

220-1202 Valid Exam Prep, 220-1202 Dump Torrent

2026 Latest Dumps4PDF 220-1202 PDF Dumps and 220-1202 Exam Engine Free Share: https://drive.google.com/open?id=1ZZaMzW1tkP_CUJxkIP180-cMMYaY3h1D

The best way for candidates to know our CompTIA 220-1202 training dumps is downloading our free demo. We provide free PDF demo for each exam. This free demo is a small part of the official complete CompTIA A+ Certification Exam: Core 2 220-1202 training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing.

Are you preparing for the CompTIA certification recently? Maybe the training material at your hands is wearisome and dull for you to study. Here Dumps4PDF will give you a very intelligence and interactive 220-1202 study test engine. 220-1202 test engine can simulate the examination on the spot. As some statistics revealed, the bad result not only due to the poor preparation, but also the anxious mood. Now, our 220-1202 Simulated Test engine can make you feel the actual test environment in advance. Besides, the high quality 220-1202 valid exam dumps will help you prepare well. You can must success in the 220-1202 real test.

220-1202 Dump Torrent | Valid 220-1202 Test Questions

The meaning of qualifying examinations is, in some ways, to prove the candidate's ability to obtain 220-1202 qualifications that show your ability in various fields of expertise. If you choose our 220-1202 learning guide materials, you can create more unlimited value in the limited study time, learn more knowledge, and take the exam that you can take. Through qualifying 220-1202 examinations, this is our 220-1202 real questions and the common goal of every user, we are trustworthy helpers, so please don't miss such a good opportunity.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q118-Q123):

NEW QUESTION # 118

A technician verifies that a malware incident occurred on some computers in a small office. Which of the following should the technician do next?

- A. Quarantine the infected systems
- B. Update the anti-malware and scan the computers
- C. Disable System Restore
- D. Educate the end users

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Once a malware incident has been confirmed, the immediate next step is to contain the threat. Quarantining infected systems

prevents the malware from spreading to other devices and isolates the malicious code for further analysis or remediation.

B: Educating end users is important but occurs later in the incident response process.

C: Disabling System Restore is part of cleanup, not containment.

D: Updating and scanning should occur after the system is quarantined to prevent further infection or spread.

Reference:

CompTIA A+ 220-1102 Objective 2.5: Given a scenario, detect, remove, and prevent malware using appropriate tools and methods.

Study Guide Section: Malware removal best practices - Step 2: Quarantine the infected system

NEW QUESTION # 119

Each time a user tries to go to the selected web search provider, a different website opens.

Which of the following should the technician check first?

- A. Windows updates
- **B. DNS servers**
- C. IP address
- D. System time

Answer: B

Explanation:

If a user is redirected to an unexpected website, the DNS servers should be checked first to ensure they have not been changed or compromised.

NEW QUESTION # 120

A government client asks a technician to expunge several drives that contain confidential information. The technician must follow regulatory compliance. Which of the following is the best option?

- A. In-house disk incineration
- **B. Certified third-party destruction**
- C. Low-level formatting
- D. Targeted file deletion

Answer: B

Explanation:

Because this is a government client with confidential data and a strict requirement to follow regulatory compliance, the best practice is to use a certified third-party destruction service that can provide documented proof of destruction. The All-in-One guide explicitly notes that "professional hard drive disposal services are third-party vendors" that guarantee drives are thoroughly destroyed by issuing a certificate of destruction

/recycling, which provides assurance that data will not fall into the wrong hands. Mike Meyers' Lab Manual repeats the same exam point: third-party vendors "will guarantee they have truly, thoroughly destroyed drives by issuing a certificate of destruction/recycling." Low-level formatting (often used to mean overwrite/zero-fill) can sanitize drives, but it may not satisfy the requirement for provable compliance and chain-of-custody documentation, especially for regulated environments. Targeted deletion is ineffective because deleted data can remain recoverable. In-house incineration is extreme and may be restricted, unsafe, or noncompliant without proper facilities and documentation. Therefore, Certified third-party destruction (B) is the best option.

NEW QUESTION # 121

A technician is working on a complex, large-scale software deployment. In which of the following places would the technician most likely reference deployment instructions?

- A. User's desktop
- B. File server
- C. Email
- **D. Internal wiki**

Answer: D

Explanation:

An internal wiki is the most likely place to store deployment instructions because it provides centralized, documented, and easily accessible technical procedures for large-scale or complex tasks.

NEW QUESTION # 122

An end user is unable to access the intranet. A technician needs to confirm whether the Windows web server is online and functioning. Which of the following default remote access technologies would the technician most likely use to remotely connect to the server?

- A. RDP
- B. SPICE
- C. SSH
- D. VNC

Answer: A

Explanation:

The correct answer is C. RDP (Remote Desktop Protocol), because RDP is the default remote access technology for Windows servers. It allows technicians to remotely connect to the graphical desktop environment of a Windows server to verify services, logs, and system status.

According to the Quentin Docter - CompTIA A+ Complete Study Guide, RDP is built into Windows operating systems and is commonly used by administrators to manage Windows servers and workstations. It provides full access to the desktop, making it ideal for checking whether services such as IIS (Internet Information Services) are running properly.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide explains that while SSH is commonly used for Linux and network devices, Windows servers typically rely on RDP for administrative access. VNC is a third-party remote desktop solution and is not enabled by default on Windows systems.

The Mike Meyers / Mark Soper Lab Manual reinforces that SPICE is primarily used in virtualized environments and is not a standard Windows remote access tool.

Because the technician needs to verify a Windows web server's operational status using a built-in method, RDP is the most appropriate and likely technology, making C the correct answer.

NEW QUESTION # 123

.....

Will you feel that the product you have brought is not suitable for you? One trait of our 220-1202 exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our 220-1202 exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our 220-1202 Study Materials, and know how to choose the different versions before you buy our products. On the other hand, using free trial downloading before purchasing, I can promise that you will have a good command of the function of our 220-1202 exam prepare. According to free trial downloading, you will know which version is more suitable for you in advance and have a better user experience.
