

3V0-24.25 Valid Dumps Ebook - 3V0-24.25 Free Braindumps

Answer: A,D,E

NEW QUESTION 28

You are reviewing the Open Resource Requests KPI card in the Fiori app Resource Management for Projects. What are the possible urgency groupings? Note: There are 2 correct Answers to this question.

- A. Very High
- B. Upcoming
- C. Overdue
- D. Critical

Answer: A,C

NEW QUESTION 29

Based on the SAP Activate methodology, which activities must you perform in the Explore phase? Note: There are 2 correct Answers to this question.

- A. Use the Quality system to demonstrate SAP Best Practices processes
- B. Configure the organizational structure and chart of accounts in the system
- C. Conduct the Fit-to-Standard workshops to enable customers and identify gaps
- D. Use the Starter system to demonstrate SAP Best Practices processes

Answer: C,D

NEW QUESTION 30

Which activities can you execute in the Maintain Business Roles SAP Fiori app? Note: There are 2 correct Answers to this question.

- A. Maintain catalog roles
- B. Assign authorization profiles to a business role
- C. Maintain restrictions
- D. Assign business catalogs to a business role

Answer: B,D

In addition to the free download of sample questions, we are also confident that candidates who use 3V0-24.25 test guide will pass the exam at one go. Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service prep torrent is revised and updated according to the latest changes in the syllabus and the latest developments in theory and practice. Regardless of your weak foundation or rich experience, 3V0-24.25 exam torrent can bring you unexpected results. In the past, our passing rate has remained at 99%-100%. This is the most important reason why most candidates choose 3V0-24.25 Test Guide. Failure to pass the exam will result in a full refund. But as long as you want to continue to take the Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service exam, we will not stop helping you until you win and pass the certification.

VMware 3V0-24.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • IT Architectures, Technologies, Standards: This section covers the differentiation between VMs and containers, helping determine the appropriate compute model. It also includes understanding Kubernetes architecture, networking, storage, service mesh, Helm, and reference architectures for VKS deployments.

Topic 2	<ul style="list-style-type: none"> • Install, Configure, Administrate the VMware Solution: Includes creating and managing Supervisor clusters, namespaces, zones, workloads, and add-on services. Also covers provisioning, scaling, updating VKS clusters, autoscalers, storage strategies, workload deployments, backup • restore, and editing YAML configurations.
Topic 3	<ul style="list-style-type: none"> • Plan and Design the VMware Solution: Covers evaluating the impact of load balancer sizing, namespace network options, and vSphere namespace architecture. It includes planning processes for enabling Supervisor clusters and implementing service mesh.
Topic 4	<ul style="list-style-type: none"> • VMware Products and Solutions: Focuses on configuring vSphere Supervisor capabilities, networking, storage, identity, and access for Kubernetes clusters. It also covers managing Kubernetes releases, CNIs, NSX networking objects, TLS certificates, and securing VKS clusters.
Topic 5	<ul style="list-style-type: none"> • Troubleshoot and optimize the VMware Solution: Focuses on diagnosing and resolving provisioning, connectivity, namespace, VM class, storage, networking, container, registry, and CA errors. It also includes recovering failed upgrades and optimizing cluster performance using monitoring and scaling tools.

High Pass-Rate 3V0-24.25 Valid Dumps Ebook & Accurate 3V0-24.25 Free Braindumps: Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service

Have you been many years at your position but haven't got a promotion? Or are you a new comer in your company and eager to make yourself outstanding? Our 3V0-24.25 exam materials can help you. With our 3V0-24.25 exam questions, you can study the most latest and specialized knowledge to deal with the problems in you daily job as well as get the desired 3V0-24.25 Certification. You can lead a totally different and more successfully life latter on.

VMware Advanced VMware Cloud Foundation 9.0 vSphere Kubernetes Service Sample Questions (Q32-Q37):

NEW QUESTION # 32

A Cloud Administrator is optimizing the Supervisor configuration. They initially deployed the Supervisor with the NSX Advanced Load Balancer (Avi). However, users are reporting certificate warning errors when accessing the Supervisor Control Plane API endpoint.

Review the current status:

Status: Running

Config Status: Certificate Untrusted

[Certificate Details]

Subject: CN=192.168.10.50

Issuer: CN=192.168.10.50

Type: Self-signed

To resolve this and ensure compliance, the administrator needs to replace the machine SSL certificate.

Which specific actions are part of the correct procedure to replace the Supervisor certificate? (Choose 2.)

- A. Generate a new CSR (Certificate Signing Request) from the vSphere Client under "Workload Management" > "Supervisor" > "Configure" > "Certificates".
- B. Replace the certificate directly inside the Supervisor Control Plane VM using SSH and openssl commands.
- C. Upload the signed certificate chain and private key to the Supervisor configuration in the vSphere Client.
- D. Re-run the "Enable Workload Management" wizard to inject the new certificate.
- E. Replace the machine SSL certificate on the vCenter Server system; the Supervisor inherits this trust automatically.

