New SAP-C02 Test Discount Voucher Pass Certify | Reliable Reliable SAP-C02 Test Forum: AWS Certified Solutions Architect - Professional (SAP-C02)

BONUS!!! Download part of Prep4pass SAP-C02 dumps for free: https://drive.google.com/open?id=1TgUaYbk6jcBS66os0vxeBIXR7uNuFb28

The data for our SAP-C02 practice materials that come up with our customers who have bought our SAP-C02 actual exam and

provided their scores show that our high pass rate is 98% to 100%. This is hard to find and compare with in the market. And numerous enthusiastic feedbacks from our worthy clients give high praises not only on our SAP-C02 Study Guide, but also on our sincere and helpful 24 hours customer services online. You will feel grateful to choose our SAP-C02 learning quiz!

The web-based practice test is similar to the desktop-based software, with all the same elements of the desktop practice exam. The mock exam can be accessed from any browser and does not require installation. The SAP-C02 questions in the mock test are the same as those in the real exam. Candidates can take the web-based AWS Certified Solutions Architect - Professional (SAP-C02) (SAP-C02) practice test immediately, regardless of the operating system and browser they are using.

Updated SAP-C02 Test Discount Voucher - Perfect SAP-C02 Exam Tool Guarantee Purchasing Safety

SAP-C02 practice software creates an atmosphere just like a real Amazon exam thus developing your confidence and leaving no space for any surprises that make you anxious on the day of the exam. Moreover, the software is developed by Prep4pass in a way that is simple to use and helps you perform better at the AWS Certified Solutions Architect - Professional (SAP-C02) exam. But in case you face any problem in accessing the Amazon SAP-C02 exam questions while preparing for the AWS Certified Solutions Architect - Professional (SAP-C02) exam, there is a product support team at Prep4pass to help you with it. You get guaranteed money back – if despite proper preparation using the Amazon SAP-C02 by Prep4pass you are unable to pass the exam. Grab the opportunity to learn, pass the AWS Certified Solutions Architect - Professional (SAP-C02) exam, and grow your career. By taking Amazon certification you can even improve your potential earning power and build a better professional network.

Amazon AWS Certified Solutions Architect - Professional (SAP-C02) Sample Questions (Q485-Q490):

NEW QUESTION # 485
A company has an organization in AWS Organizations. The organization consists of a large number of AWS accounts that belong to separate business units. The company requires all Amazon EC2 instances to be provisioned with custom, hardened AMIs. The company wants a solution that provides each AWS account access to the AMIs
Which solution will meet these requirements with the MOST operational efficiency?

- A. Create the AMIs with EC2 Image Builder Create an AWS Lambda function to share the AMIs across all AWS accounts.
- B. Create and share the AMIs with EC2 Image Builder Use AWS Service Catalog to configure a product that provides access to the AMIs across all AWS accounts.
- C. Create the AMIs with EC2 Image Builder Create an AWS CodePipeline pipeline to share the AMIs across all AWS accounts.
- D. Deploy Jenkins on an EC2 instance Create jobs to create and share the AMIs across all AWS accounts.

Answer: B

NEW QUESTION # 486
A company uses an on-premises data analytics platform. The system is highly available in a fully redundant configuration across 12 servers in the company's data center.
The system runs scheduled jobs, both hourly and daily, in addition to one-time requests from users. Scheduled jobs can take between 20 minutes and 2 hours to finish running and have tight SLAs. The scheduled jobs account for 65% of the system usage. User jobs typically finish running in less than 5 minutes and have no SLA.
The user jobs account for 35% of system usage. During system failures, scheduled jobs must continue to meet SLAs. However, user jobs can be delayed.
A solutions architect needs to move the system to Amazon EC2 instances and adopt a consumption-based model to reduce costs with no long-term commitments. The solution must maintain high availability and must not affect the SLAs.
Which solution will meet these requirements MOST cost-effectively?

- A. Split the 12 instances across three Availability Zones in the chosen AWS Region. Run two instances in each Availability Zone as On-Demand Instances with a Savings Plan. Run two instances in each Availability Zone as Spot Instances.
- B. Split the 12 instances across three Availability Zones in the chosen AWS Region. Run three instances in each Availability Zone as On-Demand Instances with Capacity Reservations. Run one instance in each Availability Zone as a Spot Instance.
- C. Split the 12 instances across two Availability Zones in the chosen AWS Region. Run two instances in each Availability

Zone as On-Demand Instances with Capacity Reservations. Run four instances in each Availability Zone as Spot Instances.
- D. Split the 12 instances across three Availability Zones in the chosen AWS Region. In one of the Availability Zones, run all four instances as On-Demand Instances with Capacity Reservations. Run the remaining instances as Spot Instances.

Answer: A

Explanation:
Reference:
AWS Savings Plans documentation: https://aws.amazon.com/savingsplans/
AWS Spot Instances documentation: https://aws.amazon.com/ec2/spot/
AWS High Availability documentation: https://aws.amazon.com/architecture/high-availability/ By splitting the 12 instances across three Availability Zones, the company can ensure that the system is highly available and can handle system failures without affecting SLAs for scheduled jobs.
On-Demand instances with a Savings Plan provide a more cost-effective option for running critical scheduled jobs that have tight SLAs. Savings Plan gives you the flexibility to save money by committing to a consistent amount of usage for a one or three-year term. This will allow the company to take advantage of discounted prices for a committed amount of usage, regardless of the instance family, size, AZ, or region.
Spot instances can be used to handle non-critical user jobs that have no SLA, as they offer spare compute capacity at a significant discount compared to On-Demand prices.
Using a combination of Savings Plan and Spot instances allows the company to take advantage of the low cost of Spot instances while providing a more cost-effective and reliable option for running critical scheduled jobs, thus meeting the requirements of maintaining high availability, meeting SLAs for scheduled jobs, and reducing costs with no long-term commitments.

