PRINCE2 Agile Foundation Sample Questions (Q128-Q133):

NEW QUESTION # 128

In which area is Agile strongest when blending with PRINCE2?

- A. Project management
- B. Project direction
- C. Product management
- D. Product delivery

Answer: D

NEW QUESTION # 129

What needs to happen when new detailed requirements are added to a timebox?

- A. The delivery milestones should be reviewed and re-planned
- B. Formal change control should be applied
- C. More people should be added to the delivery team
- D. Requirements of a similar level of effort should be removed

Answer: D

NEW QUESTION # 130

Which practice has the purpose of controlling uncertainties that would affect the project's objectives?

- A. Issues
- B. Quality
- C. Plans
- D. Risk

Answer: D

Explanation:

The Risk practice is specifically aimed at controlling uncertainties that could impact the achievement of the project's objectives. In PRINCE2 Agile, risk management involves identifying, assessing, and controlling threats and opportunities to reduce negative impacts and maximize positive outcomes.

Effective risk management is a core theme and practice in PRINCE2 Agile and is crucial for agile environments where change and uncertainty are inherent. The practice ensures that risks are continuously monitored and appropriate responses are planned and implemented. This proactive management helps keep the project viable and aligned with business justification.

While plans support managing scope and resources, issues deal with current problems rather than potential future events, and quality ensures that products meet requirements, risk management uniquely focuses on uncertainty.

The PRINCE2 Agile guidance emphasizes integrating agile techniques such as frequent reviews and retrospectives to improve risk

awareness and control.

NEW QUESTION # 131

What should be included when transitioning from a project to business as usual to ensure continual improvement?

- A. Agreeing applicable Service Level Agreements (SLAs)
- B. Defining Key Performance Indicators (KPIs)
- C. Establishing regular feedback loops
- D. Providing access to Kanban or team boards

Answer: C

Explanation:

When transitioning from project delivery into business as usual (BAU), establishing regular feedback loops is crucial to ensure continual improvement. Feedback loops enable ongoing monitoring, learning, and adaptation of both products and processes post-transition. They provide mechanisms for capturing user experiences, operational issues, and evolving requirements that inform future iterations and enhancements.

Feedback loops can take many forms, such as user surveys, retrospectives, operational reviews, or service desk reports. Their regularity and structure ensure that BAU teams remain aligned with customer needs and organizational goals while adapting to changes effectively. This approach fosters a culture of continuous learning and agility even after the formal project has closed. Providing access to Kanban or team boards (A) supports transparency and workflow management but is more tactical and internal to teams rather than a strategic approach to continuous improvement across BAU.

Agreeing on SLAs (C) and KPIs (D) define performance and service targets but do not inherently drive feedback or improvement cycles without mechanisms for learning and response.

PRINCE2 Agile highlights the importance of feedback loops as part of the 'progress' and 'quality' practices extended into BAU to sustain value delivery.

NEW QUESTION # 132

What is the purpose of the 'agile enablement' workshop?

- A. To identify, assess, and plan for risks associated with project delivery
- B. To identify, assess, and plan for risks associated with agile adoption
- C. To identify, assess, and plan for risks associated with transitioning products into operations
- D. To identify, assess, and plan for risks associated with business as usual

Answer: B

Explanation:

The Agile Enablement Workshop is specifically designed to support the transition of teams and organizations into agile ways of working. Its primary purpose is to identify, assess, and plan for risks related to agile adoption. This includes challenges like cultural resistance, skills gaps, tooling needs, and process adaptations.

The workshop ensures that these risks are proactively managed to smooth the agile transformation and increase the chances of successful agile delivery.

By focusing on agile adoption risks rather than project delivery or business as usual, the workshop addresses the foundational changes required for agility at team and organizational levels. Effective enablement workshops facilitate buy-in, identify training needs, and help tailor agile frameworks to the organization's context.
