## Microsoft Power Platform Solution Architect Sample Questions (Q169-Q174):

NEW QUESTION # 169

A company is creating a Power Platform solution to manage employees.

The company has the following requirements:

- \* Allow only the human resource manager to change an employee's employment status when an employee is dismissed.
- \* Allow only approved device types to access the solution and company data.

You need to recommend a solution that meets the requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Field security profile

Record-level permissions are granted at the entity level, but you may have certain fields associated with an entity that contain data that is more sensitive than the other fields. For these situations, you use field-level security to control access to specific fields.

Field-level security is available for the default fields on most out-of-box entities, custom fields, and custom fields on custom entities.

Field-level security is managed by the security profiles.

Box 2: Compliancy policy

Compliance policy settings - Tenant-wide settings that are like a built-in compliance policy that every device receives. Compliance policy settings set a baseline for how compliance policy works in your Intune environment, including whether devices that haven't received any device compliance policies are compliant or noncompliant.

Note: Mobile device management (MDM) solutions like Intune can help protect organizational data by requiring users and devices to meet some requirements. In Intune, this feature is called compliance policies.

Compliance policies in Intune:

Define the rules and settings that users and devices must meet to be compliant.

Include actions that apply to devices that are noncompliant. Actions for noncompliance can alert users to the conditions of noncompliance and safeguard data on noncompliant devices.

Can be combined with Conditional Access, which can then block users and devices that don't meet the rules.

### NEW QUESTION # 172

A company provides mobile diagnostic imaging services. You are designing a Power Apps solution to manage patient appointments and procedures.

Patient records are stored within the company's cloud patient billing system. The patient ID must be the only information stored within the app. The patient name and date of birth must be visible to the technician to verify the patient's identity.

You need to recommend a solution to display the patient information.

What should you recommend?

- A. Privacy preference
- **B. Virtual table**
- C. Custom dataflow
- D. Data gateway
- E. Business rule

**Answer: B**

Explanation:

A virtual table is a custom table in Microsoft Dataverse that has columns containing data from an external data source. Virtual tables appear in your app to users as regular table rows, but contain data that is sourced from an external database, such as an Azure SQL Database. Rows based on virtual tables are available in all clients including custom clients developed using the Dataverse web services.

Incorrect Answers:

D: The On-premises data gateway provides secure data transfer between on-premises data sources and your Azure Analysis Services servers in the cloud.

### NEW QUESTION # 173

A company uses Microsoft Power Platform. The company has a database that has two tables: Department and Employee.

The company plans to define a data model to meet the following requirements:

- \* Each row in the Department table can be linked to more than one row in the Employee table.
- \* Each row in the Employee table can be linked to only one row in the Department table,
- \* Action taken on one table will not affect the other table.

You need to define the relationship between the tables. Which relationship type should you use?

- A. many-to-many relationship and parental relationship behavior
- B. many-to-one relationship and Referential, Remove Link
- **C. many-to-one relationship and Referential, Restrict Delete**
- D. many-to-many relationship and custom relationship behavior

**Answer: C**
