問題 #44

Section of transfer line in which flow is in a downward direction is called

- A. Riser of FCCU
- **B. Standpipe of FCCU**
- C. None of the above
- D. Transfer line of FCCU

答案：B

問題 #45

The terminology for testing refractory that was sampled during installation in order to confirm that they meet specified physical property standards is called

- A. As - installed testing
- B. Physical property test
- C. None of the above
- D. Both of the above

答案： A

問題 #46

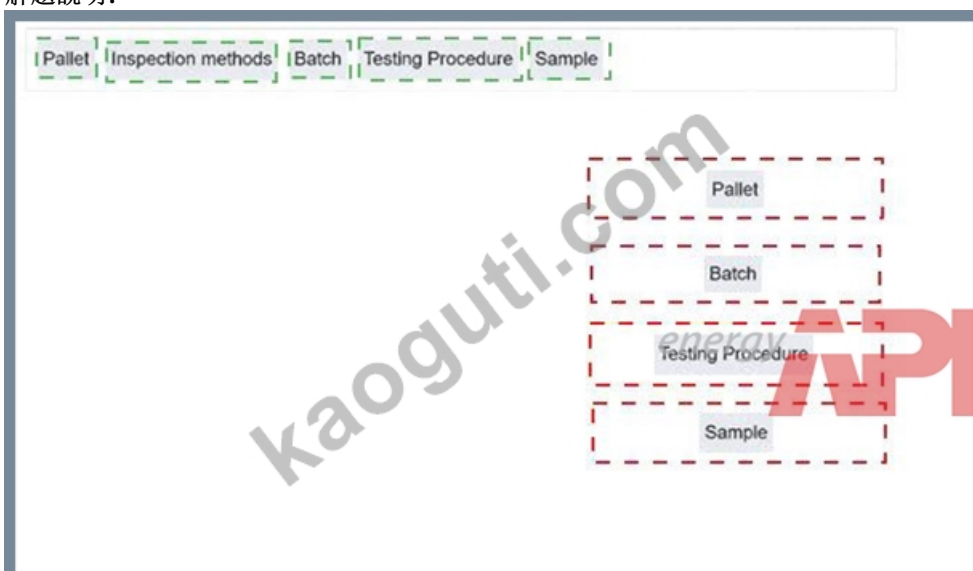

Which factors must be the same when retesting a sample that fails to meet specification?

Pallet Inspection methods Batch Testing Procedure Sample

答案：

解題說明：

Explanation:

Pallet

Batch

Testing Procedure

Sample

When a sample fails to meet the required specifications in accordance with API Std 936, any retesting must maintain strict consistency with the original conditions to ensure validity and comparability of results.

API 936 states:

"If a sample fails to meet any requirement, resampling shall be permitted. However, retesting shall be performed using specimens from the same batch, pallet, and sample as the original test. The same testing procedure must be used."

- API Std 936, Section 6.2.3

Explanation of Matching Terms:

Pallet: To ensure material consistency.

Batch: Revalidates results without introducing variability from a new production lot.

Testing Procedure: Methodology must not change to avoid skewed comparison.

Sample: Must be the original sample to confirm initial findings.

Therefore, all of these factors must remain the same. The only item in your provided list that is not required to match is "Inspection methods" - it is not part of the retesting condition clause.

問題 #47

Which term is used to describe a newly installed monolithic refractory lining that has not been exposed to either a dry-out or initial heating?

- A. Green refractory
- B. Wet refractory
- C. Installed refractory
- D. Castable refractory

答案： A

解題說明：

The API 936 terminology section defines "green refractory" as:

"Green Refractory: A monolithic refractory that has been placed but has not yet been exposed to curing or dryout temperatures."

- API Std 936, Section 3: Definitions

Thus, "green refractory" is the technically correct term for the unheated, freshly installed condition.

問題 #48

What temperature is required to form a permanent bond in phosphate-bonded plastic refractory?

- A. 300°F to 500°F (150°C and 260°C)
- B. 50°F to 100°F (10°C and 38°C)
- C. 100°F to 300°F (38°C and 150°C)
- D. 500°F to 700°F (260°C and 370°C)

答案： D

解題說明：

Phosphate-bonded plastic refractories develop their final bonding during high-temperature exposure. As described in TR 980:

"Phosphate-bonded plastics require temperatures between 500°F and 700°F (260°C and 370°C) to form a permanent ceramic bond."

- API TR 980, Section 5.2.3
