Reliable SC-300 Braindumps Files Exam 100% Pass
| Microsoft SC-300: Microsoft Identity and Access Administrator

The study system of our company will provide all customers with the best study materials. If you buy the SC-300 latest questions of our company, you will have the right to enjoy all the SC-300 certification training materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the [SC-300 Training Materials](#), we can guarantee that our company can provide the newest information about the SC-300 exam for all people.

Microsoft SC-300 certification exam is a great certification for professionals who want to enhance their career in managing identity and access in Microsoft Azure. Microsoft Identity and Access Administrator certification will test your practical skills and knowledge about Azure identity and access management. By passing this certification exam, you can demonstrate your expertise in implementing and managing identity solutions for cloud-based applications. Therefore, if you want to become a Microsoft Identity and Access Administrator, you should consider taking this certification exam.

By passing the SC-300 certification exam, IT professionals demonstrate their expertise in implementing and managing identity and access management solutions in Microsoft environments. Microsoft Identity and Access Administrator certification validates their skills in configuring and managing Azure AD, designing and implementing identity and access solutions, and providing secure access to applications and resources.

100% SC-300 Accuracy - 100% Pass Quiz 2026 SC-300: First-grade Reliable Microsoft Identity and Access Administrator Braindumps Files

BraindumpStudy is the website that has been known to learn IT technology. BraindumpStudy gets high praise from our customers in

real test questions and answers. It is the real website that can help you to pass Microsoft SC-300 certificate. Why is BraindumpStudy very popular? Because BraindumpStudy has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, BraindumpStudy will provide you with more and better certification training materials to satisfy your need.

To prepare for the exam, candidates should have a solid understanding of Microsoft Azure, Microsoft 365, and related technologies. They should also have experience working with identity and access management solutions, as well as experience with implementing security controls and policies in the Microsoft environment. By passing the Microsoft SC-300 Exam, candidates can demonstrate their expertise in managing identity and access in the Microsoft environment, and enhance their career prospects in this field.

Microsoft Identity and Access Administrator Sample Questions (Q99-Q104):

NEW QUESTION # 99

You have an Azure subscription. The subscription contains a virtual machine named VM1 that runs Linux.

You need to configure enhanced security for VM1. The solution must meet the following requirements:

- Ensure that users can sign in to VM1 by using their Microsoft Entra credentials.
- Ensure that users authenticate by using multi-factor out-of-band.
- Prevent users from signing in to VM1 by using passwords.

Which two authentication methods can you include in the solution? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. SMS
- B. Windows Hello for Business
- **C. the Microsoft Authenticator app**
- D. Temporary Access Pass
- **E. FIDO2 security keys**

Answer: C,E

NEW QUESTION # 100

You have an Azure subscription.

Azure AD logs are sent to a Log Analytics workspace.

You need to query the logs and graphically display the number of sign-ins per user.

How should you complete the query? To answer, select the appropriate options in the answer area.

SignInLogs

| where ResultType == 0

| login_count = count() by Identity

extend
print
project
render
summarize

braindumpstudy.com

| columnchart

extend
print
project
render
summarize

Answer:

Explanation:

Explanation

Box 1 =

SigninLogs

| where ResultType == 0

| summarize login_count = count() by identity

| render piechart

This query retrieves the sign-in logs, filters the successful sign-ins, summarizes the count of sign-ins per user, and renders the result as a pie chart.

Box 2 = Render

NEW QUESTION # 101

You have an Azure subscription that contains the resources shown in the following table.

Name	Type
VM1	Virtual machine
App1	Azure App Service
Vault1	Azure Key Vault
storage1	Storage account

You need to grant permissions to the resources by using attribute-based access control (ABAC).

To which resource can you grant permissions?

- A. VM1
- B. storage1
- C. App1
- D. Vault1

Answer: B

NEW QUESTION # 102

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 tenant.

You have 100 IT administrators who are organized into 10 departments.

You create the access review shown in the exhibit. (Click the Exhibit tab.)

Create an access review

Access reviews allow reviewers to attest to whether users still need to be in a role.

Review name * Admin review ✓

Description ○

Start date * 12/18/2020

Frequency Monthly ✓

Duration (in days) ○ 14

End ○ Never End by Occurrences

Number of times 0

End date 01/17/2021

Users

Scope Everyone

Review role membership (permanent and eligible) * Application Administrator and 72 others

Reviewers

Reviewers (Preview) Manager ✓

(Preview) Fallback reviewers ○

Megan Bowen

✓ Upon completion settings

Start

You discover that all access review requests are received by Megan Bowen.

You need to ensure that the manager of each department receives the access reviews of their respective department.

Solution: You modify the properties of the IT administrator user accounts.

Does this meet the goal?

- A. No
- B. Yes

Answer: B

Explanation:

The issue in the exhibit is that all review notifications go to Megan Bowen because she is the fallback reviewer, and the system cannot determine each user's manager. According to Microsoft documentation:

"If you choose 'Manager' as the reviewer type, Azure AD uses the 'manager' attribute from each user's profile. If this attribute is not configured, the fallback reviewer receives the request." By modifying the IT administrator user accounts to assign the correct manager attribute, Azure AD can route each department's review to its corresponding manager automatically. This satisfies the requirement without needing separate access reviews.

Correct Answer: A. Yes

NEW QUESTION # 103

You have an Azure subscription named Sub1 that contains two resource groups named RG1 and RG2. Sub1 contains the users shown in the following table.

Name	Member of
User1	Group1, Group2
User2	Group2
User3	Group3

Sub1 contains the resources shown in the following table.

Name	Type	In resource group
VM1	Virtual machine	RG1
Vault1	Azure Key Vault	RG1
Vault2	Azure Key Vault	RG2

You create the role-based access control (RBAC) role assignments shown in the following table.

Role	Member of	Scope
Reader	Group1	Sub1
Key Vault Secrets User	Group2	RG2
Owner	Group3	RG1

For each of the following statements, select Yes if the statement is true. Otherwise, select No NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can read the contents of the secrets stored in Vault1.	<input type="radio"/>	<input type="radio"/>
User2 can read the contents of the secrets stored in Vault2.	<input type="radio"/>	<input type="radio"/>
User3 can update the configuration of VM1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
User1 can read the contents of the secrets stored in Vault1.	<input type="radio"/>	<input checked="" type="radio"/>
User2 can read the contents of the secrets stored in Vault2.	<input checked="" type="radio"/>	<input type="radio"/>
User3 can update the configuration of VM1.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

No

Yes

Yes

In Microsoft Entra/Azure RBAC, permissions are granted by role + scope and inherit down the hierarchy (subscription # resource group # resource). The SC-300 materials clarify that the Reader role is "a management-plane role that permits viewing resources but not modifying them or accessing data contents." Therefore, although Group1 has Reader at Sub1, User1 (Group1, Group2) cannot read Key Vault secrets in Vault1 because Reader does not grant data-plane access. The study guide also notes for Azure Key Vault with RBAC: "Key Vault Secrets User can read secret contents (get/list) for vaults in the assigned scope." Since Group2 holds Key Vault Secrets User at RG2, any member of Group2 (including User2) can read secrets in Vault2 (which is in RG2). However, that

assignment does not extend to RG1, so it doesn't help User1 with Vault1. Finally, SC-300 coverage of built-in roles states: "Owner grants full access to all resources within the scope, including the ability to modify settings and delegate access." Because Group3 is Owner at RG1, User3 can manage resources in RG1, including updating the configuration of VM1 located there.
Result: User1 # No, User2 # Yes, User3 # Yes.
