

Valid Braindumps 156-536 Ppt & Instant 156-536 Download

Valid Braindumps PSPO-II Files: 2023 Realistic Scrum Professional Scrum Product Owner II Reliable Exam Price Pass Guaranteed

Our website focus on helping candidates pass Scrum certification exams with our valid PSPO-II practice questions and detailed test answers. The most reliable PSPO-II dumps pdf are written by our professional IT experts who have rich experience in actual test. And you will be enjoyed one-year free updating after you make payment.

Scrum PSPO-II Exam consists of 30 multiple-choice questions that must be completed in 90 minutes. PSPO-II exam assesses the candidate's understanding of advanced Product Owner concepts such as product value, stakeholder management, product backlog refinement, and optimizing the product value. PSPO-II exam also evaluates the candidate's ability to apply the Scrum framework to real-world scenarios and make informed decisions based on the Scrum values and principles.

P.S. Free & New 156-536 dumps are available on Google Drive shared by PassTorrent: <https://drive.google.com/open?id=1pqWflwMNzwpGBe1LxKA8o6MBLo7YV4fJ>

If you don't have enough time to study for your CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) exam, PassTorrent provides CheckPoint 156-536 Pdf questions. You may quickly download CheckPoint 156-536 exam questions in PDF format on your smartphone, tablet, or desktop. You can Print CheckPoint 156-536 pdf questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go. CheckPoint evolves swiftly, and a practice test may become obsolete within weeks of its publication. We provide free updates for CheckPoint 156-536 Exam Questions for three months after the purchase to ensure you are studying the most recent CheckPoint solutions.

CheckPoint 156-536 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Harmony Endpoint Security Management: This section focuses on the skills of Harmony Endpoint Security Professionals and covers the management aspects of Harmony Endpoint Security. It emphasizes how to effectively configure and manage security policies across endpoint devices.

Topic 2	<ul style="list-style-type: none"> • Troubleshooting: In this final section, CheckPoint Security Administrators will demonstrate their troubleshooting skills related to Harmony Endpoint. This involves identifying and resolving issues that may arise during deployment or operation of the endpoint security solution.
Topic 3	<ul style="list-style-type: none"> • Introduction to Harmony Endpoint: This section measures the skills of CheckPoint Security Administrators about the fundamental concepts of Harmony Endpoint. It introduces candidates to the capabilities of the Harmony Endpoint solution, which is designed to protect endpoint devices from various cyber threats.
Topic 4	<ul style="list-style-type: none"> • Harmony Endpoint Management as a Service: This section targets Harmony Endpoint Security Professionals, focusing on managing endpoint security as a service. It covers the cloud-based management capabilities of Harmony Endpoint, allowing for scalable deployment and policy management.

Instant 156-536 Download & 156-536 Latest Real Test

Customizable Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) practice tests (desktop and web-based) of PassTorrent are made to ensure excellent practice of applicants. Users can take multiple 156-536 practice exams. And the previous exam progress can be saved, so candidates can track it easily whenever they want to see the mistakes. The exam is tough to pass, and that's why 156-536 provides our customers with all the best CheckPoint 156-536 exam dumps to pass the exam on the first try.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q65-Q70):

NEW QUESTION # 65

What GUI options do you have to access the Endpoint Security Management Server in a cloud environment?

- A. SmartConsoleandGaiaWebUI
- B. SmartEndpoint Distributor
- C. Nothing, there is no Cloud Support for Endpoint Management Server.
- **D. Infinity Portal and Web Management Console**

Answer: D

NEW QUESTION # 66

Does the Endpoint Client GUI provide automatic or manual prompting to protect removable storage media usage?

- A. Automatic Only
- B. Manual Only
- C. Neither automatic nor manual
- **D. Either automatic or manual**

Answer: D

NEW QUESTION # 67

In the POLICY Tab of the Harmony Endpoint portal for each software capability (Threat Prevention, Data Protection, etc.), rules can be created to protect endpoint machines. Choose the true statement.

- A. There are only rules for the Harmony Endpoint Firewall capability. All other capabilities only include Actions.
- B. The default rule is a global rule that only applies to Computers. Rules for Users must be added manually by the administrator.
- **C. The default rule is a global rule which applies to all users and computers in the organization.**
- D. There are no rules to start with, and administrators must create rules in order to deploy the capability policies, actions, and

behavior.

