Dumps 212-82 Torrent - 212-82 Test Review

If you are curious or doubtful about the proficiency of our 212-82 preparation quiz, we can explain the painstakingly word we did behind the light. By abstracting most useful content into the 212-82 exam materials, they have helped former customers gain success easily and smoothly. The most important part is that all contents were being sifted with diligent attention. No errors or mistakes will be found within our 212-82 Study Guide.

ECCouncil Certified Cybersecurity Technician Sample Questions (Q129-Q134):

NEW QUESTION # 129
You are the cybersecurity lead for an International financial institution. Your organization offers online banking services to millions of customers globally, and you have recently migrated your core banking system to a hybrid cloud environment to enhance scalability and cost efficiencies.
One evening, after a routine system patch, there is a surge in server-side request forgery (SSRF) alerts from your web application firewall(WAF). Simultaneously, your intrusion detection system (IDS) flags possible attempts to interact with cloud metadata services from your application layer, which could expose sensitive cloud configuration details and API keys. This Is a clear Indication that attackers might be trying to leverage the SSRF vulnerability to breach your cloud infrastructure. Considering the critical nature of your services and the high stakes involved, how should you proceed to tackle this imminent threat while ensuring minimal disruption to your banking customers?

- A. Isolate the affected cloud servers and redirect traffic to backup servers, ensuring continuous service while initiating a deep-

- B. Notify all banking customers about the potential security incident, urging them to change their passwords and monitor their accounts for any unauthorized activity.
- C. Rollback the recent patch immediately and inform the cloud service provider about potential unauthorized access to gauge the extent of vulnerability and coordinate a joint response.
- D. Engage with a third-party cybersecurity firm specializing in cloud security to conduct an emergency audit, relying on its expertise to identify the root cause and potential breaches.

Answer: A

NEW QUESTION # 130
Brielle. a security professional, was instructed to secure her organization's network from malicious activities.
To achieve this, she started monitoring network activities on a control system that collected event data from various sources. During this process. Brielle observed that a malicious actor had logged in to access a network device connected to the organizational network. Which of the following types of events did Brielle identify in the above scenario?

- A. Warning
- B. Success audit
- C. Failure audit
- D. Error

Answer: B

Explanation:
Success audit is the type of event that Brielle identified in the above scenario. Success audit is a type of event that records successful attempts to access a network device or resource. Success audit can be used to monitor authorized activities on a network, but it can also indicate unauthorized activities by malicious actors who have compromised credentials or bypassed security controls4.
References: Success Audit Event

NEW QUESTION # 131
Steve, a network engineer, was tasked with troubleshooting a network issue that is causing unexpected packet drops. For this purpose, he employed a network troubleshooting utility to capture the ICMP echo request packets sent to the server. He identified that certain packets are dropped at the gateway due to poor network connection.
Identify the network troubleshooting utility employed by Steve in the above scenario.

- A. traceroute
- B. arp
- C. ipconfig
- D. dnsenurn

Answer: A

Explanation:
Traceroute is the network troubleshooting utility employed by Steve in the above scenario.
Traceroute is a utility that traces the route of packets from a source host to a destination host over a network. Traceroute sends ICMP echo request packets with increasing TTL (Time to Live) values and records the ICMP echo reply packets from each intermediate router or gateway along the path. Traceroute can help identify the network hops, latency, and packet loss between the source and destination hosts.Dnsenum is a utility that enumerates DNS information from a domain name or an IP address. Arp is a utility that displays and modifies the ARP (Address Resolution Protocol) cache of a host. Ipconfig is a utility that displays and configures the IP (Internet Protocol) settings of a host.

NEW QUESTION # 132
Perform vulnerability assessment of an Android device located at IP address 172.30.20.110.
Identify the severity score for the device. You can use the OpenVAS vulnerability scanner, available with Parrot Security, with credentials admln/password for this challenge. (Practical Question)

- A. 2.2
- B. 2.8

- C. 2.4
- D. 02.6

Answer: B

NEW QUESTION # 133
Analyze the executable file ShadowByte.exe located in the Downloads folder of the Attacker Machine-I and determine the Linker Info value of the file. (Practical Question)

- A. 6.2
- B. 3.5
- C. 2.25
- D. 04.25

Answer: C

Explanation:
Analyzing the executable file to determine the Linker Info value involves examining the file's properties. The Linker Info is part of the metadata within an executable file, often viewed using tools such as PE Explorer, CFF Explorer, or using command-line tools likedumpbinin Windows orreadelfin Unix-like systems. Here's a step-by-step approach:
* Locate the file: Ensure thatShadowByte.exeis in the Downloads folder.
* Use a tool to inspect the executable:
* PE Explorer/CFF Explorer: Open the file in one of these tools and navigate to the sections that display header information.
* Command-line: Usedumpbin /HEADERS ShadowByte.exeon Windows orreadelf -h ShadowByte.exeon Unix-like systems.
* Identify the Linker Info: Look for the "Linker Version" or similar field in the output.
* Interpret the value: In this case, the correct Linker Info value is2.25.
