PCCP Exam Questions - Palo Alto Networks Certified Cybersecurity Practitioner Study Question & PCCP Test Guide

In every area, timing counts importantly. With the advantage of high efficiency, our PCCP practice materials help you avoid wasting time on selecting the important and precise content from the broad information. In such a way, you can confirm that you get the convenience and fast. By studying with our PCCP Real Exam for 20 to 30 hours, we can claim that you can get ready to attend the PCCPexam.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q187-Q192):

NEW QUESTION # 187

Which two statements are true about servers in a demilitarized zone (DMZ)? (Choose two.)

- A. They can be accessed by traffic from the internet.
- B. They can expose servers in the internal network to attacks.
- C. They are isolated from the internal network.
- D. They are located in the internal network.

Answer: A,C

Explanation:

A demilitarized zone (DMZ) is a portion of an enterprise network that sits behind a firewall but outside of or segmented from the internal network¹. The DMZ typically hosts public services, such as web, mail, and domain servers, that can be accessed by traffic from the internet¹. However, the DMZ is isolated from the internal network by another firewall or security gateway, which prevents unauthorized access to the private network². Therefore, statements A and D are true about servers in a DMZ, while statements B and C are false. References:

NEW QUESTION # 188

In which two cloud computing service models are the vendors responsible for vulnerability and patch management of the underlying operating system? (Choose two.)

- A. SaaS
- B. IaaS
- C. PaaS
- D. On-premises

Answer: A,C

Explanation:

In cloud computing, there are three main service models: Software as a Service (SaaS), Platform as a Service (PaaS), and Infrastructure as a Service (IaaS). Each model defines the level of responsibility and control that the cloud provider and the cloud customer have over the cloud resources and services. The cloud provider is responsible for vulnerability and patch management of the underlying operating system in SaaS and PaaS models, while the cloud customer is responsible for it in IaaS model. In SaaS, the cloud provider delivers software applications over the internet and manages all aspects of the cloud infrastructure, platform, and application. The cloud customer only needs to access the software through a web browser or an API. In PaaS, the cloud provider offers a platform for developing, testing, and deploying applications and manages the cloud infrastructure and operating system. The cloud customer can use the platform tools and services to create and run their own applications. In IaaS, the cloud provider supplies the basic cloud infrastructure, such as servers, storage, and networking, and the cloud customer can provision and configure their own operating system, middleware, and applications. NEW QUESTION # 189

Organizations that transmit, process, or store payment-card information must comply with what standard?

- A. GDPR
- B. CISA
- C. PCI DSS
- D. HIPAA

Answer: C

Explanation:

PCI DSS stands for Payment Card Industry Data Security Standard, which is a set of requirements intended to ensure that all companies that process, store, or transmit credit card information maintain a secure environment¹. The standard is administered by the Payment Card Industry Security Standards Council, and its use is mandated by the major card brands². PCI DSS covers 12 requirements for compliance, organized into six control objectives, such as building and maintaining a secure network and systems, protecting cardholder data, and implementing strong access control measures³. NEW QUESTION # 190

Which component of cloud security is used to identify misconfigurations during the development process?

- A. Code security
- B. Network security

- C. Container security
- D. SaaS security

Answer: A

Explanation:

Code security focuses on identifying vulnerabilities and misconfigurations early in the development process.

It uses tools like static code analysis and infrastructure-as-code (IaC) scanning to ensure secure coding and configuration before deployment.

NEW QUESTION # 191

In addition to integrating the network and endpoint components, what other component does Cortex integrate to speed up IoC investigations?

- A. Infrastructure
- B. Switch
- C. Computer
- **D. Cloud**

Answer: D

Explanation:

Cortex XDR breaks the silos of traditional detection and response by natively integrating network, endpoint, and cloud data to stop sophisticated attacks

NEW QUESTION # 192

.....

Our professions endeavor to provide you with the newest information with dedication on a daily basis to ensure that you can catch up with the slight changes of the PCCP test. Therefore, our customers are able to enjoy the high-productive and high-efficient users' experience. In this circumstance, as long as your propose and demand are rational, we have the duty to guarantee that you can enjoy the one-year updating system for free. After purchasing our PCCP Test Prep, you have the right to enjoy the free updates for one year long after you buy our PCCP exam questions.
