The PDF file of ACD201 real exam questions is easy to use on laptops, tablets, and smartphones. We have added all the Appian ACD201 questions, which have a chance to appear in the Appian ACD201 real test. Our Appian Senior Developer (ACD201) dumps PDF exam questions are beneficial to prepare for the test in less time.

Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.
Topic 2	<ul style="list-style-type: none"> • Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.
Topic 3	<ul style="list-style-type: none"> • Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.
Topic 4	<ul style="list-style-type: none"> • Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.

Appian Senior Developer Sample Questions (Q54-Q59):

NEW QUESTION # 54

A seamless user experience (UX) is important for an application so that a user does not feel like they are moving through different applications. Often when many developers are working on the same project all together, this can be a concern.

How should you ensure that a seamless UX is maintained throughout the app?

- A. Create reusable expression rules to ensure that the same rules are being used throughout.
- B. Allow each developer to copy client provided mock-ups individually.
- C. Create and add reusable interface components to the Design Library so that developers can quickly and easily use reusable interfaces.

Answer: C

Explanation:

Creating and adding reusable interface components to the Design Library ensures consistency in look and feel across the application, allowing all developers to easily implement a seamless user experience.

NEW QUESTION # 55

Your development team has selected Jenkins as a Continuous Integration (CI) system to integrate testing of Appian into your overall testing strategy.

What should you do to set up automated testing of expression rules using Jenkins?

Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct order.

□

Answer:

Explanation:

□

NEW QUESTION # 56

In reviewing the process model metrics of your application, you notice a process model with a completion rate of only 10%.

What are two possible reasons for this low completion rate? (Choose two.)

- A. There are a significant number of instances that are experiencing process errors, which are not being handled by the production support team.
- B. The process contains at least one User Input Task with no exceptions or escalations, and users do not complete the task.
- C. There are a high number of smart service nodes configured in the process model.

- D. The days configured for archival or deletion is significantly higher than the other process models in your application.

Answer: A,B

Explanation:

Process errors that remain unhandled will stall instances; those instances never reach an end event, driving the completion rate down. User-input tasks without deadlines, exceptions, or escalations can sit indefinitely when users do not act, leaving instances in an active state and lowering the overall completion percentage.

NEW QUESTION # 57

Your client reported that a form in the application is very slow to load.

You investigate and find a query entity which is not performing well.

Which action should you perform to improve query performance for the query entity?

- A. Apply indices on all the fields referred in the query.
- **B. Apply the appropriate filters and indices in both Appian and the database.**
- C. Change the data source of the query entity to a view with a WHERE clause.

Answer: B

Explanation:

Applying appropriate filters and indices in both Appian and the database ensures that only relevant data is retrieved and the database query runs efficiently, improving overall query performance.

NEW QUESTION # 58

You're developing a case management application. Currently, users can view a list of all cases designed using a `forEach()` loop from a record query. Users can navigate to the case summary page which shows the case details in a two (2) column layout. Users are also able to update the case details.

During the last round of UAT testing, users reported that the tool was not intuitive to use.

Match each feedback comment to the suggested UI/UX improvements.

Note: Each UI/UX improvement will be used once, or not at all. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

Answer:

Explanation:

NEW QUESTION # 59
