## Pass Guaranteed Quiz FCP\_FGT\_AD-7.4 - FCP - FortiGate 7.4 Administrator –High-quality Vce Free

Are you still worried about the complex FCP\_FGT\_AD-7.4 exam? Do not be afraid. FCP\_FGT\_AD-7.4 exam dumps and

answers from our 2Pass4sure site are all created by the IT talents with more than 10 years' certification experience. Moreover, FCP\_FGT\_AD-7.4 Exam Dumps and answers are the most accuracy and the newest inspection goods.

## Fortinet FCP - FortiGate 7.4 Administrator Sample Questions (Q19-Q24):

### NEW QUESTION # 19

Which two statements are true about the RPF check? (Choose two.)

- A. RPF is a mechanism that protects FortiGuard and your network from IP spoofing attacks.
- B. The RPF check is run on the first reply packet of any new session.
- C. The RPF check is run on the first sent and reply packet of any new session.
- D. The RPF check is run on the first sent packet of any new session.

**Answer: A,D**

Explanation:

RPF protect against IP spoofin attacks. The source IP address is checked against the routing table for a return path. RPF is only carried out on: The first packet in the session, not on reply.

### NEW QUESTION # 20

Which statement about firewall policy NAT is true?

- A. SNAT can automatically apply to multiple firewall policies, based on SNAT rules.
- B. You must configure SNAT for each firewall policy.
- C. DNAT can automatically apply to multiple firewall policies, based on DNAT rules.
- D. DNAT is not supported.

**Answer: B**

Explanation:

C. You must configure SNAT for each firewall policy.

The correct statement about firewall policy Nat (Network Address Translation) is: You must configure SNAT for each firewall policy.

SNAT (Source Network Address Translation) and DNAT (Destination Network Address Translation) are important components of a firewall's policy.

### NEW QUESTION # 21

Which two statements are true regarding FortiGate HA configuration synchronization? (Choose two.)

- A. Incremental configuration synchronization can occur from changes made on any FortiGate device within the HA cluster
- B. Incremental configuration synchronization can occur only from changes made on the primary FortiGate device.
- C. Checksums of devices are compared against each other to ensure configurations are the same.
- D. Checksums of devices will be different from each other because some configuration items are not synced to other HA members.

**Answer: A,C**

Explanation:

"After the initial synchronization is complete, whenever a change is made to the configuration of an HA cluster device (primary or secondary), incremental synchronization sends the same configuration change to all other cluster devices over the HA heartbeat link"

### NEW QUESTION # 22

Refer to the exhibit to view the application control profile.

### Application Category

| Name                         | Category | Technology    | Popularity |
|------------------------------|----------|---------------|------------|
| Application Signature 1/1659 |          |               |            |
| FaceTime                     | VoIP     | Client-Server | ★★★★★      |

Based on the configuration, what will happen to Apple FaceTime?

- A. Apple FaceTime will be allowed, based on the Categories configuration.
- **B. Apple FaceTime will be blocked, based on the Excessive-Bandwidth filter configuration.**
- C. Apple FaceTime will be allowed only if the filter in Application and Filter Overrides is set to Learn.
- D. Apple FaceTime will be allowed, based on the Apple filter configuration.

**Answer: B**

Explanation:

Apple facetime will be blocked according to the "Excessive Bandwidth" filter.

Facetime belongs to VoIP category which is monitored here and therefore should be allowed, however, because of the behavior of the facetime "Excessive-Bandwidth", the custom filter Excessive-Bandwidth will block Facetime and the lookup won't continue to

the second filter.

The excessive bandwidth filter contains facetime and is referenced by the application sensor with the action to block. There is no reference to a bandwidth threshold at which point the filter is applied so the number of calls is irrelevant.

### NEW QUESTION # 23

Which are two benefits of using SD-WAN? (Choose two.)

- A. FortiGate performs per-packet distribution across multiple SD-WAN members.
- B. WAN is used effectively.
- C. Application steering is available.
- D. Firewall policies are not required.

**Answer: B,C**

Explanation:

The two benefits of using SD-WAN are:

B. WAN is used effectively.

SD-WAN optimizes the utilization of Wide Area Network (WAN) resources, improving efficiency and performance in the network.

C. Application steering is available.

SD-WAN provides the capability to steer and prioritize traffic based on the specific applications, ensuring better application performance and user experience.

The other options are not accurate:

A is incorrect because FortiGate typically performs per-session, not per-packet, distribution across multiple SD-WAN members.

D is incorrect because firewall policies may still be required, especially for security and traffic control purposes.

So, the correct choices are B and C.

### NEW QUESTION # 24

.....

Our FCP\_FGT\_AD-7.4 training dumps are highly salable not for profit in our perspective solely, they are helpful tools helping more than 98 percent of exam candidates get the desirable outcomes successfully. Our FCP\_FGT\_AD-7.4 guide prep is priced reasonably with additional benefits valuable for your reference. High quality and accuracy FCP\_FGT\_AD-7.4 Exam Materials with reasonable prices can totally suffice your needs about the exam. All those merits prefigure good needs you may encounter in the near future.