Answer: A,C

NEW QUESTION # 33

A Security Operations Analyst is enforcing a policy that all container images used in TKG clusters must be pulled from an authenticated private registry (reg.secure.com). Anonymous pulls are blocked.

A developer's deployment is failing with ImagePullBackOff. The events show 401 Unauthorized.

Which steps must be taken to enable the TKG cluster to authenticate to the private registry? (Select all that apply.)

- A. The registry must be changed to allow anonymous access for the TKG nodes IP range.
- **B. Create a Kubernetes Secret of type docker-registry (or kubernetes.io/dockerconfigjson) in the developer's namespace, containing the valid username and password/token for reg.secure.com**
- C. Configure the Supervisor's "Image Registry" service with the credentials; the TKG cluster will inherit them automatically for all namespaces.
- D. Add the username and password to the TanzuKubernetesCluster spec under settings.network.registryAuth.
- **E. Reference the created Secret in the imagePullSecrets section of the Pod or Deployment YAML (or patch the default ServiceAccount to include it).**

Answer: B,E

NEW QUESTION # 34

An administrator enabled cluster scaling by running kubectl edit deployment and updating the number of replicas from 5 to 10. When the cluster was redeployed with the number of replicas set to 5, what was the result?

- A. The autoscaling YAML file was not updated.
- **B. The cluster YAML file was not updated to reflect the requested number of pods.**
- C. The Supervisor YAML file was not updated to enable autoscaling.
- D. The cluster did not have sufficient resources to deploy the requested number of pods.

Answer: B

Explanation:

In a vSphere Kubernetes Service (VKS) environment, resource management follows a Declarative Model.

When an administrator uses kubectl edit deployment to manually scale a running workload from 5 to 10 replicas, they are modifying the live state of the deployment. However, the source of truth for a Tanzu Kubernetes cluster in VCF 9.0 is the Cluster YAML specification maintained by the Cluster API (CAPI) provider within the Supervisor.

If the administrator redeploys the cluster or if the Supervisor's controller performs a reconciliation loop, it refers back to the original configuration file. If that cluster YAML file still defines the replica count as 5, the Supervisor will terminate the 5 "extra" pods to match the desired state defined in the configuration. This is a common administrative pitfall; for changes to be persistent across redeployments or updates in VCF 9.0, the underlying manifest (the "Desired State") must be updated. Manually editing the live object only provides a temporary change that will be overwritten during the next synchronization or lifecycle event because the cluster YAML file was not updated to reflect the requested increase.

NEW QUESTION # 35

A Platform Engineer is designing a Supervisor architecture for a critical production environment that requires resilience against the failure of an entire Availability Zone (AZ). The environment consists of three vSphere Zones: Zone-1, Zone-2, and Zone-3.

Review the following proposed configuration for the Supervisor deployment:

Proposed Supervisor Config

Name: Prod-Supervisor

Zones:

- Zone-1

- Zone-2

Control Plane Size: Medium

Network: vDS with NSX Advanced Load Balancer

Storage: vSAN Stretched Cluster

Why will this configuration fail to meet the requirement of tolerating a full zone failure while maintaining full control plane functionality? (Select all that apply.)

- A. The "Medium" Control Plane size does not support multi-zone availability; "Large" is required.
- B. The Supervisor must be deployed in a single zone and rely on vSphere HA to restart VMs in the other zones.
- **C. The vSAN Stretched Cluster provides storage resilience, but the Supervisor Control Plane VMs must be anti-affined across three distinct fault domains to ensure one remains available and quorum is held.**

- D. vDS networking does not support multi-zone Supervisor deployments; NSX-T Data Center is a strict requirement for Zonal Supervisors.
- E. A Supervisor deployed across only two zones (Zone-1 and Zone-2) cannot maintain a quorum (etcd) if one of those zones fails; a minimum of three zones is required for a Zonal Supervisor to survive a zone failure.

Answer: C,E

NEW QUESTION # 36

Which characteristic distinguishes a vSphere Pod from a standard virtual machine in a vSphere with Tanzu environment?

- A. A vSphere Pod runs directly on the ESXi host using a lightweight generic kernel (CRX) optimized for containers.
- B. A vSphere Pod requires a pre-existing Tanzu Kubernetes Grid cluster to be deployed.
- C. A vSphere Pod runs a full heavy-weight guest operating system (Linux/Windows) managed by the tenant.
- D. A vSphere Pod cannot be managed via the vSphere Client and is only visible via kubectl.

Answer: A

NEW QUESTION # 37

.....

Life is beset with all different obstacles that are not easily overcome. For instance, 3V0-24.25 exams may be insurmountable barriers for the majority of population. However, with the help of our exam test, exams are no longer problems for you. The reason why our 3V0-24.25 training materials outweigh other study prep can be attributed to three aspects, namely free renewal in one year, immediate download after payment and simulation for the software version. Now that using our 3V0-24.25 practice materials have become an irresistible trend, why don't you accept 3V0-24.25 learning guide with pleasure?
