We have invested a lot of efforts to develop the C_SEC_2405 Training Questions. Please trust us. You absolutely can understand them after careful learning.

SAP Certified Associate - Security Administrator Sample Questions (Q75-Q80):

NEW QUESTION # 75

What must you do if you want to enforce an additional authorization check when a user starts an SAP transaction?

- A. Assign authorization object S_START to the chosen transaction code with transaction SU24 and specify the Program ID and Object Type.
- B. Assign the authorization object to be checked to the chosen transaction code with transaction SU24 and set Default Status to "Yes".
- C. Assign the authorization object to be checked to the chosen transaction code in the SAP Default authorization data using transaction SU22 and set Check Indicator to "Check".
- D. Assign the authorization object and permissions to the chosen transaction code using transaction SE93.

Answer: A

Explanation:

To enforce an additional authorization check when a user starts an SAP transaction, you need to assign the specific authorization object to the transaction code. This ensures that the system performs an extra check against the user's authorizations before allowing access to the transaction.

* Use Transaction SU24:

* SU24 is the transaction used to maintain authorization default data for transactions and other executables. It allows you to assign authorization objects to transactions and set the check indicators.

* Assign Authorization Object S_START:

* Authorization Object S_START is used to control the start of transactions. By assigning this object to a transaction code, you can specify additional checks based on the Program ID and Object Type.

* In SU24, navigate to the desired transaction code and add S_START to its list of authorization objects.

* Specify Program ID and Object Type:

* Within the authorization object S_START, set the Program ID and Object Type fields to define the scope of the check.

* This setup ensures that when a user attempts to start the transaction, the system checks for the specified authorizations in their user profile.

SAP Security References:

* SAP Help Portal: Authorization Checks and SU24 Maintenance

* SAP Documentation: Using Authorization Object S_START for Transaction Start Checks

* SAP Note: Best Practices for Maintaining Authorization Data with SU24

NEW QUESTION # 76

Which limitations apply to restricted users in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. They can only connect to the database using HTTP/HTTPS.
- B. They cannot create objects in the database.
- C. They cannot connect via ODBC or JDBC.
- D. They can only create objects in their own database schema.
- E. They only have full SQL access via the SQL console.

Answer: A,B,D

NEW QUESTION # 77

In the administration console of the Cloud Identity Services, which system property types can you add? Note: There are 2 correct answers to this question.

- A. Internal
- B. Credential
- C. Default
- D. Standard

Answer: A,D

NEW QUESTION # 78

When you maintain authorizations for SAPUI5 Fiori apps, which of the following object types is the front-end authorization object type?

- A. TADIR IWSG - SAP Gateway: Service Groups Metadata
- B. TADIR IWSV - SAP Gateway Business Suite Enablement-Service
- C. TADIR INA1 InA Service
- D. TADIR G4BA-SAP Gateway Odata V4 Backend Service Group & Assignments

Answer: B

NEW QUESTION # 79

Under which of the following conditions can you merge authorizations for the same object during role maintenance? Note: There are 2 correct answers to this question.

- A. The maintenance status of the changed authorizations must match the status of a manual authorization.
- B. The activation status and the maintenance status of the authorizations must NOT match.
- C. The activation status and the maintenance status of the authorizations must match.
- D. The activation status of a manual authorization must match the status of the changed authorizations.

Answer: C,D

Explanation:

- * Context: Merging authorizations in SAP role maintenance ensures that multiple authorizations for the same object are harmonized.
- * Solution Descriptions:
- * B: Matching activation and maintenance statuses ensures consistent merging.
- * D: Manual authorizations can be merged only if their activation status matches the changed authorizations.
