

100% BraindumpQuiz AD0-E716 Practice Questions get Pass

P.S. Free 2025 Adobe AD0-E716 dumps are available on Google Drive shared by BraindumpQuiz: <https://drive.google.com/open?id=1Sj5zQNzjWzj9cgQ0mqwcU6qAREYgkrhG>

This certification gives us more opportunities. Compared with your colleagues around you, with the help of our AD0-E716 preparation questions, you will also be able to have more efficient work performance. Our AD0-E716 study materials can bring you so many benefits because they have the following features. I hope you can use a cup of coffee to learn about our AD0-E716 training engine. Perhaps this is the beginning of your change.

Adobe AD0-E716 Exam Syllabus Topics:

Topic	Details
Topic 1	• Demonstrate knowledge of how routes work in Adobe Commerce • Describe how to use patches and recurring set ups to modify the database
Topic 2	• Identify how to access different types of logs • Demonstrate understanding of branching using CLI
Topic 3	• Explain the use cases for Git patches and the file level modifications in Composer
Topic 4	• Demonstrate knowledge of Adobe Commerce architecture • environment workflow • Demonstrate understanding of cloud user management and onboarding UI
Topic 5	• Demonstrate the ability to create new APIs or extend existing APIs • Demonstrate the ability to manage Indexes and customize price output
Topic 6	• Demonstrate the ability to use the queuing system • Demonstrate understanding of updating cloud variables using CLI
Topic 7	• Build, use, and manipulate custom extension attributes • Describe the capabilities and constraints of dependency injection

100% Pass Quiz Adobe AD0-E716 - Adobe Commerce Developer with Cloud

Add-on Updated Detailed Answers

Our latest AD0-E716 vce braindumps are written by our IT experts' wealth of knowledge and experience and can fully meet the demand of AD0-E716 real exam. From related websites or books, you might also see some Adobe free download study materials, but our AD0-E716 Exam crams are affordable, latest and comprehensive.

Adobe Commerce Developer with Cloud Add-on Sample Questions (Q69-Q74):

NEW QUESTION # 69

What are two features with Adobe Commerce Cloud that come out of the box? (Choose Two.)

- **A. Support ACL**
- B. Continuous deployment provided with the platform
- **C. Fastly**
- D. A built in connector with all major blog platforms

Answer: A,C

Explanation:

Two features that come out of the box with Adobe Commerce Cloud are Support ACL and Fastly. Support ACL is a feature that allows the developer to manage access control lists for different users and roles on the Adobe Commerce Cloud platform. The developer can create and assign permissions for different actions and resources on the project and environment levels. Fastly is a cloud-based caching service that improves site performance and security for Adobe Commerce Cloud projects. Fastly provides features such as CDN, image optimization, WAF, DDoS protection, etc. Verified Reference: [Magento 2.4 DevDocs] 3

NEW QUESTION # 70

An Adobe Commerce developer has created a before plugin for the save() function within the `Magento\Framework\App\Cache\Proxy` class. The purpose of this plugin is to add a prefix on all cache identifiers that fulfill certain criteria.

Why is the plugin not executing as expected?

- **A. The target Class implements `Magento\Framework\ObjectManager\NoninterceptableInterface`.**
- B. Cache identifiers are immutable and cannot be changed.
- C. Another around plugin defined for the same function does not call the callable.

Answer: A

Explanation:

According to the Plugins (Interceptors) guide for Magento 2 developers, plugins are class methods that modify the behavior of public class methods by intercepting them and running code before, after, or around them.

However, some classes in Magento 2 implement the `NoninterceptableInterface` interface, which prevents plugins from being generated for them. The `Magento\Framework\App\Cache\Proxy` class is one of them, as it extends from `Magento\Framework\ObjectManager\NoninterceptableInterface`. Therefore, the plugin is not executing as expected because the target class implements `NoninterceptableInterface`. Verified References:

NEW QUESTION # 71

An Adobe Commerce developer is asked to implement a 15% surcharge for all users from a 'Wholesale' customer group. Keeping best practices in mind, what is a correct to accomplish this?

- **A. Declare a new total collector class to calculate the modified total if the current user is in the group, register it in the module's `etc/sales.xml` file, modify the `checkout_cart_index.xml` and `checkout_index_index.xml` layouts to include a new child in the totals block.**
- B. Create an Observer to the `catalog_product_get_final_price` event. Check if the current customer is in the 'Wholesale' group, and if so, retrieve the product from the `$observer->getEventC()` data and Call `$product->setData('final_price', $product->getData('final_price') * 1.15)`.

- C. Create a Cart Price Rule that applies only to the 'Wholesale' group. Specify no conditions for the rule, and in the Actions section, specify for the rule to apply a "Percent of product price discount", with the 'Discount Amount' field set to -15.

Answer: A

Explanation:

The best practice to add a surcharge in Magento is to create a custom total collector that calculates and applies the surcharge. This approach integrates smoothly with Magento's sales and checkout processes.

