Fortinet FCSS - FortiSASE 25 Administrator Sample Questions (Q50-Q55):

NEW QUESTION # 50
Refer to the exhibit.
The daily report for application usage shows an unusually high number of unknown applications by category. What are two possible explanations for this? (Choose two.)

- A. Zero trust network access (ZTNA) tags are not being used to tag the correct users.
- B. Certificate inspection is not being used to scan application traffic.
- C. Deep inspection is not being used to scan traffic.
- D. The inline-CASB application control profile does not have application categories set to Monitor

Answer: C,D

NEW QUESTION # 51
A customer wants to upgrade their legacy on-premises proxy to a could-based proxy for a hybrid network. Which FortiSASE features would help the customer to achieve this outcome?

- A. SD-WAN and NGFW
- B. SD-WAN and inline-CASB
- C. zero trust network access (ZTNA) and next generation firewall (NGFW)
- D. secure web gateway (SWG) and inline-CASB

Answer: D

Explanation:
For a customer looking to upgrade their legacy on-premises proxy to a cloud-based proxy for a hybrid network, the combination of Secure Web Gateway (SWG) and Inline Cloud Access Security Broker (CASB) features in FortiSASE will provide the necessary capabilities.
Secure Web Gateway (SWG):
SWG provides comprehensive web security by inspecting and filtering web traffic to protect against web-based threats.
It ensures that all web traffic, whether originating from on-premises or remote locations, is inspected and secured by the cloud-based proxy.
Inline Cloud Access Security Broker (CASB):
CASB enhances security by providing visibility and control over cloud applications and services.
Inline CASB integrates with SWG to enforce security policies for cloud application usage, preventing unauthorized access and data leakage.
FortiOS 7.2 Administration Guide: Details on SWG and CASB features.
FortiSASE 23.2 Documentation: Explains how SWG and inline-CASB are used in cloud-based proxy solutions.

NEW QUESTION # 52
Refer to the exhibit.
An organization must inspect all the endpoint internet traffic on FortiSASE, and exclude Google Maps traffic from the FortiSASE VPN tunnel and redirect it to the endpoint physical interface.
Which configuration must you apply to achieve this requirement?

- A. Configure a steering bypass tunnel firewall policy using Google Maps FQDN to exclude and redirect the traffic.
- B. Add the Google Maps URL in the zero trust network access (ZTNA) TCP access proxy forwarding rule.
- C. Exempt Google Maps in URL filtering in the web filter profile.
- D. Add the Google Maps URL as a steering bypass destination in the endpoint profile.

Answer: D

Explanation:
To exclude specific internet traffic (such as Google Maps) from being tunneled through FortiSASE and instead direct it out the local endpoint interface, you must configure it as a steering bypass destination in the FortiClient endpoint profile. This ensures traffic matching the URL bypasses the FortiSASE tunnel.

NEW QUESTION # 53
Refer to the exhibits.
A FortiSASE administrator has configured FortiSASE as a spoke to a FortiGate hub. The tunnel is up to the FortiGate hub. However, the remote FortiClient is not able to access the web server hosted behind the FortiGate hub.
Based on the exhibits, what is the reason for the access failure?

- A. The server subnet BGP route was not received on FortiSASE.
- B. A private access policy has denied the traffic because of failed compliance
- C. The hub is not advertising the required routes.
- D. The hub firewall policy does not include the FortiClient address range.

Answer: A

Explanation:
The FortiSASE BGP learned routes do not include the 10.160.160.0/24 subnet (server network). Although the FortiGate hub is advertising this route (10.160.160.0/24) to FortiSASE, it is not visible in the FortiSASE BGP route table - indicating a routing issue. Without this route, FortiSASE cannot forward traffic from FortiClient to the server.

NEW QUESTION # 54
Which two additional components does FortiSASE use for application control to act as an inline-CASB? (Choose two.)

- A. SSL deep inspection
- B. Web filter with inline-CASB
- C. DNS filter
- D. intrusion prevention system (IPS)

Answer: A,D
