NEW QUESTION # 34

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- B. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- C. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.
- **D. Subsequent migration activities follow Bluefield deployment scenario.**

Answer: D

Explanation:

In SAP Ariba deployments, when a full Greenfield baseline has been applied initially—meaning a fresh, full suite setup on the Test site—and the customer deploys a single solution (like Sourcing) to Production first, all subsequent deployments follow a Bluefield scenario. This means that later stages of deployment (e.g., Contracts, Supplier Risk) involve selective migration and incremental configuration changes to Production without rebuilding everything from scratch. Bluefield scenarios specifically accommodate environments where Production may already be live with transactions, requiring careful selective migration to avoid disruption. This contrasts with Brownfield, which typically involves upgrading or reusing existing deployments without full baseline resets. Also, Greenfield deployments do not require all suite components to migrate simultaneously; phased deployments are supported. This approach ensures minimal risk during deployment and provides flexibility to roll out additional modules progressively. Extract summary: SAP Ariba documentation highlights Bluefield for phased, incremental deployments post Greenfield baseline application to accommodate live production environments.
