Reliable Microsoft Real SC-401 Exam Answers Offer You The Best Latest Test Prep | Administering Information Security in Microsoft 365

The SC-401 web-based practice exam requires no installation so you can start your preparation instantly right after you purchase. With thousands of satisfied customers around the globe, questions of the Administering Information Security in Microsoft 365 (SC-401) exam dumps are real so you can pass the Microsoft SC-401 certification on the very first attempt. Hence, it reduces your chances of failure and you can save money and time as well.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details
Topic 1	• Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.

Topic 2	• Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 3	• Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.
Topic 4	• Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.

2026 Real SC-401 Exam Answers | Valid Administering Information Security in Microsoft 365 100% Free Latest Test Prep

ExamTorrent is a wonderful study platform that can transform your effective diligence in to your best rewards. By years of diligent work, our experts have collected the frequent-tested knowledge into our SC-401 exam materials for your reference. So our SC-401 Practice Questions are triumph of their endeavor. I can say that no one can know the SC-401 study guide better than them and our quality of the SC-401 learning quiz is the best.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q149-Q154):

NEW QUESTION # 149
You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Cloud Apps.
You plan to deploy a Defender for Cloud Apps file policy that will be triggered when the following conditions are met:
A file is shared externally.
A file is labeled as internal only.
Which filter should you use for each condition? To answer, drag the appropriate filters to the correct conditions. Each filter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Filters

Filters	Answer Area	Filter
Access level	When a file is shared externally.	Access level
Collaborators		Sensitivity label
Matched policy	When a file is labelled as Internal only.	
Sensitivity label		

Explanation:

Filters	Answer Area	Filter
Access level	When a file is shared externally.	Access level
Collaborators		
Matched policy	When a file is labelled as Internal only.	Sensitivity label
Sensitivity label		

NEW QUESTION # 150

You need to meet the technical requirements for the Site1 documents.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Create a sensitivity label.
- Wait 24 hours and then turn on the policy.
- Create a sensitive info type.
- Create a retention label.
- Create an auto-labeling policy.

Answer Area

Answer:

Explanation:

Actions

Create a sensitivity label.

Wait 24 hours and then turn on the policy.

Create a sensitive info type.

Create a retention label.

Create an auto-labeling policy.

Answer Area

Create a sensitive info type.

Create a retention label.

Create an auto-labeling policy.

Explanation:

A screenshot of a questionnaire AI-generated content may be incorrect.

Actions

Wait 24 hours and then turn on the policy.

Create a retention label.

Answer Area

Create a sensitive info type.

Create a sensitivity label.

Create an auto-labeling policy.

The goal is to automatically label documents in Site1 that contain credit card numbers. To achieve this, we need a sensitivity label with an auto-labeling policy based on a sensitive info type that detects credit card numbers.

Step 1: Create a Sensitive Info Type

\# A sensitive info type is needed to detect credit card numbers in documents.

\# Microsoft Purview includes built-in sensitive info types for credit card numbers, but we can also create a custom one if necessary.

Step 2: Create a Sensitivity Label

\# A sensitivity label is required to classify and protect documents containing sensitive information.

\# This label can apply encryption, watermarking, or access controls to credit card data.

Step 3: Create an Auto-Labeling Policy

\# An auto-labeling policy ensures that the sensitivity label is applied automatically when credit card numbers are detected in Site1.

\# This policy is configured to scan files and automatically apply the correct sensitivity label.

NEW QUESTION # 151

You have a Microsoft 365 E5 subscription that contains four users named User1. User2, User3, and User4 and a file named File1.docx. File1 has a sensitivity label applied. The label is configured as shown in the following table.

User	Permission
User1	Owner
User2	Editor
User3	Restricted Editor
User4	Viewer

Which users can summarize File1 by using Microsoft 365 Copilot?

- A. User1 and User2 only
- B. User1, User2, User3. and User4
- C. User1 only
- D. User1, User2. and User3 only

Answer: A

NEW QUESTION # 152
You have a Microsoft 365 subscription.
You create a new trainable classifier.
You need to train the classifier.
Which source can you use to train the classifier?

- A. an NFS file share
- B. an A2ure Files share
- C. a Microsoft SharePoint Online site
- D. an on-premises Microsoft SharePoint Server site

Answer: C

Explanation:
Trainable classifiers in Microsoft Purview require a source of documents that can be labeled as examples of what the classifier should recognize. Supported sources include SharePoint Online and Exchange Online mailboxes. On-premises SharePoint Server sites, Azure File shares, and NFS file shares are not supported for classifier training.
Reference: Trainable classifiers in Microsoft Purview

NEW QUESTION # 153
You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Cloud Apps.
You plan to deploy a Defender for Cloud Apps file policy that will be triggered when the following conditions are met:
A file is shared externally.
A file is labeled as internal only.
Which filter should you use for each condition? To answer, drag the appropriate filters to the correct conditions. Each filter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

In Defender for Cloud Apps file policies, Access level is the filter used to detect how a file is exposed (e.g., Public on the internet, External, Internal, Private). Choosing Access level = External matches files that are shared with users outside your organization-exactly the "shared externally" condition.

Ref: Microsoft Defender for Cloud Apps - Create/Use file policies (File filters: Access level), Microsoft Learn.

See: Microsoft Defender for Cloud Apps > Policies > File policies documentation describing file filters including Access level and its values (Public, External, Internal, Private).

To target files that carry an MIP/AIP classification such as Internal Only, you use the Sensitivity label file filter. Defender for Cloud Apps ingests Microsoft Purview Information Protection labels and lets you build file policies that trigger when a specific label is applied.

Ref: Integrate Microsoft Information Protection with Microsoft Defender for Cloud Apps and File policies - Sensitivity label filter, Microsoft Learn.

These docs explain that MCAS can filter and govern files by Sensitivity label and apply governance based on labels such as Internal Only, Confidential, etc.

Why not the other options?

Collaborators filters by specific users/domains; it's useful to find files shared with a particular external user but not for the generic "shared externally" condition.

Matched policy is for files already flagged by another policy/DLP engine and does not detect "Internal Only" labeling by itself.

NEW QUESTION # 154

......

If you are sure you have learnt all the SC-401 exam questions, you have every reason to believe it. ExamTorrent's SC-401 exam dumps have the best track record of awarding exam success and a number of candidates have already obtained their targeted SC-401 Certification relying on them. They provide you the real exam scenario and by doing them repeatedly you enhance your confidence to SC-401 questions answers without any hesitation.