NEW QUESTION # 487
A company is running a compute workload by using Amazon EC2 Spot Instances that are in an Auto Scaling group. The launch template uses two placement groups and a single instance type.
Recently, a monitoring system reported Auto Scaling instance launch failures that correlated with longer wait times for system users. The company needs to improve the overall reliability of the workload.
Which solution will meet this requirement?

- A. Update the launch template Auto Scaling group to increase the number of placement groups.
- B. Create a new launch template version that uses attribute-based instance type selection. Configure the Auto Scaling group to use the new launch template version.
- C. Update the launch template to use a larger instance type.
- D. Replace the launch template with a launch configuration to use an Auto Scaling group that uses attribute-based instance type selection.

Answer: A

Explanation:
https://docs.aws.amazon.com/autoscaling/ec2/userguide/create-asg-instance-type-requirements.html#use-attribute-based-instance-type-selection-prerequisites

NEW QUESTION # 488
A company has an application that uses an on-premises Oracle database. The company is migrating the database to the AWS Cloud. The database contains customer data and stored procedures.
The company needs to migrate the database as quickly as possible with minimum downtime. The solution on AWS must provide high availability and must use managed services for the database.
Which solution will meet these requirements?

- A. Use AWS DMS to replicate data from the on-premises Oracle database to a new Amazon Aurora PostgreSQL database. Use AWS SCT to convert the schema and stored procedures. Redirect the application to the Aurora DB cluster.
- B. Use AWS DMS to replicate data from the on-premises Oracle database to a new Amazon RDS for Oracle database. Transfer the database files to an Amazon S3 bucket. Configure the RDS database to use the S3 bucket as database storage. Set up S3 replication for high availability. Redirect the application to the RDS DB instance.
- C. Use AWS DMS to replicate data from the on-premises Oracle database to a new Amazon DynamoDB table. Use DynamoDB Accelerator (DAX) and implement global tables for high availability. Rewrite the stored procedures in AWS Lambda. Run the stored procedures in DAX. After replication, redirect the application to the DAX cluster endpoint.
- D. Create a database backup of the on-premises Oracle database. Upload the backup to an Amazon S3 bucket. Shut down

the on-premises Oracle database to avoid any new transactions. Restore the backup to a new Oracle cluster that consists of Amazon EC2 instances across two Availability Zones. Redirect the application to the EC2 instances.

Answer: A

Explanation:
Using AWS Database Migration Service (DMS) with an Amazon Aurora PostgreSQL target and the AWS Schema Conversion Tool (SCT) ensures a rapid migration with minimal downtime.
DMS continuously replicates data, supporting near-zero downtime migration while keeping the source and target in sync.
SCT automatically converts the Oracle schema and stored procedures to PostgreSQL-compatible format, minimizing manual effort.
Aurora provides a managed, highly available database that scales across multiple AZs, ensuring high availability for the migrated workload.
This method leverages AWS-managed services for database and migration, ensuring a secure, reliable, and low-overhead transition to the cloud.

NEW QUESTION # 489
A company uses multiple AWS accounts in a single AWS Region A solutions architect is designing a solution to consolidate logs generated by Elastic Load Balancers (ELBs) in the AppDev, AppTest and AppProd accounts. The logs should be stored in an existing Amazon S3 bucket named s3-eib-logs in the central AWS account. The central account is used for log consolidation only and does not have ELBs deployed ELB logs must be encrypted at rest Which combination of steps should the solutions architect take to build the solution" (Select TWO)

- A. Enable access logging for the ELBs. Set the S3 location to the s3-elb-logs bucket
- B. Update the S3 bucket policy for the s3-elb-logs bucket to allow the s3 PutObject action for the AppDev AppTest and AppProd account IDs
- C. Enable Amazon S3 default encryption using server-side encryption with S3 managed encryption keys (SSE-S3) for the s3-elb-logs S3 bucket
- D. Update the S3 bucket policy for the s3-eib-logs bucket to allow the s3 PutObject and s3 DeleteObject actions for the AppDev AppTest and AppProd account IDs
- E. Update the S3 bucket policy for the s3-elb-logs bucket to allow the s3 PutBucketLogging action for the central AWS account ID

Answer: C,E

NEW QUESTION # 490
......

Far more effective than online courses free or other available exam materials from the other websites, our SAP-C02 exam questions are the best choice for your time and money. As the content of our SAP-C02 study materials has been prepared by the most professional and specilized experts. I can say that no one can know the SAP-C02 learning quiz better than them and they can teach you how to deal with all of the exam questions and answers skillfully.

Reliable SAP-C02 Test Forum: https://www.prep4pass.com/SAP-C02_exam-braindumps.html

Amazon SAP-C02 Test Discount Voucher Proven Results: Industry's highest 99.6% First Time Pass Rate, Search for some extra ordinary SAP-C02 preparation material, Prep4pass offer Amazon SAP-C02 the latest dumps in three formats, To other workers who want to keep up with the time and being competent in today's world, you are also looking for some effective SAP-C02 exam prep as well, Amazon SAP-C02 Test Discount Voucher 100% money back guarantee - if you fail your exam, we will give you full refund.
