100-150 Online Tests, Latest Test 100-150 Discount

One of the main unique qualities of the Exams-boost Cisco Exam Questions is its ease of use. Our practice exam simulators are user and beginner friendly. You can use Cisco Certified Support Technician (CCST) Networking (100-150) PDF dumps and Web-based software without installation. Cisco Certified Support Technician (CCST) Networking (100-150) PDF questions work on all the devices like smartphones, Macs, tablets, Windows, etc.

Cisco Certified Support Technician (CCST) Networking Sample Questions (Q12-Q17):

NEW QUESTION # 12

You need to connect a computer's network adapter to a switch using a 1000BASE-T cable. Which connector should you use?

- A. OS2 LC
- B. RJ-11
- **C. RJ-45**
- D. Coax

Answer: C

Explanation:

- * 1000BASE-T Cable: This refers to Gigabit Ethernet over twisted-pair cables (Cat 5e or higher).
 - * Connector: RJ-45 connectors are used for Ethernet cables, including those used for 1000BASE-T.
 - * Coax: Used for cable TV and older Ethernet standards like 10BASE2.
 - * RJ-11: Used for telephone connections.
 - * OS2 LC: Used for fiber optic connections.
- Reference: * Ethernet Standards and Cables: Ethernet Cable Guide

NEW QUESTION # 13

Examine the following output:

Examine the following command output:

```
C:\Admin>tracert www.cisco.com
5
over a maximum of 30 hops:
  1  <1 ms  <1 ms  <1 ms  2603-6081-943f-72ec-a240-a0ff-fe67-3c14.res6.big.com [2603:6081:943f:72ec:a240:a0ff:fe67:3c14]
  2  13 ms  11 ms  16 ms  2603-90b3-0a00-01bb-0000-0000-0000-0001.wifi6.biginternet.com [2603:90b3:a00:1bb::1]
  3  17 ms  25 ms  18 ms  lag-61.zblnnc1001h.netops.exchange.com [2001:db8:a000:0:4::8:d4c]
  4  16 ms  13 ms  11 ms  lag-29.drhmncev02r.netops.exchange.com [2001:db8:a000:0:4::2:152]
  5  *      *      *      Request timed out.
  6  *      *      *      Request timed out.
  7  19 ms  18 ms  27 ms  lag-0.pr2.dca10.netops.provider.com [2001:db8:1998:0:4::517]
  8  21 ms  32 ms  23 ms  2001:db8:1998:0:3::639
  9  16 ms  15 ms  18 ms  vlan-10.r10.spine101.iad03.fab.netarch.provider.com [2600:1408:b400:40b::1]
 10  15 ms  17 ms  22 ms  vlan-110.r03.leaf101.iad03.fab.netarch.provider.com [2600:1408:b400:f03::1]
 11  17 ms  17 ms  23 ms  vlan-104.r08.tor101.iad03.fab.netarch.provider.com [2600:1408:b400:2908::1]
 12  25 ms  19 ms  19 ms  g2600-1408-c400-038d-0000-0000-0000-0b33.deploy.static.et.com [2600:1408:c400:38d::b33]

Trace complete.
```

Which two conclusions can you make from the output of the tracert command? (Choose 2.) Note: You will receive partial credit for each correct answer.

- A. The device sending the trace has IPv6 address 2600:1408:c400:38d :: b33.
- B. The routers at hops 5 and 6 are offline.
- C. The trace failed after the fourth hop.
- **D. The trace successfully reached the www.cisco.com server.**
- **E. The IPv6 address associated with the www.cisco.com server is 2600:1408: c400: 38d: : b33.**

Answer: D,E

Explanation:

- *Statement A: "The trace successfully reached the www.cisco.com server." This is true as indicated by the "Trace complete" message at the end, showing that the trace has reached its destination.
- *Statement C: "The IPv6 address associated with the www.cisco.com server is 2600:1408:c400:38d::b33." This is true because the final hop in the trace, which is the destination, has this IPv6 address.
- *Statement B: "The trace failed after the fourth hop." This is incorrect as the trace continues beyond the fourth hop, despite some intermediate timeouts.
- *Statement D: "The routers at hops 5 and 6 are offline." This is not necessarily true. The routers might be configured to not respond to traceroute requests.

*Statement E: "The device sending the trace has IPv6 address 2600:1408:c400:38d:b33." This is incorrect; this address belongs to the destination server, not the sender.

