CIPS Managing Ethical Procurement and Supply (L5M5) Sample Questions (Q14-Q19):

NEW QUESTION # 14

The main aim of the ILO is to promote rights at work and improve social protection. Is this TRUE?

- A. No - the purpose of the ILO is to increase international trade
- B. Yes - the ILO sets trade rules between nations
- **C. Yes - the ILO is an agency of the UN which deals with labour problems**
- D. No - the ILO was formed in 1975 to encourage globalisation

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Documents:

The International Labour Organisation (ILO) is a specialised UN agency founded in 1919 to promote labour rights and improve social protection. The L5M5 study guide (p.87) confirms that the ILO's mission includes eliminating child labour, eradicating forced labour, and promoting fair wages and safe workplaces. It does not set trade rules (that is the WTO), nor was it created to drive globalisation. For procurement professionals, understanding the ILO is critical when assessing supplier practices against international labour standards, especially in global supply chains.

NEW QUESTION # 15

The Rampal Power Station, a 1320 MW coal-fired power plant, has recently faced accusations of poor health and safety standards in the workplace. Workers have reported being forced to work without safety masks, exposing them to air pollution. If Rampal Power Station fails to improve its health and safety standards, which of the following is the most likely primary consequence?

- A. Destruction of the environment
- B. Acquisition of poor quality materials from suppliers
- **C. Loss of reputation**
- D. Complexity in calculating insurance coverage

Answer: C

Explanation:

Choice B - Loss of reputation and damage to brand is a primary consequence of poor safety standards in the workplace for the

power plant.

Incorrect answer:

Choice A - This option suggests that poor health and safety standards might lead to a decrease in the quality of materials sourced. While safety issues can affect worker performance and productivity, they do not directly relate to the quality of materials acquired from suppliers. Poor health and safety standards are more likely to impact employee morale and retention rather than the procurement process.

Choice C - Environmental effect is an indirect consequence for Rampal power plant but more so to the locals living there and natural habitat. If health and safety standards are not improved, it could lead to environmental issues, but this would be a broader consequence rather than a primary one related to workplace conditions.

Choice D - Although in cases of workers injury or death, calculating insurance would be complex, as not all injury and health related costs are covered by insurance, like sick pay, lost time, fines etc. But this is more of a secondary internal challenge and not a primary consequence of the power plant.

NEW QUESTION # 16

A point in a supply chain where problems may arise and affect business costs is referred to as what?

- A. Cost point
- B. Liability point
- C. Price point
- **D. Touch point**

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Documents:

A touch point is defined in the L5M5 study guide (old p.85, new p.112) as a stage in the supply chain where risks or problems may occur, impacting costs or performance. Examples include transport (risk of damage or loss) and quality control (risk of defective goods). Identifying touch points enables procurement professionals to implement risk mitigation strategies, such as insurance, supplier audits, or contingency planning, thereby strengthening supply chain resilience.

NEW QUESTION # 17

One criticism of the UN Global Compact is that some organisations join without making real ethical improvements, using it for legitimacy instead. What is this known as?

- A. Bribery
- **B. Blue washing**
- C. Corruption
- D. Greenwashing

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Documents:

The L5M5 study guide (p.258) explains that blue washing refers to organisations associating with the UN Global Compact to appear legitimate while failing to implement its principles. The term comes from the blue colour of the UN flag. In contrast, greenwashing (A) is when companies exaggerate their environmental credentials. Blue washing is a reputational risk because it undermines genuine CSR initiatives and public trust. Procurement professionals must ensure that CSR commitments are backed by verifiable actions rather than symbolic gestures.
