Our evaluation system for CPC-CDE-RECERT test material is smart and very powerful. First of all, our researchers have made great efforts to ensure that the data scoring system of our CPC-CDE-RECERT test questions can stand the test of practicality. Once you have completed your study tasks and submitted your training results, the evaluation system will begin to quickly and accurately perform statistical assessments of your marks on the CPC-CDE-RECERT Exam Torrent. You only need to spend 20 to 30 hours on practicing and consolidating of our CPC-CDE-RECERT learning material, you will have a good result. After years of development practice, our CPC-CDE-RECERT test torrent is absolutely the best. You will embrace a better future if you choose our CPC-CDE-RECERT exam materials.

The smartest way of getting high passing score in CPC-CDE-RECERT valid test is choosing latest and accurate certification learning materials. The up-to-date CPC-CDE-RECERT exam answers will save you from wasting much time and energy in the exam preparation. The content of our CPC-CDE-RECERT Dumps Torrent covers the key points of exam, which will improve your ability to solve the difficulties of CPC-CDE-RECERT real questions. Just add our exam dumps to your cart to get certification.

CPC-CDE-RECERT Free Practice Exams, CPC-CDE-RECERT Demo Test

Once you decide to pass the CyberArk CDE-CPC Recertification exam and get the certification, you may encounter many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the exam and get the certification. In order to help you solve these problem and help you pass the exam easy, we compiled such a CPC-CDE-RECERT exam torrent. We can promise that you will have no regret buying our CyberArk CDE-CPC Recertification exam dumps. If you are hesitating to buy our CPC-CDE-RECERT Test Quiz, if you are anxious about whether our product is suitable for you or not, we think you can download the trail version. We believe our CyberArk CDE-CPC Recertification exam dumps will help you make progress and improve yourself.

CyberArk CDE-CPC Recertification Sample Questions (Q50-Q55):

NEW QUESTION # 50

How should you configure PSM for SSH to support load balancing?

- A. by editing sshd.config on the all the PSM for SSH servers

- B. in PVWA > Options > PSM for SSH Proxy > Servers > VIP
- C. by using a network load balancer
- D. in PVWA > Options > PSM for SSH Proxy > Servers

Answer: B

NEW QUESTION # 51

What is a supported certificate format for retrieving the LDAPS certificate when not using the Cyberark provided LDAPS certificate tool?

- A. .der
- B. p12
- C. p7c
- D. .p7b

Answer: A

Explanation:

For retrieving the LDAPS certificate when not using the CyberArk provided LDAPS certificate tool, the supported certificate format is .der. The DER (Distinguished Encoding Rules) format is a binary form of a certificate rather than the ASCII PEM format. This format is widely supported across various systems for securing LDAP connections by providing a mechanism for LDAP servers to authenticate themselves to users.

This information can be verified by checking LDAP configuration guides and CyberArk's secure implementation documentation which outline supported certificate formats for LDAP integrations.

NEW QUESTION # 52

Which browser is supported for PSM Web Connectors developed using the CyberArk Plugin Generator Utility (PGU)?

- A. Firefox
- B. Internet Explorer
- C. Google Chrome
- D. Opera

Answer: C

Explanation:

For PSM Web Connectors developed using the CyberArk Plugin Generator Utility (PGU), the supported browser is Google Chrome. This is because the PGU is designed to create plugins that are most compatible with Chrome's web technologies and security frameworks. Chrome is generally recommended by CyberArk for its up-to-date security features and extensive support for web applications. This is further supported by the CyberArk documentation on the Plugin Generator Utility, which specifies browser compatibility and the optimal environment for deploying web connectors.

NEW QUESTION # 53

You plan to install the Privilege Cloud Connector on Windows Server 2019 and must leverage your existing RDS Per-user licenses for PSM connections. What must you do?

- A. Install the RDS License Server Service on Windows 2016.
- B. Migrate the local PSMConnect users to Domain users.
- C. Modify the UseRDSPerUser parameter to Yes on every Windows-related platform.
- D. Add the UseRDSPerUser=Yes line to the basic_psm.ini parameters file.

Answer: B

Explanation:

CyberArk documents that due to RDS licensing enforcement in Windows 2019/2022, Per-user licensing is not supported for local users, and (when Per-user CALs are required) you should move the built-in PSM application users (PSMConnect / PSMAdminConnect) from local to domain users.

Therefore, to leverage existing Per-user RDS licensing on Windows 2019 PSM servers, you must migrate the local PSM users to

domain users # C.

NEW QUESTION # 54

Refer to the exhibit.

You set up your LDAP Directory in CyberArk Identity, but encountered an error during the connection test.

Which scenarios could represent a valid misconfiguration? (Choose 2.)

□

- A. TCP Port 636 could be blocked by a network firewall, preventing communication between the CyberArk Identity Connector and the LDAP Server.
- B. TCP Port 636 could be blocked by a network firewall, preventing communication between the Secure Tunnel and the LDAP Server.
- C. All required CA Certificates have been installed on the CyberArk Identity Connector but the LDAP Bind credentials provided are incorrect.
- D. 'Verify Server Certificate' is activated but the provided hostname is not listed as a Subject Alternative Name (SAN) in the LDAP server's certificate.

Answer: A,D

Explanation:

From the error message provided, two likely scenarios could represent valid misconfigurations:

* TCP Port 636 could be blocked by a network firewall, preventing communication between the CyberArk Identity Connector and the LDAP Server (A). This is a common issue where firewall settings prevent the secure communication port (typically 636 for LDAPS) from transmitting data between the server and the connector, thus blocking the connection attempt.

* 'Verify Server Certificate' is activated but the provided hostname is not listed as a Subject Alternative Name (SAN) in the LDAP server's certificate (C). This scenario occurs when SSL/TLS security measures are stringent, requiring that the hostname used to connect to the LDAP server must match one listed in the server's SSL certificate. If the hostname does not match, the connection will fail due to SSL certificate validation errors.

NEW QUESTION # 55

.....

We want to finish long term objectives through customer satisfaction and we have achieved it already by our excellent CPC-CDE-RECERT exam questions. In this era of cut throat competition, we are successful than other competitors. What is more, we offer customer services 24/7. Even if you fail the exams, the customer will be reimbursed for any loss or damage after buying our CPC-CDE-RECERT Guide dump. One decision will automatically lead to another decision, we believe our CPC-CDE-RECERT guide dump will make you fall in love with our products and become regular buyers.
