Cisco 100-140 Exam Syllabus Topics:

Topic	Details
Topic 1	• Hardware Uses: This domain targets a Desktop Support Technician and focuses on following basic safety procedures related to electrical shock, ESD, and fire hazards. It involves assisting users in locating information about devices including hardware specs and network details using Windows and macOS tools. It covers identifying and understanding various ports and cables, installing and upgrading desktop components like RAM and storage, and troubleshooting common hardware issues while managing driver and firmware updates.
Topic 2	• Job Roles: This section evaluates an IT Support Technician's ability to use remote access tools (such as Remote Desktop, Cisco Webex, and TeamViewer) to assist users and perform support activities. It also includes utilizing troubleshooting tools and resources, such as AI research, search engines, technical forums, and knowledge bases, while being aware of ethical, privacy, and security considerations related to AI and other technologies.
Topic 3	• Common Threats and Prevention: This domain measures the knowledge of an IT Security Support Technician and covers recognizing end-user security threats including phishing, malware, and unauthorized access attempts. It emphasizes basic investigation steps, helping users run malware scans, promoting strong password practices, understanding social engineering tactics targeting help desk roles, and the importance of company policies and confidentiality guidelines to protect sensitive data.
Topic 4	• Connectivity and Resource Access Issues: This section measures skills of a Network Support Technician and involves assisting users to establish access to network resources, understanding directory services like Active Directory and cloud access management platforms, and managing multifactor authentication. It also includes troubleshooting connectivity problems with peripherals such as printers, scanners, and teleconferencing devices, as well as verifying basic network settings and diagnosing connectivity using various network commands and tools.

Cisco Certified Support Technician (CCST) IT Support Sample Questions (Q86-Q91):

NEW QUESTION # 86

What should a help desk technician do first if they receive an unexpected call from someone claiming to be an executive requesting immediate access to sensitive information?

- **A. Verify the caller's identity through known internal channels before proceeding**
- B. Provide the requested information quickly to maintain executive satisfaction
- C. Direct the caller to send an email request for audit purposes
- D. Hang up and ignore the request as it is likely fraudulent

Answer: A

Explanation:

Correct Answer. B. Verify the caller's identity through known internal channels before proceeding Verifying the caller's identity through direct, trusted company channels is crucial to prevent potential social engineering where an attacker might impersonate a company executive.

Option A is incorrect because providing sensitive information without verification is risky and violates standard security protocols.

Option C is incorrect because sending an email does not verify the identity of the requester and may still allow social engineering tactics to succeed.

Option D is incorrect because simply hanging up could potentially disregard a legitimate request and fails to confirm or deny the authenticity of the call.

NEW QUESTION # 87

A user needs to connect a laptop with a DisplayPort to a projector that only has an HDMI input. What type of adapter should the IT support technician recommend to facilitate this connection?

- A. DisplayPort to DVI adapter
- B. DisplayPort to VGA adapter
- C. DisplayPort to USB-C adapter
- **D. DisplayPort to HDMI adapter**

Answer: D

Explanation:

Correct Answer. C. DisplayPort to HDMI adapter To connect a DisplayPort output from a laptop to an HDMI input on a projector, a DisplayPort to HDMI adapter is required. This adapter will convert the DisplayPort video signal into an HDMI signal compatible with the projector, ensuring the video output is transmitted correctly.

Option A is incorrect because a DisplayPort to DVI adapter would not fit an HDMI input as DVI and HDMI use different signaling and connectors.

Option B is incorrect because VGA is an analog signal, whereas HDMI is digital, making a DisplayPort to VGA adapter inappropriate for a digital-only HDMI input.

Option D is incorrect because a DisplayPort to USB-C adapter would not be suitable unless the projector specifically supports video input through USB-C, which is not indicated in this scenario.

NEW QUESTION # 88

You are using remote access software to help a user who is encountering a complex error message that you have not seen before. To find a solution, you decide to consult a technical forum. Which approach should you take to effectively use the forum for troubleshooting?

- A. Avoid the forum and try solving the problem through trial and error
- **B. Search the forum for the exact error message to find previous discussions or solutions**
- C. Use the forum's chat feature to ask real-time questions from whoever is online
- D. Post a vague question about the error without specific details to get a broad range of solutions

Answer: B

Explanation:

Correct Answer. B. Search the forum for the exact error message to find previous discussions or solutions Searching for the specific error message can lead directly to any existing discussions or documented solutions, increasing the likelihood of a quick and accurate resolution.

Option A is incorrect. Posting vague questions can lead to generic or irrelevant responses that may not address the specific issue.

Option C is incorrect. While real-time chats can provide immediate feedback, they might not offer the depth of insight or historical solutions that specific threads do.

Option D is incorrect. Avoiding the use of available resources such as forums can prolong the resolution time and decrease efficiency.

NEW QUESTION # 89

An engineering firm is evaluating new software for CAD and 3D modeling that specifies 16 GB of RAM as the recommended requirement. The IT department is considering three different models of laptops.

Which laptop model should they choose based on RAM specifications?

- A. Laptop with 8 GB of RAM
- **B. Laptop with 16 GB of RAM**
- C. Laptop with 32 GB of RAM
- D. Laptop with 12 GB of RAM

Answer: B

Explanation:

Correct Answer. C. Laptop with 16 GB of RAM For CAD and 3D modeling software that recommends 16 GB of RAM, choosing a laptop with exactly 16 GB ensures the software can run effectively without unnecessary expenditure on excessively high specifications.

Option A is incorrect because 8 GB of RAM is below the recommended requirement and may result in slower performance and inability to handle complex tasks efficiently.

Option B is incorrect because 12 GB of RAM, while closer to the recommendation, still falls short of the optimal requirement

needed to ensure peak software performance.

Option D is incorrect because although 32 GB of RAM would offer excellent performance, it is not cost-effective given the stated requirements and may represent unnecessary spending

NEW QUESTION # 90

A healthcare organization needs to ensure that their data is stored in compliance with regional regulations.

Which Azure service provides the best solution for compliant, geo-redundant storage?

- **A. Azure Geo-Redundant Storage (GRS)**
- B. Azure Site Recovery
- C. Azure SQL Database
- D. Azure Active Directory

Answer: A

Explanation:

Azure Geo-Redundant Storage (GRS) replicates data to a secondary region far from the primary location, ensuring data durability and compliance with regulations that require geographic redundancy.

Option A is incorrect because Azure Active Directory is a cloud-based identity and access management service, not a data storage solution.

Option B is incorrect as Azure Site Recovery is primarily used for business continuity and disaster recovery, not for data storage compliance.

Option C is incorrect because, while Azure SQL Database provides scalable and secure database services, it does not inherently offer geo-redundancy like GRS.
