Exam AWS-Solutions-Architect-Professional Pass Guide | Exam AWS-Solutions-Architect-Professional Overviews

Why don't you begin to act? The first step is to pass AWS-Solutions-Architect-Professional exam. Time will wait for no one. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional AWS-Solutions-Architect-Professional Questions torrent provider, we are worth trusting; because we make great efforts, we do better. Here are some reasons to choose us.

Amazon AWS Certified Solutions Architect - Professional Sample Questions (Q302-Q307):

NEW QUESTION # 302

A company plans to move regulated and security-sensitive businesses to AWS. The Security team is developing a framework to validate the adoption of AWS best practice and industry-recognized compliance standards. The AWS Management Console is the preferred method for teams to provision resources.

Which strategies should a Solutions Architect use to meet the business requirements and continuously assess, audit, and monitor the configurations of AWS resources? (Choose two.)

- A. Use the Amazon CloudWatch Events near-real-time capabilities to monitor system events patterns, and trigger AWS Lambda functions to automatically revert non-authorized changes in AWS resources. Also, target Amazon SNS topics to enable notifications and improve the response time of incident responses.
- B. Use Amazon CloudWatch Logs agent to collect all the AWS SDK logs. Search the log data using a pre- defined set of filter patterns that machines mutating API calls. Send notifications using Amazon CloudWatch alarms when unintended changes are performed. Archive log data by using a batch export to Amazon S3 and then Amazon Glacier for a long-term retention and auditability.
- C. Use CloudTrail integration with Amazon SNS to automatically notify unauthorized API activities. Ensure that CloudTrail is enabled in all accounts and available AWS services. Evaluate the usage of Lambda functions to automatically revert non-authorized changes in AWS resources.
- D. Use AWS CloudTrail events to assess management activities of all AWS accounts. Ensure that CloudTrail is enabled in all accounts and available AWS services. Enable trails, encrypt CloudTrail event log files with an AWS KMS key, and monitor recorded activities with CloudWatch Logs.
- E. Use AWS Config rules to periodically audit changes to AWS resources and monitor the compliance of the configuration. Develop AWS Config custom rules using AWS Lambda to establish a test-driven development approach, and further automate the evaluation of configuration changes against the required controls.

Answer: A,D

NEW QUESTION # 303

An IAM user is trying to perform an action on an object belonging to some other root account's bucket. Which of the below mentioned options will AWS S3 not verify?

- A. Permission provided by the bucket owner to the IAM user
- B. Permission provided by the parent of the IAM user on the bucket
- C. The object owner has provided access to the IAM user
- D. Permission provided by the parent of the IAM user

Answer: B

Explanation:

Explanation

If the IAM user is trying to perform some action on the object belonging to another AWS user's bucket, S3 will verify whether the owner of the IAM user has given sufficient permission to him. It also verifies the policy for the bucket as well as the policy defined by the object owner.

NEW QUESTION # 304

A company is collecting a large amount of data from a fleet of IoT devices. Data is stored as Optimized ROW Columnar (ORC) files in the Hadoop Distributed File System (HDFS) on a persistent Amazon EMR cluster. The company's data analytics team queries the data by using SQL in Apache Presto deployed on the same EMR cluster. Queries scan large amounts of data, always run for less 15 minutes, and run only between 5 PM and 10 PM.

The company is concerned about the high cost associated with the current solution. A solution architect must propose the most cost-effective solution that will allow SQL data queries.

Which solution will meet these requirements?

- A. Store data in Amazon S3. Use the AWS Glue Data Catalog and Amazon Athena to query data.
- B. Store data in Amazon Redshift Use Amazon Redshift to query data.
- C. Store data in Amazon S3 Amazon Redshift Spectrum to query data
- D. Store data in EMR File System (EMRFS) Use Presto in Amazon EMR to query data

Answer: B

NEW QUESTION # 305

A company is migrating its marketing website and content management system from an on-premises data center to AWS. The company wants the AWS application to be developed in a VPC with Amazon EC2 instances used for the web servers and an

Amazon RDS instance for the database.

The company has a runbook document that describes the installation process of the on-premises system. The company would like to base the AWS system on the processes referenced in the runbook document. The runbook document describes the installation and configuration of the operating systems, network settings, the website, and content management system software on the servers. After the migration is complete, the company wants to be able to make changes quickly to take advantage of other AWS features. How can the application and environment be deployed and automated in AWS, while allowing for future changes?

- **A. Write an AWS CloudFormation template that creates the VPC, the EC2 instances, and the RDS instance for the application. Include EC2 user data in the AWS CloudFormation template to install and configure the software.**
- B. Write an AWS CloudFormation template that creates the VPC, the EC2 instances, and the RDS instance for the application. Ensure that the rest of the steps in the runbook are updated to reflect any changes that may come from the AWS migration.
- C. Write a Python script that uses the AWS API to create the VPC, the EC2 instances, and the RDS instance for the application. Write shell scripts that implement the rest of the steps in the runbook. Have the Python script copy and run the shell scripts on the newly created instances to complete the installation.
- D. Update the runbook to describe how to create the VPC, the EC2 instances, and the RDS instance for the application by using the AWS Console. Make sure that the rest of the steps in the runbook are updated to reflect any changes that may come from the AWS migration.

Answer: A

NEW QUESTION # 306

A European online newspaper service hosts its public-facing WordPress site in collocated data center in London. The current WordPress infrastructure consists of a load balancer, two web servers, and one MySQL database server. A solutions architect is tasked with designing a solution with the following requirements:

- * Improve the websites performance.
- * Make the web tier scalable and stateless.
- * Improve the database server performance for read-heavy loads.
- * Reduce latency for users across Europe and the US
- * Design the new architecture with a goal of 99.9% availability.

Which solution meets these requirements while optimizing operational efficiency?

- A. Use an Application Load Balancer (ALB) in front of an Auto Scaling group of WordPress Amazon EC2 instances in two AWS Regions and two Availability Zones in each Region. Configure an Amazon ElastiCache cluster in front of a global Amazon Aurora MySQL database. Move the WordPress shared files to Amazon EFS. Configure Amazon CloudFront with the ALB as the origin and select a price class that includes the US and Europe. Configure EFS cross-Region replication.
- B. Use an Application Load Balancer (ALB) in front of an Auto Scaling group of WordPress Amazon EC2 instances in one AWS Region and three Availability Zones. Configure an Amazon DocumentDB table in front of a Multi-AZ Amazon Aurora MySQL DB cluster. Move the WordPress shared files to Amazon EFS. Configure Amazon CloudFront with the ALB as the origin, and a price class that includes all global locations.
- C. Use an Application Load Balancer (ALB) in front of an Auto Scaling group of WordPress Amazon EC2 instances in two AWS Regions and three Availability Zones in each Region. Configure an Amazon ElastiCache cluster in front of a global Amazon Aurora MySQL database. Move the WordPress shared files to Amazon FSx with cross-Region synchronization. Configure Amazon CloudFront with the ALB as the origin and a price class that includes the US and Europe.
- **D. Use an Application Load Balancer (ALB) in front of an Auto Scaling group of WordPress Amazon EC2 instances in one AWS Region and three Availability Zones. Configure an Amazon cluster in front of a Multi-AZ Amazon Aurora MySQL DB cluster. Move the WordPress shared files to Amazon EFS. Configure Amazon CloudFront with the ALB as the origin, and select a price class that includes the US and Europe.**

Answer: D
