. Greenwater is rainwater that is collected and stored for non-potable uses. Stormwater is runoff from precipitation that can carry pollutants and sediments into waterways. Reference: LEED Green Associate Candidate Handbook, page 26; USGBC, [Water Efficiency], page 2.

NEW QUESTION # 23

The protection and restoration of natural vegetation, wetland areas and bodies of water through building footprint consolidation helps to

- A. preserve open space and sensitive areas
- B. minimize hardscape
- C. support conservation programs
- D. prevent light pollution

Answer: A

Explanation:

The protection and restoration of natural vegetation, wetland areas and bodies of water through building footprint consolidation helps to preserve open space and sensitive areas, which are important for maintaining biodiversity, ecosystem services, and human well-being. Building footprint consolidation refers to the strategy of minimizing the area of land that is occupied by a building and its associated infrastructure, such as roads, parking lots, and utilities. By reducing the building footprint, project teams can avoid or minimize the impacts of development on natural habitats, wetlands, and water bodies, which often provide critical functions such as water quality improvement, flood control, wildlife habitat, and recreation. LEED v4.1 recognizes and rewards this strategy in the Sensitive Land Protection credit¹, which aims to conserve existing natural areas and restore damaged areas to provide habitat and promote biodiversity². NEW QUESTION # 24

Which type of water should be considered an alternative water source?

- A. Rainwater
- B. Potable water
- C. Dirty water
- D. Blackwater

Answer: A

Explanation:

Rainwater is considered an alternative water source because it is a sustainable source of water that is not supplied from fresh surface water or groundwater. Rainwater can be harvested from roofs or other surfaces and stored for later use. Rainwater can offset the demand for freshwater and reduce the pressure on water resources. Rainwater can be used for various purposes, such as irrigation, toilet flushing, cooling, and cleaning. LEED projects can earn credits for using alternative water sources under the Water Efficiency category. References: Best Management Practice #14: Alternative Water Sources1; LEED v4 BD+C Reference Guide, Water Efficiency, page 51

NEW QUESTION # 25

The design charrette team is pursuing LEED certification for a large commercial building with ample landscape area using native species and considering applicable credits. What combination of credits represents this synergy?

- A. Demand Response and Indoor Air Quality Assessment
- B. Site Assessment and Outdoor Water Use Reduction
- C. Advanced Energy Metering and Construction Indoor Air Quality Management Plan
- D. Heat Island Reduction and Thermal Comfort

Answer: B

Explanation:

This combination of credits supports ecosystem health and resource conservation. A site assessment informs sustainable design decisions, while reducing outdoor water use with native species minimizes irrigation needs, aligning with LEED goals.

NEW QUESTION # 26

.....

The LEED-Green-Associate PDF Questions of ActualCollection are authentic and real. These LEED Green Associate Exam (LEED-Green-Associate) exam questions help applicants prepare well prior to entering the actual LEED Green Associate Exam (LEED-Green-Associate) exam center.
