### CWNP Certified Wireless IoT Solutions Administrator(2025 Edition) Sample Questions (Q17-Q22):

#### NEW QUESTION # 17

Within what development environment is XAML most commonly used?

- A. PHP
- B. R
- C. Python
- D. .NET

#### Answer: D

Explanation:

- \* XAML and .NET: XAML (eXtensible Application Markup Language) is primarily used within the .NET framework for defining user interfaces. Specifically, technologies like:
  - \* WPF (Windows Presentation Foundation): Desktop application UIs
  - \* Xamarin: Mobile app UIs
- \* XAML in Other Frameworks: While some limited adaptation exists, its core use is tightly coupled with .NET technologies.

References:

XAML Overview (Microsoft Docs): Introduces to XAML emphasizing its use in .NET applications.

WPF Documentation: Tutorials and references specifically mentioning XAML's role in Windows desktop development.

#### NEW QUESTION # 18

How does OFDMA differ from OFDM?

- A. Subcarriers of OFDMA can contain data destined for a different receiver
- B. OFDMA allows multiple devices to transmit simultaneously on the same frequency

- C. OFDMA uses multiple radios to achieve higher throughput
- D. OFDMA offers greater range by using multiple channels at once

**Answer: B**

Explanation:

OFDM (Orthogonal Frequency-Division Multiplexing): Divides a channel into multiple subcarriers for data transmission.

OFDMA (Orthogonal Frequency-Division Multiple Access): Extends OFDM by allowing multiple users to share subcarriers simultaneously, improving efficiency and spectral utilization.

**NEW QUESTION # 19**

As an RF signal propagates it becomes weaker at any given measurement point as it gets farther away from the transmitter. What concept is described?

- A. Diffraction
- B. Beamwidth
- **C. Free Space Path Loss**
- D. RF latency

**Answer: C**

Explanation:

\* Free Space Path Loss (FSPL): Describes how a radio signal weakens as it travels through open space, even without obstacles. It's caused by the signal spreading out, resulting in decreased power density at the receiver.

\* Calculation: FSPL depends on distance and frequency.

**NEW QUESTION # 20**

What is an important acceptance agreement to achieve in the final customer meeting for a wireless IoT deployment?

- **A. Stakeholder acceptance**
- B. Power supply provisioning
- C. Support for wearable IoT solutions
- D. Scope definition

**Answer: A**

Explanation:

Successful Deployment Depends on Buy-In: A final customer meeting signifies the handover phase. Achieving stakeholder agreement ensures everyone impacted by the solution has a voice and feels their concerns are addressed.

Sign-Off and Formal Acceptance: Stakeholders often need to formally "sign-off" on a project's completion, indicating satisfaction and readiness for operational use.

**NEW QUESTION # 21**

What is a valid reason to continue using older wireless networking technologies?

- A. The desire to support internal antennas
- B. The desire to use older encryption processes, which are faster regardless of the CPU implemented
- C. The desire for faster communications
- **D. A requirement to support legacy devices**

**Answer: D**

Explanation:

\* Legacy Support: The primary reason to continue using older wireless technologies is the need to connect with devices that don't support newer standards (e.g., old sensors or equipment).

\* Other Reasons (Not as Strong):

\* Cost: Replacing legacy devices can be expensive.

\* Reliability: Some legacy technologies might be well-proven in specific settings.