* Total Collector for Surcharge:

* Creating a new total collector class allows Magento to calculate a custom surcharge and display it in the appropriate sections of the checkout and order summaries.

* Registering this in etc/sales.xml ensures that Magento includes this total during order processing and ensures it's displayed properly on the frontend and backend.

* Why Option A is Correct:

* This approach follows Magento's framework for managing additional charges. It ensures the surcharge is correctly applied and displayed.

* Options B and C involve less maintainable and less integrated approaches. Option B misuses a Cart Price Rule, and Option C uses an observer, which does not fit well with Magento's total calculation architecture.

* Adobe Commerce DevDocs on Custom Total Collectors

* Magento Sales Documentation on Total Calculations

NEW QUESTION # 72

An Adobe Commerce developer is working on a custom gallery extension.

The module uses the `Magento\Catalog\Model\ImageUploader` class for image uploading. The admin controller for custom image uploads is `Vendor\CustomGallery\Controller\Adminhtml\Image\Upload`.

The images need to be stored in different `basePath` and `baseTmpPath` than the default ones.

How can the default imageuploader class be extended and used without affecting the other modules that are already using it?

- A.

1. Create a Virtual Type and configure the `basePath` and `baseTmpPath`.
2. Inject the virtual type `Vendor\CustomGallery\GalleryImageUpload` into admin controller:

```
<virtualType
  name="Vendor\CustomGallery\GalleryImageUpload"
  type="Magento\Catalog\Model\ImageUploader"
>
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</virtualType>

<type name="Vendor\CustomGallery\Controller\Adminhtml\Image\Upload">
  <arguments>
    <argument name="imageUploader" xsi:type="object">
      Vendor\CustomGallery\GalleryImageUpload
    </argument>
  </arguments>
</type>
```

- B.

1. Configure the basePath and baseTmpPath Of Magento\Catalog\Model\ImageUploader.
2. Inject the type Magento\Catalog\Model\ImageUploader into admin controller:

```
<type name="Magento\Catalog\Model\ImageUploader">
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</type>

<type name="Vendor\CustomGallery\Controller\Adminhtml\Image\Upload">
  <arguments>
    <argument name="imageUploader" xsi:type="object">
      Magento\Catalog\Model\ImageUploader
    </argument>
  </arguments>
</type>
```

- C.

1. Create a Virtual Type and configure the basePath and baseTmpPath.
2. Add virtual type Vendor\CustomGallery\GalleryImageUpload as a preference for 'Magento\Catalog\Model\ImageUploader':

```
<virtualType
  name="Vendor\CustomGallery\GalleryImageUpload"
  type="Magento\Catalog\Model\ImageUploader">
  <arguments>
    <argument name="baseTmpPath" xsi:type="string">customgallery/tmp/images</argument>
    <argument name="basePath" xsi:type="string">customgallery/images</argument>
  </arguments>
</virtualType>

<preference
  for="Magento\Catalog\Model\ImageUploader"
  type="Vendor\CustomGallery\GalleryImageUpload"
/>
```

Answer: B

Explanation:

According to the ImageUploader component guide for Magento 2 developers, the ImageUploader UI component gives users the ability to upload images to the Magento Media Gallery. This component is a variation of the FileUploader component and uses the same configuration settings. The ImageUploader component uses the Magento/catalog/Model/ImageUploader class for image uploading, which has properties such as basePath and baseTmpPath that define where the images are stored. To extend the default imageuploader class and use it without affecting the other modules that are already using it, the developer needs to create a virtual type of this class in their module's di.xml file and specify different values for basePath and baseTmpPath. The developer also needs to inject their virtual type into their admin controller using the imageUploader argument. Therefore, option B is the correct answer, as it shows the correct di.xml and controller code to extend and use the imageuploader class. Verified References:

NEW QUESTION # 73

A developer wants to deploy a new release to the Adobe Commerce Cloud Staging environment, but first they need the latest code from Production.

What would the developer do to update the Staging environment?

- A. 1. Log in to the Project Web Interface.
2. Choose the Staging environment, and click Merge
- **B. 1. Log in to the Project Web Interface.
2. Choose the Staging environment, and click Sync**
- C. 1. Checkout to Production environment
2. Use the magento-cloud synchronize <environment-ID> Commerce CLI Command

Answer: B

Explanation:

The developer can update the Staging environment with the latest code from Production by logging in to the Project Web Interface, choosing the Staging environment, and clicking Sync. This will synchronize the code, data, and media files from Production to Staging, creating an exact copy of Production on Staging. The developer can then deploy the new release to Staging and test it before pushing it to Production. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 74

.....

In order to meet the upcoming AD0-E716 exam, we believe you must be anxiously searching for relevant test materials. After all, it may be difficult to pass the exam just on your own, so we're honored you can see this message today because our AD0-E716 Guide quiz can solve your problems. Since inception, our company has devoted itself to studying the proposition outlines of various examinations so as to design materials closely to the contents of these AD0-E716 exams.
