Valid NCP-BC Exam Materials, Trusted NCP-BC Exam Resource

If you think that NCP-BC certification exam is easy to crack, you are mistaken. It takes a lot of effort and hard work to get the results. The first step is to download real Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 (NCP-BC) Exam Questions of FreeDumps. These Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 (NCP-BC) exam questions are available in PDF, desktop practice test software, and web-based practice exam.

Nutanix Certified Professional - Business Continuity (NCP-BC) 7.5 Sample Questions (Q76-Q81):

NEW QUESTION # 76

An administrator builds a single recovery plan that includes workloads protected with Asynchronous (async) and Nearsync replication schedules together with workloads protected by Synchronous replication (syncrep) schedules, to keep failover seamless during an outage.

Which statement is true regarding this configuration?

- A. Mixing async and syncrep schedules in one recovery plan is supported.
- B. Mixing schedule types in the recovery plan only affects retention, not recovery success.
- C. Mixing is supported only for test failovers, but not for planned or unplanned failovers.
- **D. Mixing async and nearsync in the same recovery plan is supported.**

Answer: D

NEW QUESTION # 77

An administrator wants to protect the snapshots created on the cluster. Only authorized users should be allowed to modify or delete the snapshots on the cluster.

How can the administrator harden the security of the snapshots?

- A. Configure a backup user with admin privileges.
- B. Configure CVM and AHV hardening.
- **C. Configure Approval policy for snapshots.**
- D. Configure cluster lockdown and use SSH keys.

Answer: C

NEW QUESTION # 78

An administrator needs to provide the QA team with a VM state from four days ago to test an older browser version. However, the current production VM contains new application code and security patches that must not be deleted or overwritten.

Which restore operation should the administrator perform to meet this requirement?

- A. Disk-level Attach from Snapshot
- **B. Self-Service Restore (SSR)**
- C. Out-of-place Restore (Clone)
- D. In-place Restore (Revert)

Answer: B

NEW QUESTION # 79

How does the system behave if the network cannot sustain the data change rate required to maintain a 1-minute RPO between the primary and recovery AZs?

- A. The protected VMs are failed over.
- **B. The system automatically switches to Asynchronous replication mode.**
- C. The VMs continue to be protected in 1-minute RPO, but write I/O is degraded.
- D. All write I/O to the protected VMs is paused.

Answer: B

NEW QUESTION # 80

An administrator plans to migrate guest VMs from a legacy Protection Domain-based DR plan to the Prism Central-based Disaster Recovery solution.

What should be done first before removing the legacy protection domains?
