Salesforce Mule-Dev-202 Exam | Mule-Dev-202 Latest Test Discount - Easy to Pass Mule-Dev-202: Salesforce Certified MuleSoft Hyperautomation Developer Exam

Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) PDF dumps are the third and most convenient format of the Salesforce Mule-Dev-202 PDF questions prep material. This format is perfect for busy test takers who prefer to study for the Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) exam on the go. Questions bank in the ExamTorrent Salesforce Mule-Dev-202 Pdf Dumps is accessible via all smart devices. We also update Salesforce Certified MuleSoft Hyperautomation Developer (Mule-Dev-202) PDF questions regularly to ensure they match with the new content of the Mule-Dev-202 exam.

Using a smartphone, you may go through the Salesforce Mule-Dev-202 dumps questions whenever and wherever you desire. The Mule-Dev-202 PDF dumps file is also printable for making handy notes. ExamTorrent has developed the online Salesforce Mule-Dev-202 practice test to help the candidates get exposure to the actual exam environment. By practicing with web-based Salesforce Mule-Dev-202 Practice Test questions you can get rid of exam nervousness. You can easily track your performance while preparing for the Salesforce Certified MuleSoft Hyperautomation Developer exam with the help of a self-assessment report shown at the end of Salesforce Mule-Dev-202 practice test.

Answers Mule-Dev-202 Real Questions - Mule-Dev-202 Valid Study Notes

Dear every IT candidate, please pay attention to Salesforce Mule-Dev-202 exam training torrent which can guarantee you 100% pass. We know that time and energy is very precious. So the high efficiency of the Mule-Dev-202 preparation is very important for the IT candidates. If you choose Mule-Dev-202 Online Test, you just need to take 20-30 hours to review the questions and answers, then you can attend your Mule-Dev-202 actual test with confidence.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q32-Q37):

NEW QUESTION # 32

A Salesforce administrator asks for advice on how to build their Salesforce flow. They need to complete several DML actions as part of their Salesforce flow and are running into DML governor limits during testing.
Which two pieces of advice should be given to the Salesforce administrator to improve their flow? (Choose two.)

- A. Use DML statements at the end of the flow wherever possible.
- B. Loopthrough a collection variableto save more records with a single DML statement.
- C. Use the upsert action to reduce the amount of DML statements required duringthe flow runtime.
- D. Avoid puttingDML statements inside of For Loop occurrences.

Answer: B,D

Explanation:
Avoid DML in For Loops:Placing DML (Data Manipulation Language) operations inside a loop can quickly exceed Salesforce governor limits, as each iteration performs a separate DML operation. It's best to collect records in a list and perform DML operations outside the loop.
Reference:Salesforce Governor Limits
Use Collection Variables:By looping through a collection variable and adding records to it, you can perform bulk DML operations, which are more efficient and less likely to hit governor limits.
Reference:Apex Collections and Bulk Processing
Use Upsert Action:Using the upsert action can reduce the number of DML statements by combining insert and update operations. However, this strategy depends on the specific flow requirements and data structure.
Reference:Salesforce Upsert Operation
DML Statements at the End:Consolidating DML operations to the end of the flow is advisable, but care should be taken to handle errors and exceptions appropriately.
Reference:Error Handling in Flows

NEW QUESTION # 33
Northern Trail Outfitters publishes REST APIs to Anypoint Exchange. They write the REST APIs using RAML and share these APIs with internal and external users.
In which language or languages can a user download these APIs?

- A. RAML and Apiary only
- B. RAML only
- C. RAML and OAS only
- D. RAML, OAS, and Apiary

Answer: C

Explanation:
Users can download REST APIs published to Anypoint Exchange in the following languages:
RAML (RESTful API Modeling Language):
RAML is a modeling language for defining APIs, used by MuleSoft for creating REST APIs.
OAS (OpenAPI Specification):
OAS, also known as Swagger, is another widely-used standard for defining APIs.
MuleSoft supports both RAML and OAS formats, allowing users to choose between these two standards when downloading API definitions.

Anypoint Exchange API Documentation
MuleSoft RAML and OAS Documentation

NEW QUESTION # 34
AnyAirlines implements a credit card program that requires customer applications to go through a review process before approval. They want to develop a series of hyperautomation solutions that will integrate to process the applications and enter the customer's information into a legacy system once approved.
They want to complete the following components:
An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object A Salesforce flow that marks the credit card application as approved in Salesforce An RPA process that interacts with multiple applications and websites A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process
Which component will likely require the most effort to complete?

- A. An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object
- B. An RPA process that interacts with multiple applications and websites
- C. A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process
- D. A Salesforce flow that marks the credit card application as approved in Salesforce

Answer: B

Explanation:
Developing an RPA process that interacts with multiple applications and websites typically requires the most effort due to several factors:
Complexity of Interaction:
RPA processes involve simulating human actions to interact with different user interfaces. This includes navigating web pages, filling out forms, and clicking buttons, which can be complex and time-consuming to script and test.
Integration Challenges:
The RPA process must handle different applications and websites, each with unique behaviors and potential for errors. Ensuring reliable and consistent interaction across these systems requires thorough testing and potentially custom handling for each system.
Maintenance and Updates:
RPA processes need to be maintained and updated as the applications or websites they interact with change.
This ongoing effort can be significant compared to other components.
References:
MuleSoft RPA Documentation

NEW QUESTION # 35
An RPA developer is building the implementation of an RPA process based on the BPMN created by a colleague. In the BPMN, they see the symbol below:

What does the symbol represent?

- A. A cleanup activity that is performed at the end of the process to ensure all running applications are closed
- B. One possible endpoint for the process
- C. An activity that is performed if an error occurs during processing
- D. A point in the process where different activities are performed under different circumstances

Answer: D

Explanation:
Symbol Meaning:The symbol shown is a diamond with an "X" inside, which represents an exclusive gateway in BPMN (Business Process Model and Notation). This gateway is used to control the flow of the process based on certain conditions or circumstances.
Reference:BPMN Gateway Types
Exclusive Gateway:An exclusive gateway routes the process flow into one of several paths based on conditions defined within the process model. Only one path is taken out of the gateway.
Reference:Exclusive Gateway Explanation
Usage in Process:When an exclusive gateway is encountered, the process evaluates the conditions on each outgoing sequence flow and chooses the path that meets the conditions. This ensures different activities are performed based on different circumstances.
Reference:BPMN Exclusive Gateway

NEW QUESTION # 36
Northern Trail Outfitters has deployed a MuleSoft RPA process to automate the extraction of sales data from CSV files. To integrate this RPA process with Sales Cloud, an action step is created that calls this RPA process in a MuleSoft Composer flow. Which next step must be added to the flow to make use of the RPA process results?

- A. If/Else block
- B. Create or Update Record action in Sales Cloud
- C. For Each loop
- D. Create Record action in Sales Cloud

Answer: B

Explanation:
To integrate an RPA process that extracts sales data from CSV files with Sales Cloud using MuleSoft Composer, you need to take the following steps:
Invoke RPA Process:
Create an action step in the MuleSoft Composer flow that calls the RPA process to extract the sales data from the CSV files.
Next Step - Create or Update Record:
After the RPA process completes and returns the extracted data, the next step in the flow should be to update Sales Cloud with the new information.
Use theCreate or Update Recordaction to insert the new sales data into Sales Cloud. This action ensures that existing records are updated if they already exist, or new records are created if they don't.
This approach ensures that the results from the RPA process are correctly reflected in Sales Cloud.