Answer: C

Explanation:

In the Harmony Endpoint portal, the POLICY Tab is used to manage security policies for various software capabilities such as Threat Prevention, Data Protection, and others. These policies are enforced through rules that dictate how each capability behaves on endpoint machines. TheCP_R81.

20_Harmony_Endpoint_Server_AdminGuide.pdf provides clear evidence on how these rules are structured by default.

Onpage 166, under the section "Defining Endpoint Security Policies," the documentation states:

"You create and assign policies to the root node of the organizational tree as a property of each Endpoint Security component." This indicates that a default policy (or rule) is established at the root level of the organizational hierarchy, inherently applying to all entities- users and computers- within the organization unless overridden by more specific rules. Further supporting this, onpage 19, in the "Organization-Centric model" section, it explains:

"You then define software deployment and security policies centrally for all nodes and entities, making the assignments as global or as granular as you need." This global assignment at the root node confirms that the default rule encompasses all users and computers in the organization, aligning with Option D. The documentation does not suggest that the default rule is limited to computers only (Option A), nor does it state that no rules exist initially (Option B), or that rules are exclusive to the Firewall capability (Option C). Instead, each capability has its own default policy that applies globally until customized.

* Option A is incorrect because the default rule is not limited to computers. Page 19 notes: "The Security Policies for some Endpoint Security components are enforced for each user, and some are enforced on computers," showing that policies can apply to both based on the component, not just computers.

* Option B is false as the guide confirms default policies exist at the root node, not requiring administrators to create them from scratch (see page 166).

* Option C is inaccurate since rules exist for all capabilities (e.g., Anti-Malware on page 313, Media Encryption on page 280), not just Firewall, and all capabilities involve rules, not just actions.

NEW QUESTION # 68

Which information can we find on the Operational Overview dashboard?

- A. Hosts under Attack, Active Attacks, Blocked Attacks
- B. Active Attacks. Deployment status. Pre-boot status, Anti-Malware update. Harmony Endpoint Version and Operating system
- C. Desktops. Servers, Active Alerts, Anti-Malware update, Harmony Endpoint Version
- D. Active Endpoints. Active Alerts, Deployment status, Pre-boot status, Encryption Status

Answer: D

NEW QUESTION # 69

When is the heartbeat initiated?

- A. During the first sync
- B. After the first sync
- C. Before the first sync
- D. After the last sync

Answer: B

Explanation:

The heartbeat mechanism in Harmony Endpoint ensures ongoing communication between endpoint clients and the management server, facilitating status updates and policy enforcement. The Check Point Harmony Endpoint Server Administration Guide R81.20 clarifies the timing of this process.

Onpage 27, under "Client to Server Communication," the guide notes:

"The client is always the initiator of the connections. Most communication is over HTTPS (TCP/443), including Policy downloads and Heartbeat." This establishes that the client initiates heartbeats, but the exact timing is detailed onpage 28, under "The Heartbeat

Interval":

"Endpoint clients send 'heartbeat' messages to the Endpoint Security Management Server to check the connectivity status and report updates." Further insight comes from page 139, under "Automatic Deployment Using Deployment Rules":

"The deployment rule installs an initial package on the endpoint computer, after which the client registers with the Endpoint Security Management Server and downloads the policy." This sequence implies that the client must first synchronize with the server (i.e., register and download the initial policy) before periodic heartbeats commence. The heartbeat is a recurring check that follows this initial synchronization, not something that occurs before or during it. Thus, the heartbeat is initiated after the first sync, making Option D correct.

Evaluating the alternatives:

* Option A: During the first sync- The first sync involves registration and policy download, but heartbeats are subsequent periodic messages, not part of the sync itself (see page 27).

* Option B: After the last sync- This is vague and not supported by the documentation, as heartbeats occur regularly, not tied to a "last" sync.

* Option C: Before the first sync- This is impossible, as the client cannot communicate with the server before establishing a connection and syncing (see page 139).

Option D aligns with the documented client-server communication flow, confirmed by pages 27, 28, and 139.
