NEW QUESTION # 70
A security team needs to ingest a static file for a specific incident. The log file has not been collected previously and future updates to the file must not be indexed.
Which command would meet these needs?

- A. splunk edit oneshot [opt/ incident/data.* -index incident
- B. splunk edit monitor /opt/incident/data.* -index incident
- C. splunk add one shot / opt/ incident [data .log -index incident
- D. splunk add monitor /opt/incident/data.log -index incident

Answer: C

Explanation:
Explanation
The correct answer is A. splunk add one shot / opt/ incident [data . log -index incident According to the Splunk documentation1, the splunk add one shot command adds a single file or directory to the Splunk index and then stops monitoring it. This is useful for ingesting static files that do not change or update. The command takes the following syntax:
splunk add one shot <file> -index <index_name>
The file parameter specifies the path to the file or directory to be indexed. The index parameter specifies the name of the index where the data will be stored. If the index does not exist, Splunk will create it automatically.
Option B is incorrect because the splunk edit monitor command modifies an existing monitor input, which is used for ingesting files or directories that change or update over time. This command does not create a new monitor input, nor does it stop monitoring after indexing.
Option C is incorrect because the splunk add monitor command creates a new monitor input, which is also used for ingesting files or directories that change or update over time. This command does not stop monitoring after indexing.
Option D is incorrect because the splunk edit oneshot command does not exist. There is no such command in the Splunk CLI.

NEW QUESTION # 71
Where should apps be located on the deployment server that the clients pull from?

- A. $SPLUNK_HCME/etc/master-apps
- B. $SPLUNK_HCME/etc/deployment-apps
- C. $SFLUNK_KOME/etc/apps
- D. $SPLUNK_HCME/etc/sear:ch

Answer: B

Explanation:
After an app is downloaded, it resides under $SPLUNK_HOME/etc/apps on the deployment clients. But it resided in the $SPLUNK_HOME/etc/deployment-apps location in the deployment server.

NEW QUESTION # 72
After automatic load balancing is enabled on a forwarder, the time interval for switching indexers can be updated by using which of the following attributes?

- A. channelTTL
- B. secsInFailureInterval
- C. connectionTimeout
- D. autoLBFrequency

Answer: D

NEW QUESTION # 73
Consider the following stanza in inputs.conf:

What will the value of the source filed be for events generated by this scripts input?

- A. liscer.sh
- B. unknown
- C. /opt/splunk/ecc/apps/search/bin/liscer.sh
- D. liscer

Answer: C

Explanation:
Explanation
