[2026] Updated CompTIA PK0-005 Dumps - Tips For Better Preparation

However, you should keep in mind that to get success in the CompTIA Project+ Certification Exam (PK0-005) exam is not an easy task. It is a challenging exam and not a traditional exam. But complete CompTIA PK0-005 exam preparation can enable you to crack the CompTIA PK0-005 exam easily. For the quick and complete CompTIA Project+ Certification Exam (PK0-005) exam preparation you can trust PK0-005 exam practice test questions. The CompTIA PK0-005 exam practice test questions have already helped many CompTIA PK0-005 exam candidates in their preparation and success and you can also trust "Prep4sures" exam questions and start preparing today.

CompTIA PK0-005 Certification Exam is an excellent way to validate your project management skills and knowledge and advance your career in the field. With its broad coverage of project management topics and globally recognized certification, it is an ideal choice for anyone interested in project management.

CompTIA Project+ Certification Exam Sample Questions (Q405-Q410):

NEW QUESTION # 405

A project team is reviewing the project plan and related documents and identifies tasks that could be spread into smaller deliverables. Which of the following documents should the team edit first?

- A. Preliminary scope statement
- **B. Work breakdown structure**
- C. Risk assessment
- D. Milestone chart

Answer: B

Explanation:

The Work Breakdown Structure (WBS) is a hierarchical decomposition of the total scope of work to accomplish project objectives. If tasks can be broken into smaller deliverables, the WBS should be updated first to reflect these changes.

According to the CompTIA Project+ PK0-005 exam objectives, under Domain 2.2: Given a scenario, determine the appropriate scope management activities, maintaining an accurate WBS is crucial for effective scope management.

NEW QUESTION # 406

After a product is released for production, a tester performs a test to ensure its basic functionality is working as expected. Which of the following is the tester performing?

- A. Stress test
- B. Penetration test
- C. Regression test
- **D. Smoke test**

Answer: D

NEW QUESTION # 407

During the project execution phase, Ann, a project manager, received an email from the project sponsor asking for an additional work package to be added to the project scope due to new legislation.

INSTRUCTIONS

Review the email with the latest updates sent by the project sponsor and respond in the following order:

1. Select the best tool for tracking the server migration progress.
2. Select the new critical path.
3. Select the correct number of engineers required for the server migration phase.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Select the Appropriate Tool:

Select the new critical path.

Option A

Option B

Option C

Answer:

Explanation:

See the solution below in explanation.

NEW QUESTION # 408

A project team evaluates the potential risks to a project that uses legacy applications. Which of the following should be the main concern of the project team?

- A. Company reorganization
- B. Infrastructure end of life
- C. Digital transformation
- **D. Major cybersecurity event**

Answer: D

Explanation:

When a project relies on legacy applications, a primary and often heightened risk is a major cybersecurity event. Legacy systems frequently have older architectures, limited vendor support, weaker security controls, outdated dependencies, and delayed patching capabilities—factors that increase vulnerability exposure. From a Project+ perspective, risk management requires identifying threats with the highest potential impact; a cybersecurity incident can create severe consequences across confidentiality, integrity, and availability, leading to service outages, regulatory exposure (especially if PII is involved), reputational damage, and unplanned cost/schedule impacts.

"Infrastructure end of life" (A) is also a legitimate legacy-related risk, but it is typically a more predictable lifecycle risk that can be planned around (replacement schedules, support contracts). A "company reorganization" (B) is a general organizational risk not specific to legacy applications. "Digital transformation" (C) is more of a strategic initiative context than a discrete risk event.

Because the question asks for the main concern when using legacy apps, the most critical, high-impact threat that legacy systems exacerbate is a major cybersecurity event—the kind of risk that can derail timelines and budgets and force emergency scope changes and remediation work.

NEW QUESTION # 409

Following the approval of a change by the CCB, which of the following should a project manager consider next when deploying a new networking device into an existing production environment?

- A. Operational security
- **B. Maintenance window**
- C. Risk assessment
- D. Validation check

Answer: B

Explanation:

A maintenance window is a predefined period of time during which planned changes or updates can be performed on a system or network with minimal impact on the users or business operations¹. A project manager should consider the maintenance window next when deploying a new networking device into an existing production environment, as it will help to reduce the risk of downtime, disruption, or errors. A maintenance window should be scheduled in advance, communicated to the stakeholders, and aligned with the change management plan².

NEW QUESTION # 410

.....

As we all know, the preparation process for an exam is very laborious and time-consuming. We had to spare time to do other things to prepare for PK0-005 exam, which delayed a lot of important things. If you happen to be facing this problem, you should choose our PK0-005 Study Materials. With our study materials, only should you take about 20 - 30 hours to preparation can you attend the exam. The rest of the time you can do anything you want to do to, which can fully reduce your review pressure.
