AZ-104 Practice test with complete solutions 100% Correct Answers 2023

Q1. Your company is planning to use Azure Container Instances to deploy simple cloud applications. You are tasked with determining if multi-container groups hosting multiple container instances meet your solution requirements.

You need to identify features and requirements for multi-container groups with each group hosting an application container, a logging container, and a monitoring container. For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Statement:

- 1- Multi-container groups support Linux containers only.
- 2- You can deploy a multi-container group from a Resource Manager template or a YAML file.
- 3- Container groups can scale up as necessary to create additional container instances as necessary. - ANSWER Answer: 1-Yes. 2-Yes. 3-No.

Explanation:

- 1- Yes. Multi-container groups support Linux containers only. This is a current restriction for multi-container groups. Windows Containers are limited to Azure Container Instances that support deployment of a single container instance only.
- 2- Yes. You can deploy a multi-container group from a Resource Manager template or a YAML file. It is recommended that you use a Resource Manager template when you need to deploy additional Azure resources when deploying container instances, and this is the preferred method for deploying multi-container groups.
- 3- No. Container groups and container instances do not support scaling. If additional container groups or container instances are needed, they must be explicitly created.

Q2. You create a FileStorage premium storage account and create a premium tier Azure file share. You plan to mount the file share directly on-premises using the Service Message Block (SMB) 3.0 protocol. You need to ensure that your network is configured to support mounting an Azure file share on-premises. You want to minimize the administrator effort necessary to accomplish this. What should you do?

- A-Create an ExpressRoute circuit.
 - B-Install and configure Azure File Sync.
 - C-Configure TCP port 445 as open in your on-premises internet firewall.
 - D-Configure TCP port 443 as open in your on-premises internet firewall. - ANSWER Answer: C
- Explanation:

What's more, part of that Prep4sureExam AZ-104 dumps now are free: https://drive.google.com/open?id=1Qa_TZ3WtxFjsULJbTC2jTtIb7leVnY3R

Our system will automatically deliver the newest version of our AZ-104 exam questions to you via email after you pay for them. So you will never have to worry that the exam questions and answers will be outdated one day for our experts are always keeping on updating the AZ-104 Study Materials to the most precise. As you can see, our AZ-104 exam simulation really deserves your selection. Do not be afraid of making positive changes. It will add more colors to your life.

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our AZ-104 Exam Torrent. Decades of painstaking efforts have put us in the leading position of AZ-104 training materials compiling market, and the excellent quality of our AZ-104 guide torrent and high class operation system in our company have won the common recognition from many international customers for us.

How I Prepared Microsoft AZ-104 Exam Questions In One Week? [2026]

The cost of registering a AZ-104 Certification is quite expensive, ranging between \$100 and \$1000. After paying such an amount, the candidate is sure to be on a tight budget. Prep4sureExam provides Microsoft AZ-104 preparation material at very low prices compared to other platforms. We also assure you that the amount will not be wasted and you will not have to pay for the

certification a second time. For added reassurance, we also provide up to 1 year of free updates. Free demo version of the actual product is also available so that you can verify its validity before purchasing.

Microsoft Azure Administrator Sample Questions (Q377-Q382):

NEW QUESTION # 377

Which blade should you instruct the finance department auditors to use?

- A. partner information
- **B. cost analysis**
- C. invoices
- D. External services

Answer: B

Explanation:

Explanation

Cost analysis: Correct Option

In cost analysis blade of Azure, you can see all the detail for custom time span. You can use this to determine expenditure of last few day, weeks, and month. Below options are available in Cost analysis blade for filtering information by time span: last 7 days, last 30 days, and custom date range. Choosing the first option (last 7 days) auditors can view the costs by time span.

Cost analysis shows data for the current month by default. Use the date selector to switch to common date ranges quickly. Examples include the last seven days, the last month, the current year, or a custom date range.

Pay-as-you-go subscriptions also include date ranges based on your billing period, which isn't bound to the calendar month, like the current billing period or last invoice. Use the <PREVIOUS and NEXT> links at the top of the menu to jump to the previous or next period, respectively. For example, <PREVIOUS will switch from the Last 7 days to 8-14 days ago or 15-21 days ago.

Invoice: Incorrect Option

Invoices can only be used for past billing periods not for current billing period, i.e. if your requirement is to know the last week's cost then that also not filled by invoices because Azure generates invoice at the end of the month. Even though Invoices have custom timespan, but when you put in dates for a week, the pane would be empty. Below is from Microsoft document:

Resource Provider: Incorrect Option

When deploying resources, you frequently need to retrieve information about the resource providers and types.

For example, if you want to store keys and secrets, you work with the Microsoft.KeyVault resource provider.

This resource provider offers a resource type called vaults for creating the key vault. This is not useful for reviewing all Azure costs from the past week which is required for audit.

Payment method: Incorrect Option

Payment methods is not useful for reviewing all Azure costs from the past week which is required for audit.

NEW QUESTION # 378

Hotspot Question

You have an Azure subscription that contains the virtual networks shown in the following table.

The subscription contains the private DNS zones shown in the following table.

You add virtual network links to the private DNS zones as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Yes

No registration zone for VNET2.

Box 2: Yes

You can link VNET1 to Zone3.com A private DNS zone can have multiple registration virtual networks. However, every virtual network can only have one registration zone associated with it.

Box 3: No

Auto registration is already enabled on Zone 1. When you add a link from VNET2 to Zone.

NEW QUESTION # 379

You have an Azure App Service web app named appl. You configure autoscaling as shown in following exhibit.

You configure the autoscale rule criteria as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 380

You have an Azure subscription that contains a storage account.

You have an on-premises server named Server1 that runs Window Server 2016. Server1 has 2 TB of data.

You need to transfer the data to the storage account by using the Azure Import/Export service.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

NOTE: More than one order of answer choices is correct. You will receive credit for any of the correct orders you select.

Answer:

Explanation:

1 - Attach an external disk to Server1 and then run waimportexport.exe.

2 - From the Azure portal, create an import job.

3 - Detach the external disks from Server1 and ship the disks to an Azure data center.

4 - From the Azure portal, update the import job.