NEW QUESTION # 14

HOTSPOT

Computers in a small office are unable to access companypro.net. You run the ipconfig command on one of the computers. The results are shown in the exhibit.

```
DHCP Enabled. . . . . : Yes
Autoconfiguration Enabled . . . . : Yes
IPv4 Address. . . . . : 192.168.0.4 (Preferred)
Subnet Mask . . . . . : 255.255.255.0
Lease Obtained. . . . . : Sunday, January 8, 2023 11:00:02 AM
Lease Expires . . . . . : Sunday, January 8, 2023 12:00:12 PM
Default Gateway . . . . . : 192.168.0.1
DHCP Server . . . . . : 192.168.0.1
DNS Servers . . . . . : 8.8.8.8
                        8.8.4.4
NetBIOS over Tcpip. . . . . : Enabled
```

You need to determine if you can reach the router.

Which command should you use? Complete the command by selecting the correct options from each drop-down lists.

netstat	companypro.net
ping	192.168.0.1
ftp	localhost
nslookup	8.8.8.8

Answer:

Explanation:

netstat	companypro.net
ping	192.168.0.1
ftp	localhost
nslookup	8.8.8.8

Explanation:

To determine if you can reach the router, you should use the ping command followed by the IP address of the router. The ping command is a network utility used to test the reachability of a host on an Internet Protocol (IP) network and to measure the round-trip time for messages sent from the originating host to a destination computer.

The Default Gateway in the ipconfig results is typically the router's IP address in a home or small office network. In this case, the Default Gateway is 192.168.0.1, which is the address you would ping to check connectivity to the router.

Reference: =

How to Use the Ping Command

Testing Network Connectivity with the Ping Command

To determine if you can reach the router, you should use the ping command with the IP address of the router.

Command: ping

Target: 192.168.0.1

So, the completed command is:

ping 192.168.0.1

Step by Step Comprehensive and Detailed Explanation.

ping: The ping command sends ICMP Echo Request messages to the target IP address and waits for an Echo Reply. It is commonly used to test the reachability of a network device.

192.168.0.1: This is the IP address of the default gateway (the router) as shown in the ipconfig output. Pinging this address will help

determine if the computer can communicate with the router.
Reference: Using the ping Command: ping Command Guide

NEW QUESTION # 15

Move each cloud computing service model from the list on the left to the correct example on the right Note: You will receive partial credit for each correct answer.

Cloud Computing Service Models

IaaS

PaaS

SaaS

Examples

Three virtual machines are connected by a virtual network in the cloud.

Model

Users access a web-based graphics design application in the cloud for a monthly fee.

Model

A company develops applications using cloud-based resources and tools.

Model

Answer:

Explanation:

Cloud Computing Service Models

IaaS

PaaS

SaaS

Examples

Three virtual machines are connected by a virtual network in the cloud.

IaaS

Users access a web-based graphics design application in the cloud for a monthly fee.

SaaS

A company develops applications using cloud-based resources and tools.

PaaS

Explanation:

- * Three virtual machines are connected by a virtual network in the cloud.
- * Model: IaaS (Infrastructure as a Service)
- * Explanation: IaaS provides virtualized computing resources over the internet, including virtual machines, storage, and networks.
- * Users access a web-based graphics design application in the cloud for a monthly fee.
- * Model: SaaS (Software as a Service)
- * Explanation: SaaS delivers software applications over the internet, typically on a subscription basis, accessible via a web browser.
- * A company develops applications using cloud-based resources and tools.
- * Model: PaaS (Platform as a Service)
- * Explanation: PaaS provides a platform allowing customers to develop, run, and manage applications without dealing with the infrastructure.
- * IaaS (Infrastructure as a Service): Provides virtualized hardware resources that customers can use to build their own computing environments.
- * PaaS (Platform as a Service): Offers a platform with tools and services to develop, test, and deploy applications.
- * SaaS (Software as a Service): Delivers fully functional applications over the internet that users can access and use without managing the underlying infrastructure.

NEW QUESTION # 16

Which component of the AAA service security model provides identity verification?

- A. Authorization
- B. Auditing
- C. Authentication

- D. Accounting

Answer: C

Explanation:

The AAA service security model consists of three components: Authentication, Authorization, and Accounting.

*Authentication: This is the process of verifying the identity of a user or device. It ensures that only legitimate users can access the network or service.

*Authorization: This determines what an authenticated user is allowed to do or access within the network.

*Auditing/Accounting: This component tracks the actions of the user, including what resources they access and what changes they make.

Thus, the correct answer is C. Authentication.
