## Operations-Management試験の準備方法 | 実用的なOperations-Management日本語版トレーリング試験 | 最新のWGU Operations Management (C215, VDC2)合格記

現在の市場では、Operations-Management最新の質問のようなOperations-Management試験の準備に使用される有効なOperations-Management学習教材を購入するのは困難です。国内および国際市場での人気と品質自体の両方で、他の種類の教材はOperations-Managementテストガイドと比較できず、はるかに劣っています。Operations-Management認定ツールには、国内市場に独自の固定クライアントベースがあり、国際市場で重要なシェアを持ち、ますます多くの外国クライアントを引き付けています。

## WGU Operations Management (C215, VDC2) 認定 Operations-Management 試験問題 (Q43-Q48):

### 質問 #43

Which statement is true about capacity requirements planning (CRP)?

- A. Production capacity is created for future production items.
- B. Each product item is individually addressed regardless of relevant holistic processes.
- C. Available capacity is compared to calculated workloads of relevant items.
- D. Human capital adequacy is analyzed for given work centers and production items.

正解： C

解説：

The correct statement about Capacity Requirements Planning (CRP) is that available capacity is compared to calculated workloads of

relevant items.

CRP is a planning technique used after material requirements planning (MRP). While MRP determines what and when materials are needed, CRP verifies whether the organization has sufficient capacity in terms of machines, labor, and work centers to execute the planned production schedule.

CRP works by:

- \* Translating planned orders into workload requirements
- \* Assigning those workloads to specific work centers
- \* Comparing required capacity with available capacity
- \* Identifying overloads or underutilization

The incorrect options misrepresent CRP:

- \* CRP does not create capacity; it evaluates feasibility
- \* Human capital adequacy is part of workforce planning, not CRP's primary role
- \* CRP evaluates workloads in relation to the whole system, not isolated items. Operations Management emphasizes CRP as a feasibility check, ensuring that production plans are realistic and executable before release to the shop floor.

#### 質問 #44

A company suddenly finds demand has increased to 140% of its previous capacity. It has been able to hire only a fraction of the employees previously laid off, and a warehouse fire destroyed 80% of its inventory.

Which two options does the company have to rapidly meet the new demand?

Choose 2 answers

- A. Subcontract a portion of production capacity
- B. Hire and train new full-time employees
- C. Build new production facilities
- D. Hire temporary workers

正解: A、D

解説:

When demand rises suddenly to 140% of existing capacity, the firm must rely on short-term, flexible capacity options to respond quickly.

The two appropriate options are:

- \* Hiring temporary workers
- \* Subcontracting a portion of production capacity

Temporary workers can be deployed rapidly with minimal onboarding time, allowing the firm to increase output without long-term labor commitments. This option is especially effective when the demand surge may be temporary or uncertain.

Subcontracting provides immediate access to external capacity without requiring capital investment. It allows the firm to meet demand while avoiding the risks associated with permanent expansion.

The other options are not viable in the short term:

- \* Building new facilities is capital-intensive and slow
- \* Hiring and training full-time employees requires time and long-term commitment. Operations Management distinguishes capacity-based options into short-term (temporary labor, overtime, subcontracting) and long-term (facilities, permanent workforce). In crisis situations, speed and flexibility dominate decision-making.

#### 質問 #45

What is a major factor in the decision to locate a business near its primary market territory?

- A. Proximity to labor
- B. Proximity to parks
- C. Proximity to customers
- D. Proximity to a community center

正解: C

解説:

Comprehensive and Detailed Explanation (#250 words):

The dominant factor in locating a business near its primary market territory is proximity to customers.

From an Operations Management perspective, closeness to customers:

- \* Reduces transportation and delivery time

- \* Improves service responsiveness
- \* Enhances customer satisfaction
- \* Supports demand growth

This is especially critical for service organizations and distribution-intensive businesses, where customer access and speed are competitive advantages.

While proximity to labor is important, it does not define market territory. Community centers and parks are not operational drivers. Locating near customers aligns capacity with demand, minimizes logistics complexity, and strengthens market presence.

#### 質問 #46

Which design work system minimizes repetitiveness in tasks by assigning employees the role of planning and scheduling?

- A. Job entitlement
- B. Job rotation
- C. Job rating
- D. Job enrichment

正解: D

解説:

Job enrichment minimizes task repetitiveness by expanding employee responsibilities to include planning, scheduling, decision-making, and problem-solving.

In Operations Management, job enrichment increases the depth of a job, not just the variety of tasks.

Employees gain greater autonomy and control over their work, reducing monotony and increasing motivation.

Key characteristics of job enrichment include:

- \* Vertical job loading
- \* Increased responsibility
- \* Feedback on performance
- \* Greater task significance

The other options differ:

- \* Job rotation increases task variety but does not add responsibility
- \* Job entitlement and job rating are not work design systems

Job enrichment is especially valuable in repetitive environments such as assembly lines, where adding planning and quality responsibilities improves both morale and performance.

#### 質問 #47

Which tier-level supplier directly supplies materials or services to a processing and packaging plant?

- A. Tier five suppliers
- B. Tier two suppliers
- C. Tier three suppliers
- D. Tier four suppliers
- E. Tier one suppliers

正解: E

解説:

Comprehensive and Detailed Explanation (#250 words):

Tier one suppliers directly supply materials or services to a processing and packaging plant.

In supply chain hierarchy:

- \* Tier one suppliers deliver components, raw materials, or services directly to the manufacturer
- \* Tier two suppliers supply tier one
- \* Tier three and beyond supply upstream tiers

JIT systems rely heavily on tier one suppliers because:

- \* Delivery frequency is high
- \* Quality must be consistent
- \* Lead times must be short
- \* Coordination must be tight

Operations Management stresses the importance of strong partnerships with tier one suppliers to ensure uninterrupted flow and minimal inventory.

## 質問 #48

Operations-Management WGU Operations Management (C215, VDC2)は、技術的な精度の最高水準を高め、認定された主題と専門家のみを使用します。最新の正確なOperations-Management試験トレントをクライアントに提供し、提供する質問と回答は実際の試験に基づいています。合格率が高く、約98%-100%であることをお約束します。また、Operations-Managementテストプレインダンプは高いヒット率を高め、試験を刺激してOperations-Management試験の準備を整えることができます。あなたの成功は、Operations-Management試験問題に縛られています。
