JN0-336 Latest Test Braindumps | Guide JN0-336 Torrent

We have installed the most advanced operation system in our company which can assure you the fastest delivery speed on our JN0-336 learning guide, you can get immediately our JN0-336 training materials only within five to ten minutes after purchase after payment. At the same time, there is really no need for you to worry about your personal information if you choose to buy the JN0-336 Exam Practice from our company.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q29-Q34):

NEW QUESTION # 29

You are asked to block malicious applications regardless of the port number being used. In this scenario, which two application security features should be used? (Choose two.)

- A. AppFW
- B. APPID
- C. AppQoS
- D. AppTrack

Answer: A,B

NEW QUESTION # 30

What are two requirements for enabling AppQoS? (Choose two.)

- A. You need an APPID feature license.
- B. You need two SRX Series or MX Series device endpoints.
- C. You need two SRX Series device endpoints.
- D. You need to configure AppQoE for reverse traffic.

Answer: A,B

Explanation:

AppQoE is a feature that enables you to monitor and optimize the quality of experience for applications on your network. It uses application-aware routing and dynamic path selection to choose the best path for each application based on predefined or custom SLA profiles. AppQoE also provides visibility and reporting on application performance and network conditions.

Two requirements for enabling AppQoE are:

You need two SRX Series or MX Series device endpoints: AppQoE can be configured between two SRX Series device endpoints or between an SRX Series device and an MX Series device in a hub-and-spoke or full mesh topology. The devices must run the same version of Junos OS and have the same AppQoE configuration.

You need an APPID feature license: AppQoE requires an APPID feature license to be installed on the SRX Series device. The APPID feature license enables application identification and classification, which are essential for AppQoE to work.

NEW QUESTION # 31

You want to use IPS signatures to monitor traffic.

Which module in the AppSecure suite will help in this task?

- A. APPID
- B. AppFW
- C. AppQoS
- D. AppTrack

Answer: B

Explanation:

The AppFW module in the AppSecure suite provides IPS signatures that can be used to monitor traffic and detect malicious activities. AppFW also provides other security controls such as Web application firewall, URL filtering, and application-level visibility.

NEW QUESTION # 32

Click the Exhibit button.

```
user@host> show chassis cluster status redundancy-group 1
Cluster: 1, Redundancy-Group: 1
Device name    Priority    Status    Preempt    Manual    failover
node0          0          Secondary No          No
node1          200        Primary   No          No
```

Which two statements describe the output shown in the exhibit? (Choose two.)

- A. Redundancy group 1 experienced an operational failure.
- B. Redundancy group 1 was administratively failed over.
- C. Node 0 is controlling traffic for redundancy group 1.
- D. Node 1 is controlling traffic for redundancy group 1.

Answer: C,D

Explanation:

The output indicates that node1 has a priority of 200 and is marked as "Primary," which means it is currently the active node controlling traffic for redundancy group 1. The "Primary" status designates that this node is handling the traffic for the specified redundancy group.

According to the exhibit, node0 is listed with a priority of 0 and is marked as "Secondary." This status indicates that node0 is currently not controlling traffic for redundancy group 1, serving instead in a standby role ready to take over should node1 fail or become unavailable.

NEW QUESTION # 33

Which two statements are correct about Juniper ATP Cloud? (Choose two.)

- A. Once the target threshold is met, Juniper ATP Cloud continues looking for threats from 0 to 5 minutes.
- B. Once the target threshold is met, Juniper ATP Cloud continues looking for threats levels range from 0 to 10 minutes.
- C. The threat levels range from 0-100.
- D. The threat levels range from 0-10.

Answer: C,D

Explanation:

In many threat intelligence and evaluation systems, including Juniper ATP Cloud, the threat levels are often scored on a scale to provide a quick reference of the potential risk associated with a threat. A common range for these threat levels is from 0 to 10, with 0 representing minimal or no threat and 10 representing a severe threat.

Alternatively, some systems may use a more granular scoring system ranging from 0 to 100, providing a more nuanced assessment of threat levels. This range allows for finer differentiation between the levels of threat severity.

NEW QUESTION # 34

.....

Individuals who pass the Security, Specialist (JNCIS-SEC) (JN0-336) certification exam demonstrate to their employers and clients that they have the knowledge and skills necessary to succeed in the industry. BraindumpsPass is aware that preparing with outdated Security, Specialist (JNCIS-SEC) (JN0-336) study material results in a loss of time and money.
