

Latest 220-1101 Study Notes & 220-1101 Latest Study Questions

CompTIA A+ 220-1101 Core 1 Study Guide

Local Area Network (LAN) - A network that covers a relatively small area such as a building or group of buildings (1.1 & 2.7)

Personal Area Network (PAN) -- Provides communication for devices owned by a single user that work over a short distance
- Bluetooth, IR, NFC, etc.
(1.1 & 2.7)

LCD (Liquid Crystal Display) - Lightweight & Inexpensive - Poor black levels due to Separate Backlight
(1.2)

TN (twisted nematic) - Fast response Times - Low cost - Low Power Use - Limited Viewing Angles
(1.2)

IPS (In Plane Switching) - Better Colors - Better Viewing Angles - More Expensive
(1.2)

OLED (organic light-emitting diode) - Thinner & Brighter - No Need for Backlight
(1.2)

MDM (mobile device management) - - Manage company & user devices
- Centralized management system
- Ensures device security
(1.4)

MAM (mobile application management) - - Set policies & restrictions on apps
- Control Company software (Update, Remove, Etc.)
(1.4)

PRL (Preferred Roaming List) - - Allows phone to connect to the right tower
(1.4)

Port 20/21 - FTP (File Transfer Protocol)
- 20[TCP] for Data Transfers
- 21[TCP] to Control Data Transfers
(2.1)

Port 22 - SSH (Secure Shell) - TCP
- Encrypted Communication
- Looks/Acts the same as Telnet

Free PDF CompTIA - High Pass-Rate 220-1101 - Latest CompTIA A+ Certification Exam: Core 1 Study Notes

Never say you can not do it. This is my advice to everyone. Even if you think that you can not pass the demanding CompTIA 220-1101 exam. You can find a quick and convenient training tool to help you. VCEEngine's CompTIA 220-1101 exam training materials is a very good training materials. It can help you to pass the exam successfully. And its price is very reasonable, you will benefit from it. So do not say you can't. If you do not give up, the next second is hope. Quickly grab your hope, it is in the

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q624-Q629):

NEW QUESTION # 624

Which of the following best describes metered utilization for cloud computing?

- A. Cloud resources are shared with other companies conducting similar business.
- B. Cloud resources are located in the on-site data center.
- **C. Cloud resources are billed to clients based on usage.**
- D. Cloud resources are available at a fixed amount for a fixed price.

Answer: C

Explanation:

Metered utilization for cloud computing is a pricing model where cloud service providers charge clients based on the amount of resources they consume, such as network bandwidth, storage space, CPU cycles, or memory. This allows clients to pay only for what they use, rather than a fixed amount or a subscription fee. Metered utilization can also enable clients to scale their cloud resources up or down according to their needs and demand.

Reference:

[Understanding Metered Billing For Cloud Infrastructure - Togai](#): This article explains the concept of metered billing, its advantages, and how it works for cloud infrastructure services.

[Usage Metering and Throttling in Cloud Computing](#): This article discusses the importance of metering and throttling in cloud computing, and how they are implemented in WSO2 Stratos, a cloud platform as a service (PaaS) solution.

[Cloud Volumes Service Metered Billing: Control Your Cloud ... - NetApp](#): This article describes how NetApp's Cloud Volumes Service offers metered billing for cloud storage, and how it can help clients reduce their cloud costs and optimize their performance.

NEW QUESTION # 625

A large office is eliminating all personal printers for VIP staff members and replacing these devices with one enterprise MFR. Human resources staff members are concerned about printing confidential documents on the new device. Which of the following best addresses this concern?

- A. Audit logs
- B. Wi-Fi direct printing
- C. Central printer server
- **D. Secure print**

Answer: D

NEW QUESTION # 626

A user reports a monitor, keyboard, mouse, and headset are no longer functioning. The user has restarted the laptop and tested an alternative headset and monitor, but the issue persists. The technician notices the user has a printer, USB-C hub, and AC adapter plugged into the laptop. Which of the following should the technician do to MOST likely resolve the issue?

- A. Verify the AC adaptor voltage.
- B. Reinstall the drivers for affected devices.
- C. Make sure the printer is not drawing too much power.
- D. Repair the operating system.
- **E. Replace the user's USB-C hub.**

Answer: E

Explanation:

The most likely cause of the issue is that the user's USB-C hub is faulty or incompatible with the laptop. The USB-C hub is a device that allows the user to connect multiple peripherals to the laptop using a single USB-C port. If the hub is not working properly, it may prevent the monitor, keyboard, mouse, and headset from functioning. The technician should replace the user's USB-C hub with a new one that is compatible with the laptop and test the peripherals again. Verifying the AC adapter voltage will not help with the issue, as the AC adapter is used to power the laptop, not the peripherals. Repairing the operating system will not help either, as the issue is not related to software. Reinstalling the drivers for affected devices may not help, as the issue may be caused by the hub, not

the devices. Making sure the printer is not drawing too much power is irrelevant, as the printer is not connected to the hub or affecting the other peripherals. References:

NEW QUESTION # 627

Which of the following concepts would be used by an online retailer to quickly add more web servers during peak sales times?

- A. Community cloud
- B. High availability
- C. Metered service
- D. **Rapid elasticity**

Answer: D

Explanation:

Rapid elasticity would be used by an online retailer to quickly add more web servers during peak sales times.

NEW QUESTION # 628

A user routinely connects and disconnects multiple devices from a laptop. Which of the following options should a technician recommend to facilitate ease of user mobility?

- A. Serial interfaces
- B. **Docking station**
- C. Network switch
- D. USB hub

Answer: B

Explanation:

* Reasoning: A docking station is designed to provide a central connection point for multiple peripherals, such as monitors, keyboards, mice, and network cables. It allows users to quickly connect or disconnect all devices by simply docking or undocking their laptop, improving mobility and reducing wear and tear on individual ports.

Why the Other Options Are Incorrect:

* A. Serial interfaces:

* Serial interfaces are outdated and rarely used in modern laptops or peripherals. They are not practical for facilitating the connection of multiple devices.

* C. Network switch:

* A network switch is used to connect multiple devices to a network, but it does not simplify the connection of peripherals to a laptop.

* D. USB hub:

* A USB hub can extend the number of available USB ports but lacks the full functionality of a docking station, such as video output or Ethernet connectivity.

Practical Example:

A user with a laptop, external monitors, keyboard, and mouse can use a docking station to connect all devices with a single action, instead of plugging in each device manually.

CompTIA A+ Exam Objective Alignment:

* Objective 5.2: Explain device interfaces, connection types, and usage of docking stations.

NEW QUESTION # 629

.....

All consumers who are interested in 220-1101 guide materials can download our free trial database at any time by visiting our platform. During the trial process, you can learn about the three modes of 220-1101 study quiz and whether the presentation and explanation of the topic in 220-1101 Preparation questions is consistent with what you want. If you are interested in our products, I believe that after your trial, you will certainly not hesitate to buy it.
