Our Analytics-Con-201 study materials provide free trial service for consumers. If you are interested in our Analytics-Con-201

study materials, and you can immediately download and experience our trial question bank for free. Through the trial you will have different learning experience on Analytics-Con-201 exam guide , you will find that what we say is not a lie, and you will immediately fall in love with our products. As a key to the success of your life, the benefits that our Analytics-Con-201 Study Materials can bring you are not measured by money. Analytics-Con-201 test torrent can help you pass the exam in the shortest time.

Salesforce Certified CRM Analytics and Einstein Discovery Consultant Sample Questions (Q27-Q32):

NEW QUESTION # 27

Universal Containers' CRM Analytics team is building a dashboard with two widgets.

1. List widget associated to the query "Type_2" and grouped by the dimension "Type" (multi-selection)
2. Donut chart widget associated to the query "Step_pie_3" and grouped by the dimension "Type" The team wants to use bindings/interactions so any selection in the List widget will filter the Donut chart. The queries use different datasets, and users should be able to choose more than one Type (multi-selection).

What is the right syntax for the binding/interaction?

- A.

```
"filters": [ [ "Type", "{{cell(Step_pie_3.selection, 0, 'Type').asObject()}}" ] ]
```

- B. ☐

```
"filters": [ [ "Type", "{{column(Type_2.selection, ['Type']).asObject()}}" ] ]
```

- C.

Answer: B

Explanation:

For the given requirement where a selection in a list widget needs to filter data displayed on a donut chart, and considering the list allows for multi-selection of the 'Type', the correct binding/interaction would be to use a syntax that captures the multi-select aspect and passes it appropriately. The right syntax, as indicated in Option A, looks like this:

```
"{{column(Type_2.selection, ['Type']).asObject()}}"
```

This syntax ensures:

* Multi-selection: The column() function in combination with .asObject() ensures that multiple selected values from the 'Type_2' query can be passed as an object, which the donut chart can utilize to filter its content.

* Correct Data Type Handling: By using .asObject(), the binding ensures the data passed between widgets maintains the correct structure expected by the CRM Analytics dashboard, thereby ensuring accurate filtering.

NEW QUESTION # 28

Which timeseries statement will fix the query?

- A. q = timeseries q generate 'sum_Sales' as 'Forecasted_Sales' with (length=12,dateCols=('Date_Year', 'Date_Month', 'Y-M'), partition='Region');
- B. q= timeseries q generate 'sum_Sales' as 'Forecasted_Sales' with (dateCols=('Date_Year', 'Date_Quarter', 'Y-Q'), partition='Region', seasonality=4);
- C. q = timeseries q generate 'sum_Sales' as 'Forecasted_Sales' with (dateCols=('Date_Quarter', 'Date_Month', 'Q-M'), partition='Region', ignoreLast=true);

Answer: A

NEW QUESTION # 29

A system administrator at Cloud Kicks creates a joined report to showcase the new business deals closing in the current quarter, which was well received by the business stakeholders. A manager wants to visualize this report on CRM Analytics.

The CRM Analytics consultant determines the report can be trended on CRM Analytics, but it's not working as expected.

What is causing the issue?

- A. The Salesforce report was filtered on quarterly data which meant it did not have enough data to trend on CRM Analytics.
- B. The Analytics Integration user did not have permission to view the report on Salesforce.
- C. Trending dashboards cannot be created from joined reports.

Answer: C

NEW QUESTION # 30

The sole manager of a CRM Analytics app at Cloud Kicks is leaving the company. What should the CRM Analytics consultant do to ensure the app remains accessible?

- A. Deactivate the user and assign an active one to the app's manager role.
- **B. Assign an active user the app's manager role before the previous manager is deactivated.**
- C. Wait for the CRM Analytics app to auto-assign an active user as its manager.

Answer: B

Explanation:

To ensure continuity in managing a CRM Analytics app at Cloud Kicks after the current manager leaves, it is critical to proactively assign a new manager. Here's why this is the best approach:

* Role Transition: Assigning a new manager before the current manager's account is deactivated ensures there is no gap in app management, maintaining access and administrative continuity.

* Avoid Disruption: Waiting for an automatic reassignment (which does not typically occur in CRM Analytics) or post-deactivation reassignment could disrupt the management and operation of the app, potentially leading to access issues or administrative challenges.

* Proactive Management: This approach is in line with best practices for CRM system management, where critical roles and responsibilities are transitioned smoothly to avoid any operational disruptions.

NEW QUESTION # 31

After the initial creation of a model, the first model insight explains 93% of the variation of the outcome variable. This is unusually high. What is the most likely reason for this?

- A. The model contains too many outlier values.
- B. The dataset contains multiple dominant values.
- **C. The outcome variable may be causing data leakage.**

Answer: C

NEW QUESTION # 32

.....

Many people are difficult in getting the Analytics-Con-201 certification successfully. If you also have trouble in passing your exam and getting your certification, we think it is time for you to use our Salesforce Consultant quiz prep. If you choose our study materials and use our products well, we can promise that you can pass the exam and get the Analytics-Con-201 Certification. Then you will find you have so many chances to advance in stages to a great level of social influence and success.
